Example UNSD Water Questionnaire (Table W4) for Costa Rica

- Utilizes existing officially reported volumetric country data in three databanks:
 - UNSD/UNEP Environmental Questionnaire
 - Eurostat / 3. OECD Joint Inland Waters Questionnaire
- Most recent year with the most official reporting was 2015

SDG 6.3.1 WASTEWATER

Only
42
countries

reported statistics on
wastewater generation and
treatment in **2015**

These **limited data** suggest
that about a $\frac{1}{3}$ 
of total or industrial
wastewater **received**
treatment before discharge

Reported total volume of wastewater generated often does not include some sectors of the economy

Does not include irrigation water

Industrial components often incompletely reported

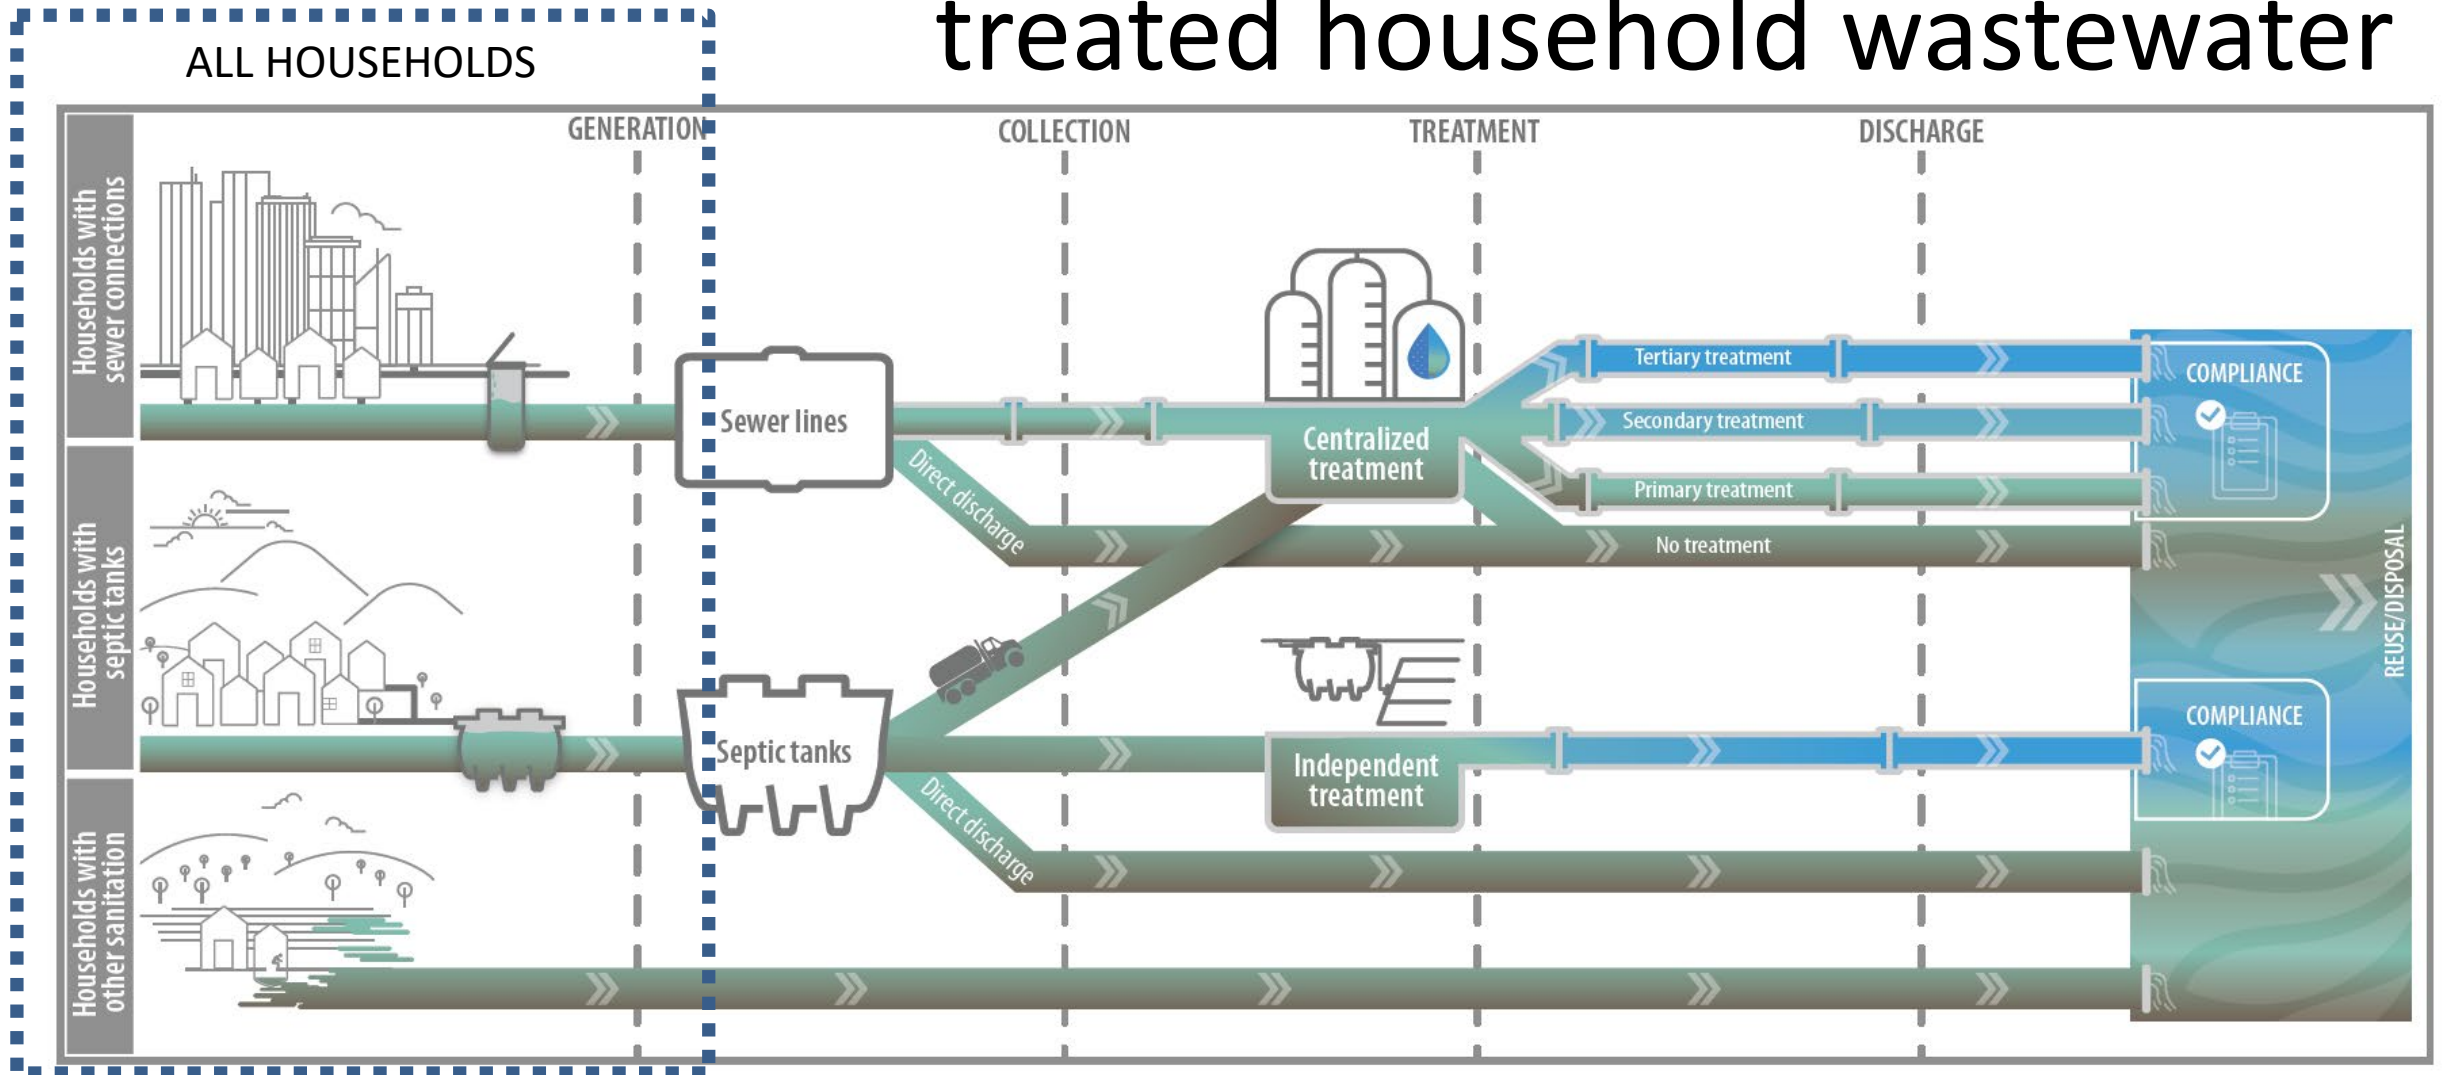

Household Wastewater

Same calculation as total/industrial (safely treated \div generated)...

