Naming Principles

Ferjan Ormeling

NAMRIA-UNGEGN international
toponymy course, Manila 2018

We give names in order to have labels for geographical objects

Why do we name? In order to make sense of our environment

Cow + ford = couford > couver

Lord of Couver = van Couver = Vancouver

=name of British navy officer that discovered Vancouver

We give names

- In order to be able to have labels for geographical objects.
- That is much more important than the semantic meaning of the names
- We give names to point, linear, area- and 3D-objects on the Earth's surface

What do we name:

- Rivers and lakes
- Mountains
- Settlements
- Roads, bridges, etc
- Bays, gulfs, capes
- Polders, huertas
- Estates
- Administrative areas
- Regions
- Islands
- Fields
- Houses, farms
- Slopes

Names - objects were named for:

Descriptive names

- Based on shape
- Vegetation and fauna
- Local events
- Directions
- Configuration
- Circumstances
- Catering
- Occupations

Non-descriptive names

- Religious calendar
- Conceptual names
- Commemorative names:
 - ◆ Ships
 - ◆ Explorers
 - ◆ Sponsors
 - ◆ Home towns
 - ◆ institutions

Names mostly start as descriptive names

- So first names mostly are transparent.
- Later, because knowledge of the (initial) language disappears, they may become opaque

Nature of the name:

- Specific part
- Generic part
- Possible transfer to other objects (false generics)

The relationship between specific and generic name parts may indicate:

- nature
- property
- purpose
- events

What is expressed in geographical name? Relationships between x and y

- X with/of Y: Thabazimbi (mountain with iron)
- X resembles Y: Vaal River (river like the colour grey)
- X belongs to Y: Simon's Town (Town of Simon)
- X at Y: Barkley East (Barkley in the East)
- X for Y: Signal Hill (hill for signalling)
- X where Y happened: Rustenburg (town where they rested)

(after Meiring, 1993)

These relationships might be expressed in place names because specific events happened there:

- Physical
- Physiological
- Sensory
- Emotive
- Intellectual
- Communicative
- Social
- Controlling
- Movement
- Impact
- Transfer

Names might be

- Simplex: Hawaii, Oslo, Pretoria, Enschede
- Complex: Port Elizabeth, al-Qahira, New York, Frankfurt am Main

Apart from establishing relationships or memorizing events, names do more:

They have/provide connotations!
(descriptive backing):

