Geographical Names: Relevance and place within the UN-GGIM framework

Greg Scott
Inter-Regional Advisor
Global Geospatial Information Management
United Nations Statistics Division
UN-GGIM: A global initiative

Formal inter-governmental UN Committee of Experts to:

- Discuss, enhance and coordinate Global Geospatial Information Management activities by involving Member States at the highest level. Reports to ECOSOC
- Make joint decisions and set directions on the use of geospatial information within national and global policy frameworks
- Work with Governments to improve policy, institutional arrangements, and legal frameworks
- Address global issues and contribute collective knowledge as a community with shared interests and concerns
- Develop effective strategies to build geospatial capacity in developing countries
UN-GGIM: Why a global mechanism?

- Significant gap in the recognition and management of geospatial information globally
- Lack of a global consultative and decision-making mechanism among Member States in:
  - setting global norms on geospatial information;
  - developing common tools; and
  - bringing geospatial information to bear on global policy issues
- This gap is increasingly being filled by the private sector, reducing the role and influence of Governments
- Governments, not the private sector, have the mandate and accountability to maintain and deliver the national geospatial information base and related policy
UN-GGIM: A global geospatial mandate

At its 47th plenary in July 2011, ECOSOC, recognizing the importance of global geospatial information, established the Committee of Experts on Global Geospatial Information Management (UN-GGIM), and:

- Requested the Committee to present to ECOSOC in 2016 a comprehensive review of all aspects of its work and operations, in order to allow Member States to assess its effectiveness.
- Encouraged Member States to hold regular high-level, multi-stakeholder discussions on global geospatial information, including through the convening of global forums, with a view to promoting a comprehensive dialogue with all relevant actors and bodies.

Resolution

2011/24
Committee of Experts on Global Geospatial Information Management

The Economic and Social Council,

1. Takes note of the report of the Secretary-General on global geospatial information management and the recommendations contained therein;

2. Recognizes the need to promote international cooperation in the field of global geospatial information;

3. Decides, in this regard, to establish the Committee of Experts on Global Geospatial Information Management, in accordance with the terms of reference contained in the annex to the present resolution, to be established and administered within existing resources and organized accordingly, and requests the Committee to present to the Economic and Social Council in 2016 a comprehensive review of all aspects of its work and operations, in order to allow Member States to assess its effectiveness;

4. Encourages Member States to hold regular high-level, multi-stakeholder discussions on global geospatial information, including through the convening of global forums, with a view to promoting a comprehensive dialogue with all relevant actors and bodies;

5. Emphasizes the importance of promoting national, regional and global efforts to foster the exchange of knowledge and expertise, to assist developing countries in building and strengthening national capacities in this field.

Geospatial Information: its importance to governments

“In Namibia a country in which water is a scarce resource…spatial data is only below water in significance”

Minister Alpheus G. !Naruseb, Minister of Lands and Resettlement, Namibia

“We envisage a dynamic Pacific if we can be assisted in implementing the UN-GGIM Resolutions for geospatial information. We need to put in place a solid framework from local to national then regional level”

Tevita Boseiwaqa, Permanent Secretary for Lands and Mineral Resources, Fiji
“...building effective geospatial infrastructures and promoting greater use of geospatial information are part of a new frontier in harnessing science and technology for advancing sustainable development”

Wu Hongbo  
Under-Secretary-General for Economic and Social Affairs  
August 2012
What’s in a name?

Accurate, knowledgeable, consistent, sustained, reliable, standardized, transparent, enduring, agreed, official
What’s in a place?

Building any National Spatial Data Infrastructure requires authoritative national framework data themes. Geographical Names bring context and understanding to the data. They provide “place” to “location”
What’s the problem?

- Geographical names or geospatial information – the challenges, implications and considerations are the same – ‘place’ and ‘location’
- Lack of understanding by users – geonames, geography, maps, education – interface changing
- Traditional use of maps and data – points, lines, polygons, names – no longer conforms
- We are used to order and structure….but the world is becoming less ordered and less structured!!
- Need to move in terms of thinking, institutional arrangements, data usage, dissemination, etc.
- Data is not being fully utilized. New forms of integration and dissemination required
- Conversely, data is being integrated and used in ways we never imagined
UN-GGIM Activities

Significant relevance to UNGEGN

Positioning geospatial information to address global challenges
UN-GGIM: Areas of activity

1. Establishment of regional UN-GGIM entities
2. Future trends in geospatial information management
3. The global geodetic reference frame
4. Determining global fundamental geospatial data themes
5. Trends in national institutional arrangements in geospatial information management
6. Development of a global map for sustainable development
7. Legal and policy frameworks, including critical issues related to authoritative data
8. Implementation and adoption of standards for the global geospatial information community
9. Linking of geospatial information to statistics and other data
10. Developing a shared statement of principles on the management of geospatial information
11. Activities related to sustainable development and the post-2015 development agenda
12. Development of a knowledge base for geospatial information
13. Coordination of UN activities in geospatial information management
Linking geospatial information to statistics
A growing continuum of user needs

