Environment/climate change statistics

Data collection

Experience of Nepal

Sushil Kumar Sharma

Director

Central Bureau of Statistics Nepal

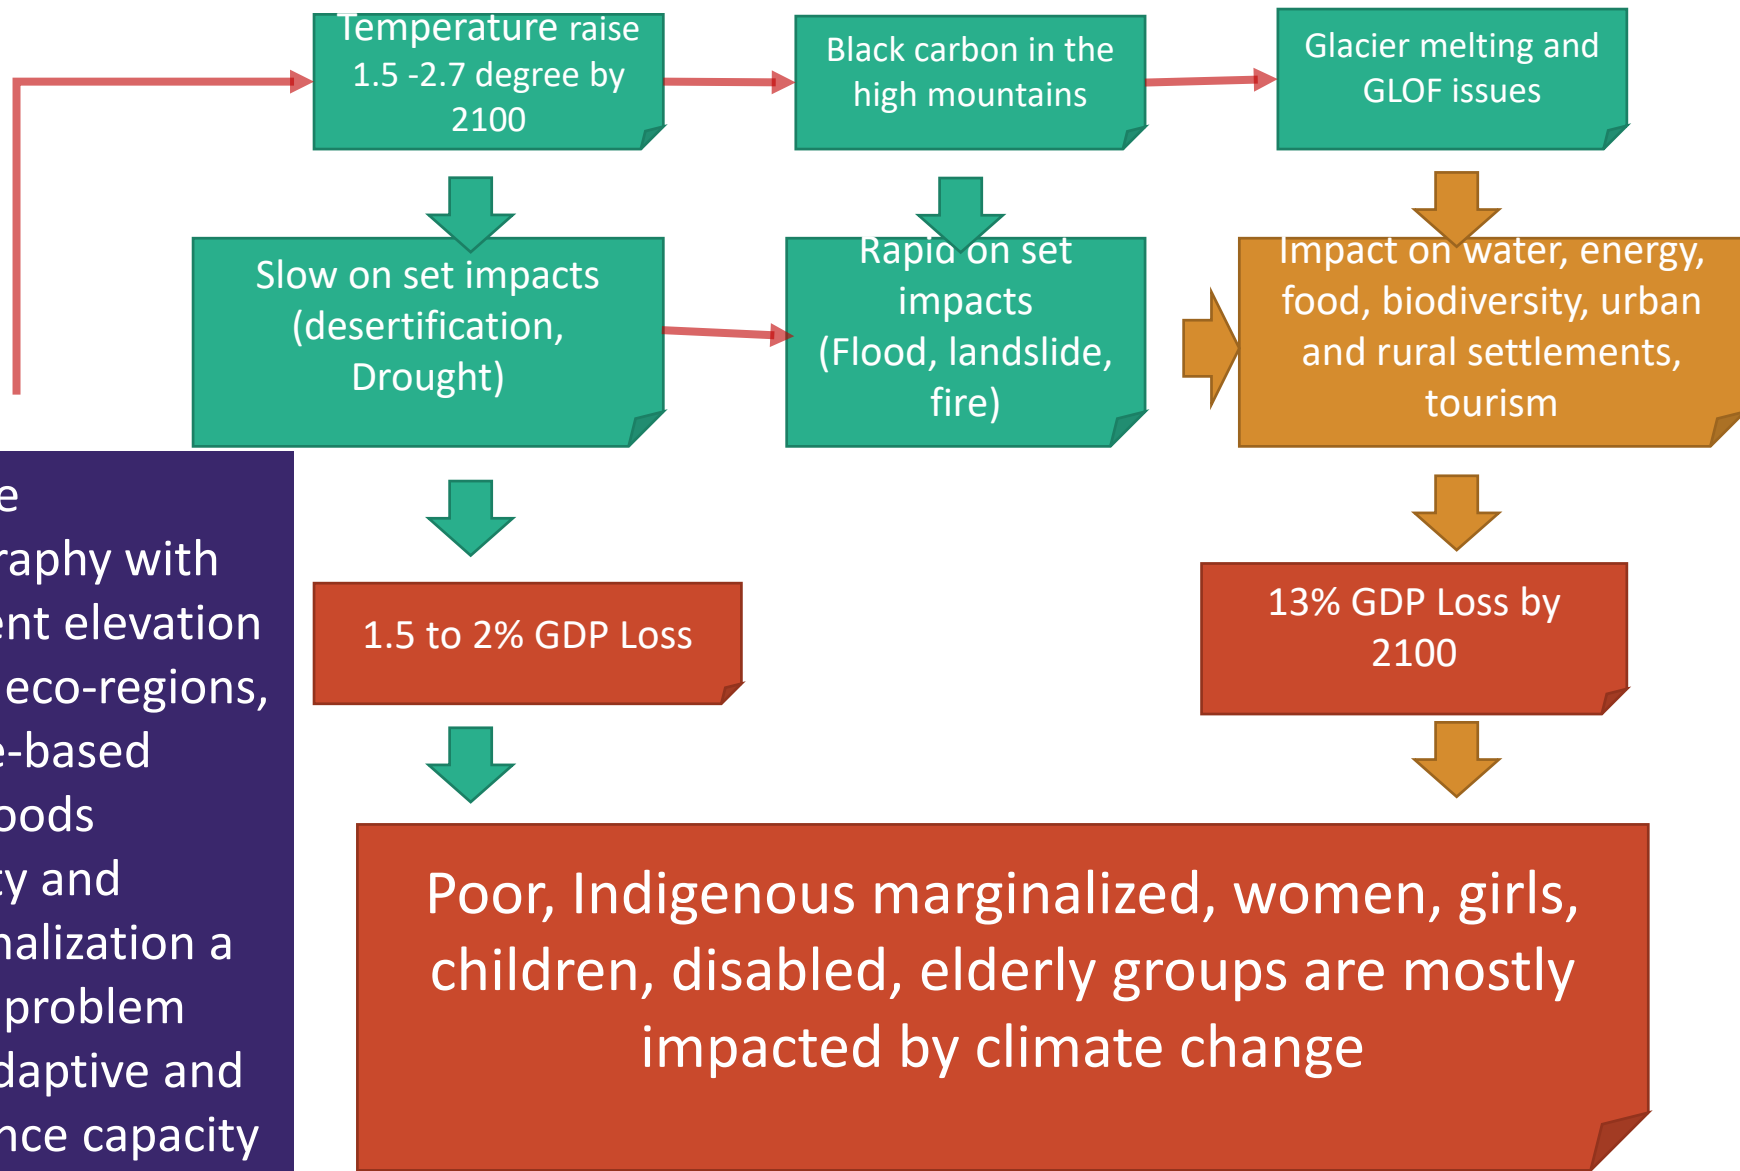

Background

- Nepal is disaster prone country due to topography & climatic condition
- Country is small but having different topography (plain, hill & mountain) and climatic zone
- Earthquakes, landslides, floods, fire, thunderbolts are the major causes of disaster events
- Environmental degradation and climate change both interact with and exacerbate the occurrence and impact of natural hazard events
- Yearly loss of life, property and a significant proportion of Gross Domestic Product (GDP)

Climate Change Issues in Nepal

- Nepal contributes only around 0.027 percent to total global emissions, although it is one of the countries most vulnerable to the impacts of climate change
- Nepal submits its second nationally determined contribution(NDC) document to UN outlining its targets for the next decade to reduce emissions and support vulnerable communities to adapt to the impacts of climate change
- The government strongly believes that these targets can be achieved as they have been set after consultation with various ministries, stakeholders and experts