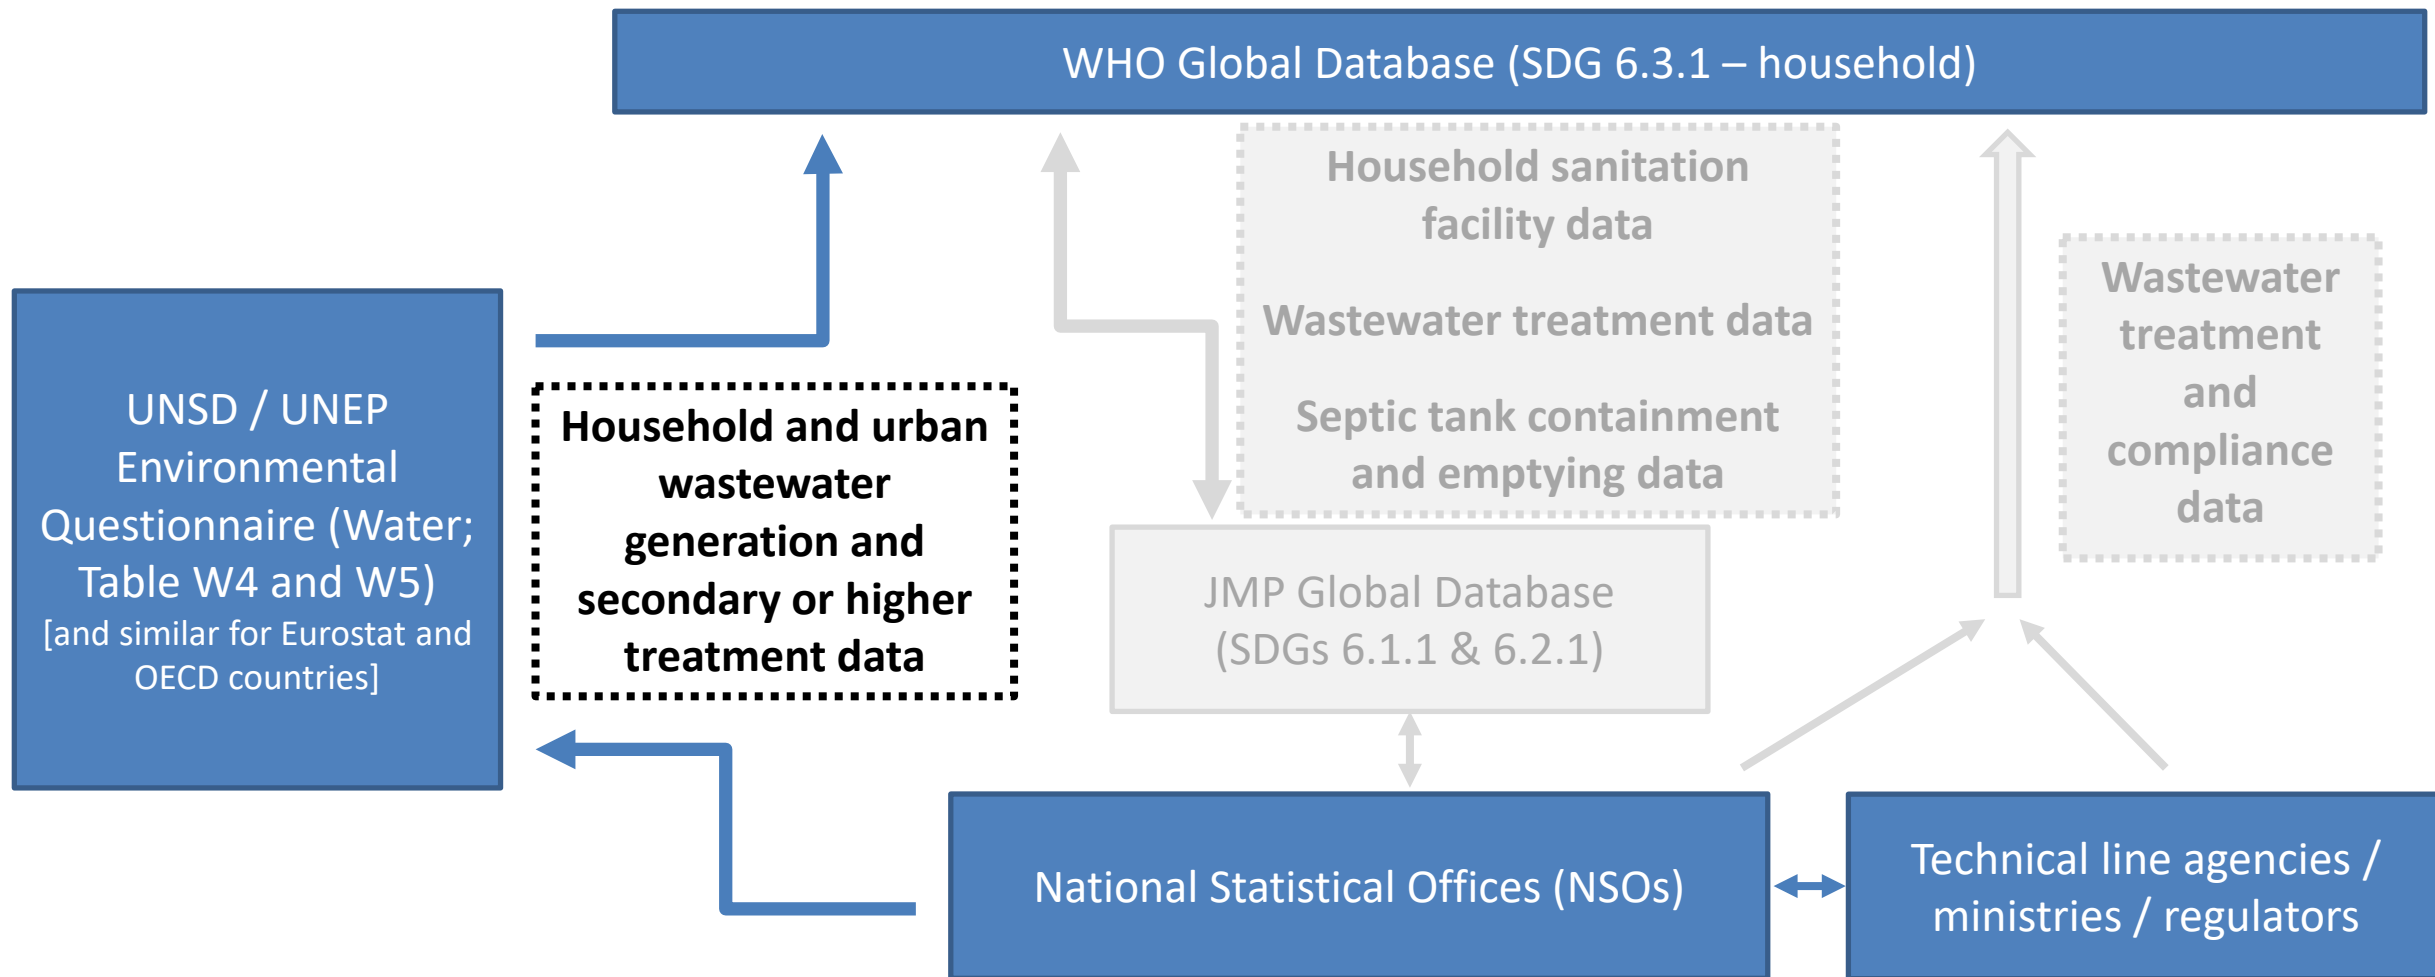

...but more complex methodology

- WHO maintains an internal database for household wastewater
 - Any official data sources can be used (UNSD/UNEP Env Questionnaire is one source)
- Close linkages to the JMP database for SDG 6.2.1 (safely managed sanitation)
- Volumetric data prioritised (but population-based data used as a proxy)
- Default assumptions can be used where nationally representative data are missing, with limitations
 - i.e. 80% of domestic water supply is returned as wastewater

Results – Safely Treated Household Wastewater

Data coverage:

- **128** of 234 SDG countries and territories
- **80%** of the global population
- **87%** of all households wastewater flows

Reporting on SDG Indicator 6.3.1

- First progress report was published in 2018
 - Subsequent reports every 3 years

Priorities and next steps...

- Total/industrial
 - Ongoing country dialogue and data collection
 - Increase data coverage by encouraging official reporting to UNSD/OECD/Eurostat questionnaires
- Household wastewater