Geospatial Community

Geospatial Data Frameworks – Fundamental Elements

Themes:
- Admin. & statistical boundaries
- Addressing, Place Names
- Transport, Water
- Land and Property
- Elevation and Depth
- Imagery
- Positioning

Socio-economic datasets

- Core NSO datasets: Census, Demographics, Agriculture, Building, Labour Force, etc.
- Tax: Income and business tax
- Electoral Role
- Health Services: Medicare, Pharmaceuticals, Medical workforce
- Land Valuation and Land Use
- Social Welfare Services: Unemployment, Disability, Family Support
- Others …

Creating the bridge

Statistical Community

United Nations Initiative on Global Geospatial Information Management

ggim.un.org
United Nations Global Forum on
The Integration of Statistical and Geospatial Information
4-5 August 2014, UN Headquarters, New York

This Global Forum is being convened in conjunction with the 4th Session of UN-GGIM, and is open to National Statistical Organisations, UN-GGIM members, and invited experts

Come and interact with international experts and colleagues from the statistical and geospatial communities on topics including:

- Integration of socio-economic and environmental information using geography
- International standards development to improve geo-statistics
- New developments in geocoding statistics
- How National Spatial Data Infrastructure developments can support statistical operations
- Development of an international statistical – geospatial framework
- Positioning countries for the 2020 round of Population Censuses

Panel sessions will discuss key topics

Positioning geospatial information to address global challenges

ggim.un.org
Global fundamental geospatial data themes

- Positioning (Geodetic)
- Address (Buildings)
- Cadastre (Tenure)
- Names (Gazetteer)
- Water (Hydrology)
- Administrative Boundaries
- Transport
- Bathymetry (Hydrography)
- Land cover (Vegetation)
- Elevation
- Imagery (Satellite & Photo)

Geographical names
- Cadastre, Topographic, Natural Resources and Climate Data
- Land, Island and Submarine Relief
- Coastal, International, State and Municipal Limits
- Geodetic Reference Frame

Future trends in geospatial information management: the 5-10 year vision
Future Trends
Five broad themes identified

- Trends in technology and the future direction of data creation, maintenance and management;
- Legal and policy developments;
- Skills requirements and training mechanisms;
- The role of the private sector and non-governmental sectors; and
- The future role of governments in data provision and management.
The future role of governments in geospatial data provision and management

End-users should be able to consume government-assured geospatial data with the level of trust in quality as they do when they get water from the tap - they are going to get what they expect.
International geospatial standards

- Countries and Governments do not understand and/or appreciate the value of standards.
- Educate decision-makers of the value of standards at the policy level.
- Look at the high level economic value of geospatial infrastructure, standards and interoperability, and the economic benefit.
- White Paper titled “National Mapping Perspective: International Geospatial Standards”
Invitation to briefing on Geospatial Information Technologies  
Tuesday, 6 May 2014

The Permanent Missions of Australia, France, Jamaica and Norway invite you to attend a briefing on the importance of Geospatial Information Technologies.

Speakers:
Mr. Gary Johnston (Moderator)  
Geoscience Australia, Australia

Ms. Anne Joergensen  
Norwegian Mapping Authority, Geodetic Institute, Norway

Mr. Tevita Boseiwaqa  
Department of Lands and Mineral Resources, Fiji

Dr. Zuheir Altamimi  
National Institute of Geographic and Forestry Information, France

Mr. Milton Saunders  
National Land Agency, Jamaica

Tuesday, 6 May 2014, 1:15 to 2:30 pm  
CR E North Lawn Building at the United Nations

Lunch will be provided!

Kindly RSVP within May 4th to emilie.everett@mfa.no
Legal and policy frameworks
National institutional arrangements

Best Practices in Institutional Arrangements

SUREVY AND ANALYSIS
- Review GIM institutional arrangements in Member States
- Identify Gaps

RESEARCH
- What are effective GIM Institutional Arrangements

PREPARE PAPERS
- 2 year work plan
- Technical papers on research findings
- Report for 4th Session of UN-GGIM Committee of Experts
Positioning geospatial information to address global challenges

**Suggested Fundamental Principles**

**INNOVATING**
- Geospatial advocacy
- Collaboration and coordination
- Continuous development and recognition of work
- Agile and adaptive

**GOVERNING**
- Use of and adherence to geospatial standards
- Ownership and accountability
- Transparency
- Respect and confidentiality
- Standards of service

**COMPLYING**
- Sovereignty of Member States
- Adherence to Law
How can you measure and monitor sustainable development...

...without location and geography
Monitoring Sustainable Development: Why Location Matters?
187. We recognize the importance of early warning systems as part of effective disaster risk reduction at all levels in order to reduce economic and social damages including the loss of human life, and in this regard encourage States to integrate such systems into their national disaster risk reduction strategies and plans. We encourage donors and the international community to enhance international cooperation in support of disaster risk reduction in developing countries as appropriate through technical assistance, technology transfer as mutually agreed, capacity building and training programmes. We further recognize the importance of comprehensive hazard and risk assessments, and knowledge and information sharing, including **reliable geospatial information**. We commit to undertake and strengthen in a timely manner risk assessment and disaster risk reduction instruments.

