# Waste statistics in Hungary

*16 October 2024*

# Shared responsibility

- different institutions collecting and disseminating waste data
- close cooperation required
- Ministry of Energy:
  - construction and demolition waste
  - food waste
  - batteries
  - packaging waste
  - electronic waste
  - single use plastic products
  - end-of life vehicles
- Statistical Office (HCSO):
  - municipal solid waste by municipalities
  - public cleaning activities
  - quality control and submission of WStatR data collection

# Municipal waste data collection

- data collection of HCSO
- municipal solid waste collected under public service and on cleaning of public places
- themes: regular activities such as collection, treatment, public area cleaning
- frequency: annual
- coverage: full scope, by settlements
- data providers: about 700 enterprises dealing with waste management
- biggest challenge: change of the legal environment in 2023
- centralized waste management system, public responsibility
- new vs old data suppliers, under-coverage, double-counting
