

Roundwood Removals Survey 2021

You are completing this survey for the Central Statistics Office

The purpose of the Roundwood Removals Survey is to compile statistics on removals of roundwood and roundwood biomass from privately-owned forests in Ireland. The survey results will contribute to meeting EU, industry, and national needs on forestry statistics.

The Roundwood Removals Survey is a statutory statistical survey conducted each year under the provisions of the Statistics (Roundwood Removals Survey) Order 2021 (S.I. No. 112 of 2021).

This questionnaire can be completed by:

- The forest owner
- A forestry consultant or management company on behalf of the owner
- A harvesting contractor on behalf of the owner
- An enterprise that bought standing timber directly from the owner of a small forest should submit data on behalf of the owner e.g. a sawmill buying directly from a farmer

To ensure that all removals are reported only once, please liaise with other persons that could submit information for the same removals.

Roundwood Removals

Please use the following definitions for the roundwood removals questions:

Removals: This term includes all harvesting including thinnings and storm damage.

Quantity: The quantity of roundwood should be given in tonnes overbark. It should include all roundwood removals during the calendar year including thinnings. All weights should be reported at actual moisture content at the time of sale. Please provide both tonnes and cubic metres if both are available.

Large sawlog: Roundwood with a top diameter of 20 cm or more and a typical length of between 3.7 and 7.3 metres. They are used for the manufacture of sawn timber largely for use by the construction industry.

Small sawlog (palletwood): Roundwood with a top diameter of 14-19 cm and a typical length of between 2.0 and 3.6 metres are classified as small sawlog (palletwood). It is suitable for use as packaging and for making garden furniture.

Stakewood: Roundwood with a top diameter of between 7-13 cm and a typical length of between 1.5 and 1.9 metres should be classified as stakewood if it is to be used for stakes and fencing.

Pulpwood: Pulpwood should have a top diameter of between 7-13 cm and with a length of around 3 metres. Pulpwood is used to produce pulp, door panels, particle board, oriented strand board (OSB), medium-density fibreboard (MDF), and other fibreboard. Pulpwood that has been converted to woodchip onsite should be entered in the Woodchip category.

Fuelwood: Wood removals sold for firewood. Please include removals under the *Forestry for Fibre* scheme if the roundwood was removed to be used as fuelwood.

Roundwood purchased for use as biomass: All roundwood removals for energy biomass use should be included in this category. If the roundwood was chipped at the forest then include it under Woodchip. Please include removals under the *Forestry for Fibre* scheme if the roundwood was removed to be used as biomass.

Woodchip: Pulpwood and other woody material that has been converted to woodchip at the forest should be included here. Please include removals under the *Forestry for Fibre* scheme if the roundwood was chipped onsite.

Short rotation coppice: SRC is wood grown for energy purposes e.g. willow.

Other woody material: This category includes brash (lop and top) and tree stumps.

Standing timber value: The standing timber or stumpage value is the gross amount received by the forest owner excluding VAT. This value should **not** be adjusted to account for harvesting, extraction, transportation, and other costs. Please report the data in thousand euro, for example insert 25 for €25,000.

1.1 Coniferous roundwood removals from privately-owned forests in Ireland by or on behalf of your company

The quantity of roundwood should be given in tonnes overbark. It should include all roundwood removals during the calendar year including thinnings. All weights should be reported at actual moisture content at the time of sale. Please provide both tonnes and cubic metres if both are available.