Climate Impacts in Nepal

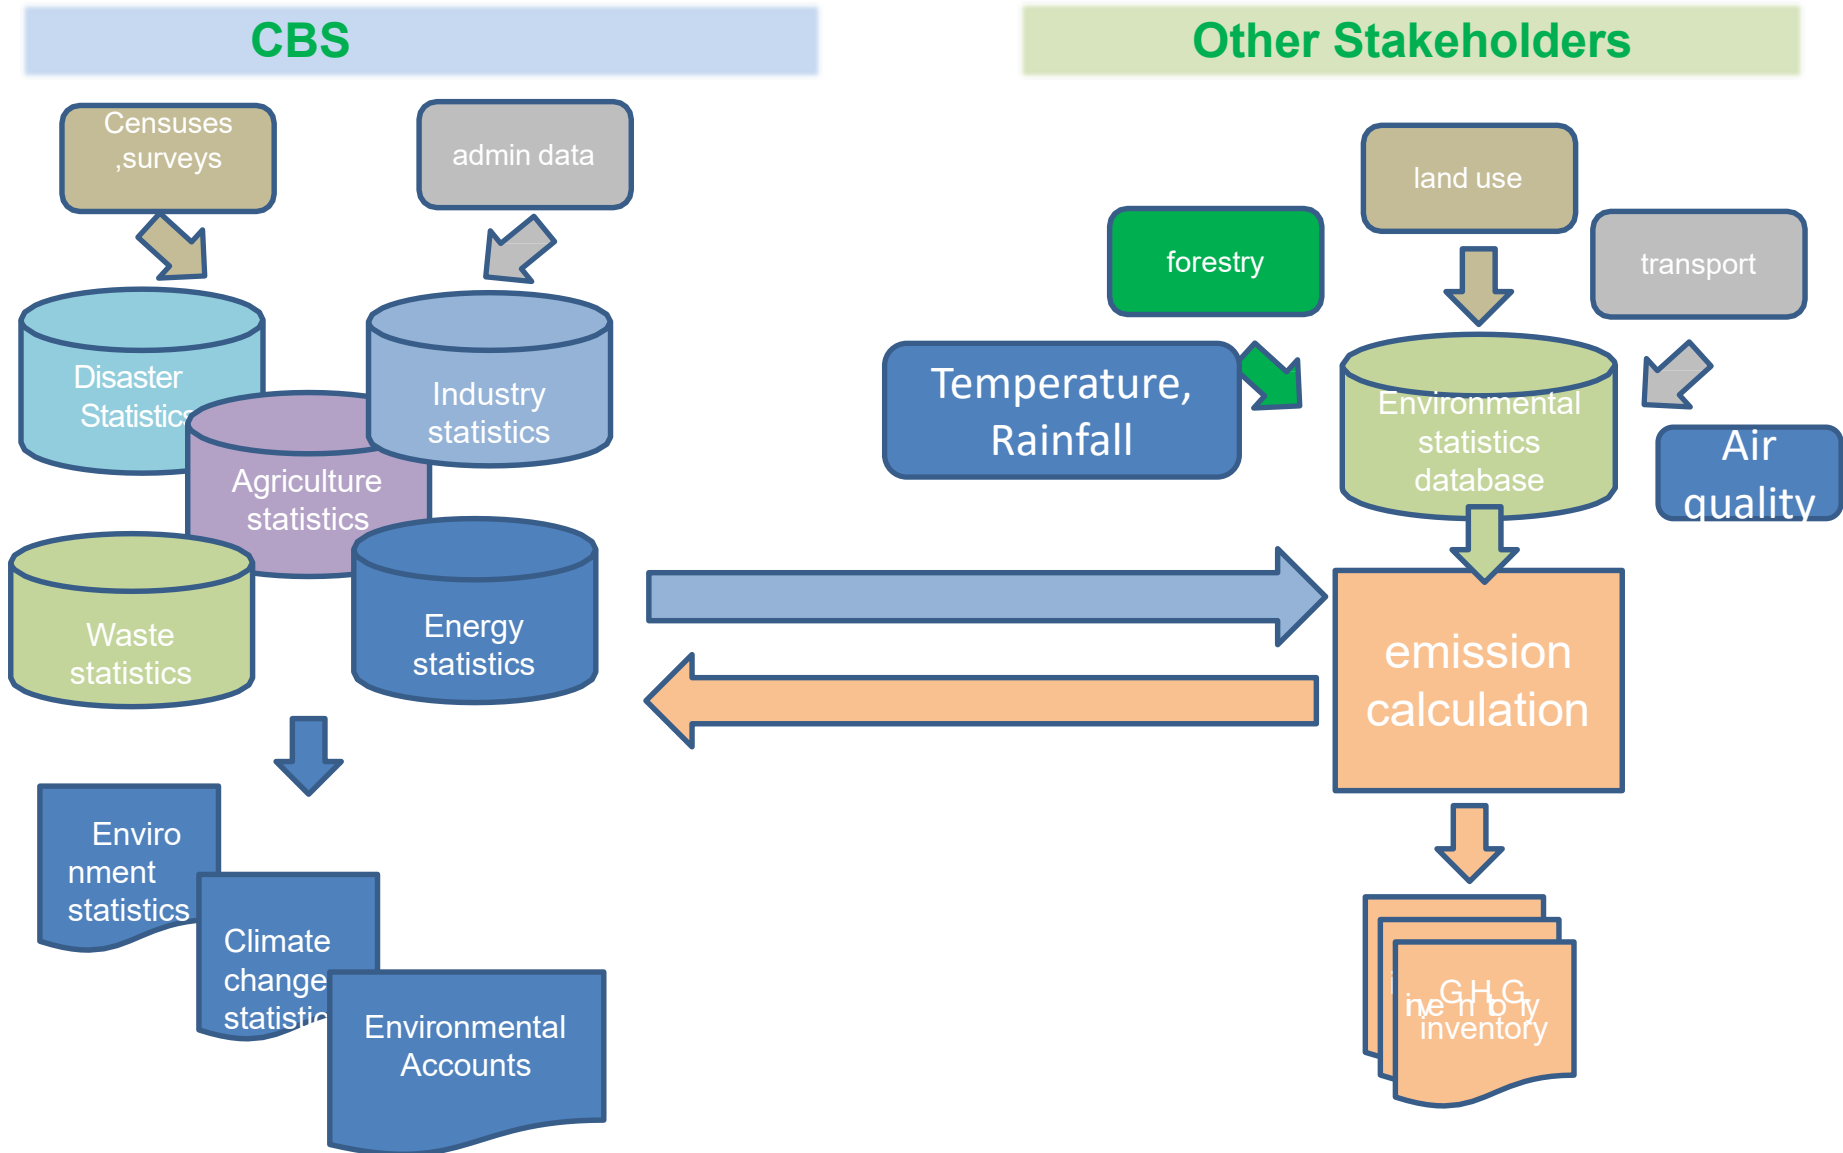

Unique topography with different elevation based eco-regions, nature-based livelihoods
Poverty and marginalization a major problem
Low adaptive and resilience capacity

Poor, Indigenous marginalized, women, girls, children, disabled, elderly groups are mostly impacted by climate change

Current status

- Separate Environment Statistics Section in CBS
- Regular publication of Environment Statistics (Censuses, Surveys, admin data)
- National Climate Change Impact Survey Report, Waste management Baseline Survey Report
- Second Nationally Determined Contribution (NDC) Report (Ministry)
- National Communication Report (Ministry)
- Community questionnaire is added in Population census where one of the thematic area is environment/disaster

National consultation on the draft climate change indicators

Formation of technical committee leading by CBS including from Ministry of Forest and Environment & other stakeholders

- *Meetings conducted and discussed about how we can contribute*

Consultation workshop with stakeholders

- The discussions were made to develop indicators which can respond to main climate change policy questions in an internationally comparable way
- As provisioned in UNSD framework agreed to keep these as five areas to be consistent with the UNSD framework.
- Basically, indicators in Agriculture, Forestry and Other Land Use (AFOLU), Energy, and Waste sectors were discussed in priority on the basis of relevancy of Nepal
- Consensus was made to omit some indicators from global set, which are not relevant in the context of Nepal for example, issues related with ocean and other statistics which were beyond the scope of national assessment