274. We recognize the importance of space-technology-based data, in situ monitoring, and **reliable geospatial information** for sustainable development policy-making, programming and project operations. In this context, we note the relevance of global mapping and recognize the efforts in developing global environmental observing systems, including by the Eye on Earth network and through the Global Earth Observation System of Systems. We recognize the need to support developing countries in their efforts to collect environmental data.
Responsible Governance and Sustainable Development
Suva Statement on Spatially Responsible Governance

Recognizing Small Island Developing States in the Pacific are unique in their situation and with particular vulnerabilities, remain a special case for sustainable development.

Recognize that Voluntary Guidelines on the Responsible Governance of Tenure of Land, Fisheries and Forests outline the principles and practices that governments can refer to when making laws and administering land, fisheries and forest rights, particularly in the administration of tenure and specifically in areas such as the recording of tenure rights, valuation, taxation, spatial planning as well as issues and responses that is required in the recognition and protection of access and rights.

Recognize that the United Nations initiative on Global Geospatial Information Management provides an inter-governmental consultative mechanism on place, locality and geography and plays a leading role in setting the agenda for the development of global geospatial information, infrastructure and its management.

Recognize that key partners of the Global Land Tool Network supported by the Secretariat in UN-Habitat are actively developing pro-poor gender sensitive and scalable land tools in support of the Continuum of Land Rights and alternative forms of secure tenure that include the administering of customary rights.

Recognize that all activities have a geographical and temporal context, and where communities and governments make decisions and organize their affairs through the effective and efficient use of geospatial data, information and services.

Agree that information on geography, custodianship and ownership is foundational for informed decision-making, resilience and sustainability. It is therefore essential that such foundational data and information has authority, currency and is comprehensive, freely available, accessible and usable.

Agree that weak governance hinders sustainable use of the environment, hinders economic growth, can condemn people to hunger and poverty and the loss of lives through violent conflicts.

“Positioning geospatial information to address global challenges”

UN-GGIM | United Nations Initiative on Global Geospatial Information Management

ggim.un.org
Chengdu Forum on Global Geospatial Information Management
15-17 October 2013, Chengdu, China

Development and Applications in Urban Hazard Mapping

Positioning geospatial information to address global challenges
“…there will be a consensus on the vital role of geospatial information in all phases of hazard and disaster risk management and reduction. This will extend the ability for nations to not only map their geography and topography, but also those areas that are vulnerable to natural hazards, particularly in urban environments. It will also provide better understanding to decision-makers and emergency responders”

Wu Hongbo
Under-Secretary-General for Economic and Social Affairs
Chengdu Forum Main Conclusions

1. GI needs to contribute to the post-2015 sustainable development agenda: disaster risk reduction; sustainable development; and the global trend towards urbanization.

2. Provide leadership in raising the awareness and importance of GI in disaster preparedness, mitigation, response and recovery, sustainable development and safeguarding life.

3. Recognize the important role of standards and interoperability when using GI in disaster phases. Need for standardization and terminologies across countries.

4. DRR requires a data driven and a geospatial approach - risk, hazard, exposure, vulnerability, communities, infrastructure at risk, etc. It is also a statistical approach - populations, addresses, postcode, census, village, etc. Need definitive population and economic data to understand exposure and vulnerability.

5. New requirements for combining authoritative information, including access and coordination, with response information from the crowd and citizens, particularly as it applies in rapid response situations.

6. Institutional and policy barriers to data sharing fall away in response to disasters. At other times there are data silos and security concerns. These concerns need to be balanced with the need to make more data available.
The Role of Geospatial Information in Measuring and Monitoring the Sustainable Development Goals
Disaster risk reduction, sustainable development, and global urbanization

- The SDGs will depend on human and physical geography. In order to measure and monitor change and progress you must have access to fundamental and consistent geospatial information - geography.
- Not all targets will be equal and will require different means of measure. Indicators will need to be linked to the targets and be well defined, measurable over time, cost effective and clearly and easily communicated.
- There will be a need to create a network of consistent global data - reliable geospatial information - to measure and monitor trends, change and progress over time in a standardized manner.
Concluding Remarks: Climate change and disaster risk reduction

The inter-connected nature of risks posed by climate change and natural disasters was recognized. Strong actions on climate change mitigation and adaptation are among the most effective means of reducing disaster risks.

Without such actions, the frequency and intensity of, and the vulnerability to, disasters will only intensify in coming years and decades.

There is a need for a range of solutions, including access to technology and early warning systems for disaster management, and enhanced stakeholder capacities at all levels. The role of good governance and incorporation of lessons learned from indigenous knowledge was also recognized.
‘The contribution of geospatial information to the post-2015 development agenda’