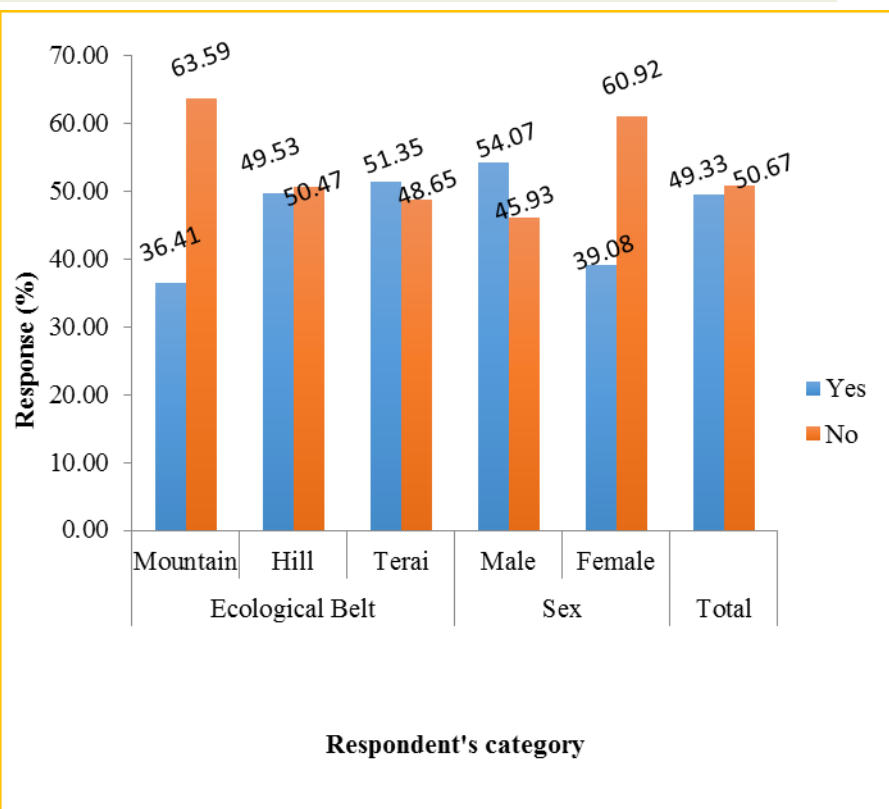

Filled in information in Part 2 of the Global Consultation

Adaptation measures (farm based) adopted in last 25 years

Recent activities

- Shared the prefilled Consultation parts and discussed with the national focal point reporting to UNFCCC
- Conducted technical committee meeting and make a work plan to develop the proposed Nepal specific climate change indicators
- Not possible to conduct the stakeholders workshop but it is planning to conduct when the draft indicators list will be finalized

Environment statistics on population census, 2021

- First time introduce community questionnaire in population census
- Each questionnaire filled in every ward(lowest administrative unit) of Nepal, 6743 wards in Nepal
- One of the module is environment/disaster /hazard
- Milestone for the base line data for disaster mapping and other special environment related surveys

1. Condition of natural disaster and hazard in this area

- ❖ Flood
- ❖ Landslide
- ❖ Soil erosion
- ❖ Inundation
- ❖ Thunderstorm
- ❖ Hailstorm
- ❖ Heavy rain
- ❖ Sporadic rain
- ❖ Heat wave
- ❖ Cold wave
- ❖ Drought
- ❖ Avalanche
- ❖ Forest fire
- ❖ Fire in settlement
- ❖ No hazard

2. Loss of life and property in one year due to disaster/hazard

- How many people died
- How many people injured
- Total number of loss /damage of houses
- Loss of land
- Loss of livestock
- Loss of agricultural product
- Loss of people and property due to wild animals

Environment/climate change/ agro waste statistics on agriculture census 2022 (proposed questions)

- Agro-forestry practiced & area covered
- Soil degradation, types and area of soil degraded
- Soil test
- Tunnel farming under protective cover
- Knowledge of climate change
- Effect and impact of climate change on the agricultural activities
- Management/treatment of agriculture waste
- Percent of crop residues been burnt

Issues and challenges

- Data gaps
- Administrative data is not reporting on time
- Capacity development
- Coordination/collaboration
- Prevailing statistical laws and regulations have not been updated/amended
- Data sharing policy
- Weak statistical infrastructure
- Covid-19 Pandemic (First wave, second wave,)

Expectations & way forward

- Needs special surveys and censuses
- Improved institutional arrangements and structures
- Bilateral and international cooperation for knowledge and technology
- Strengthen data capturing mechanism in province and local governments
- Strengthen Environment Section/GIS of CBS

Thank you !!!
Your comments and queries are highly appreciated !!!