What do you think of when you
hear the name

Hawaii,

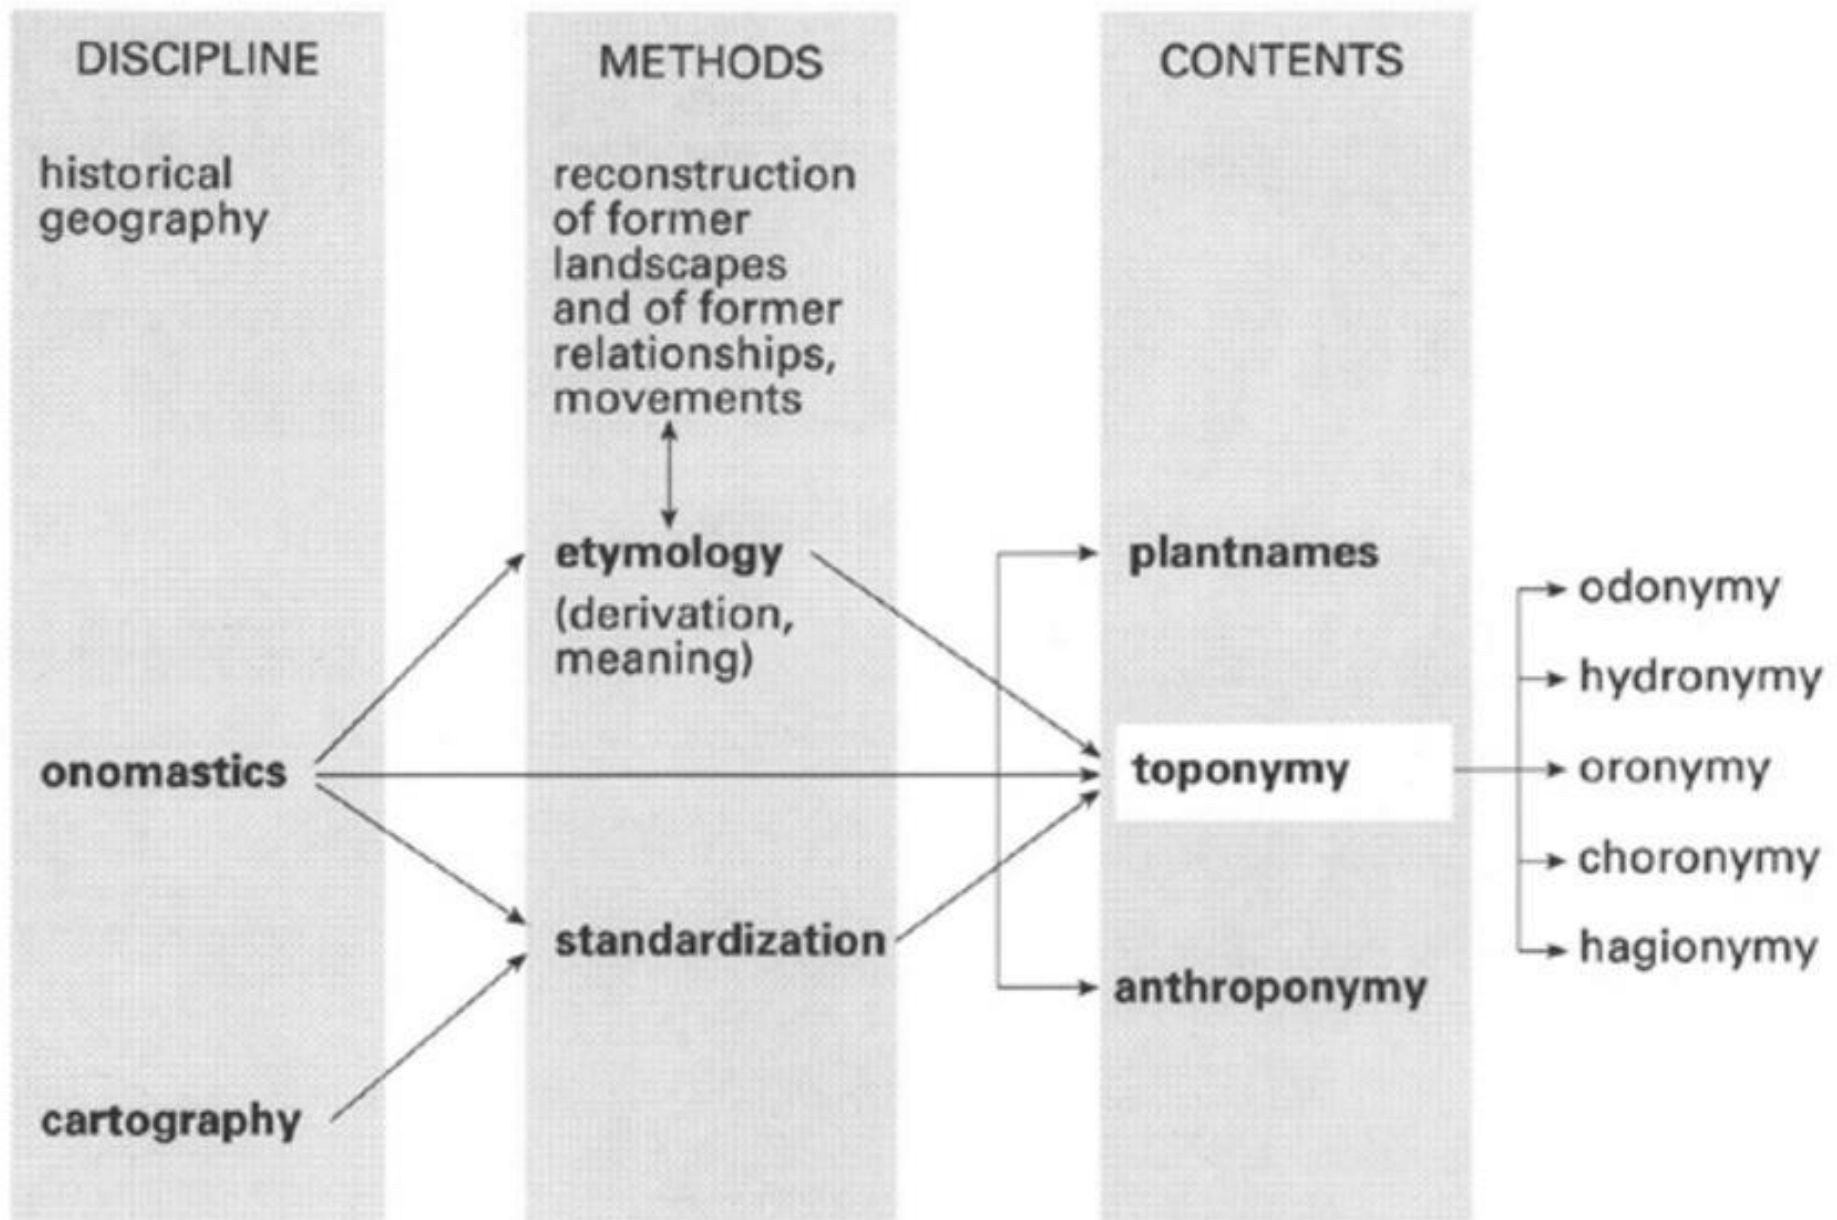

New York,

Gaza Strip

Pernambuco?

Names do more (2)

Names provide boundaries: in an urban environment street names are grouped in themes, so that when a person hears a street name, she recognises the theme and will know where to go

Historical aspect:

Names tell us something about:

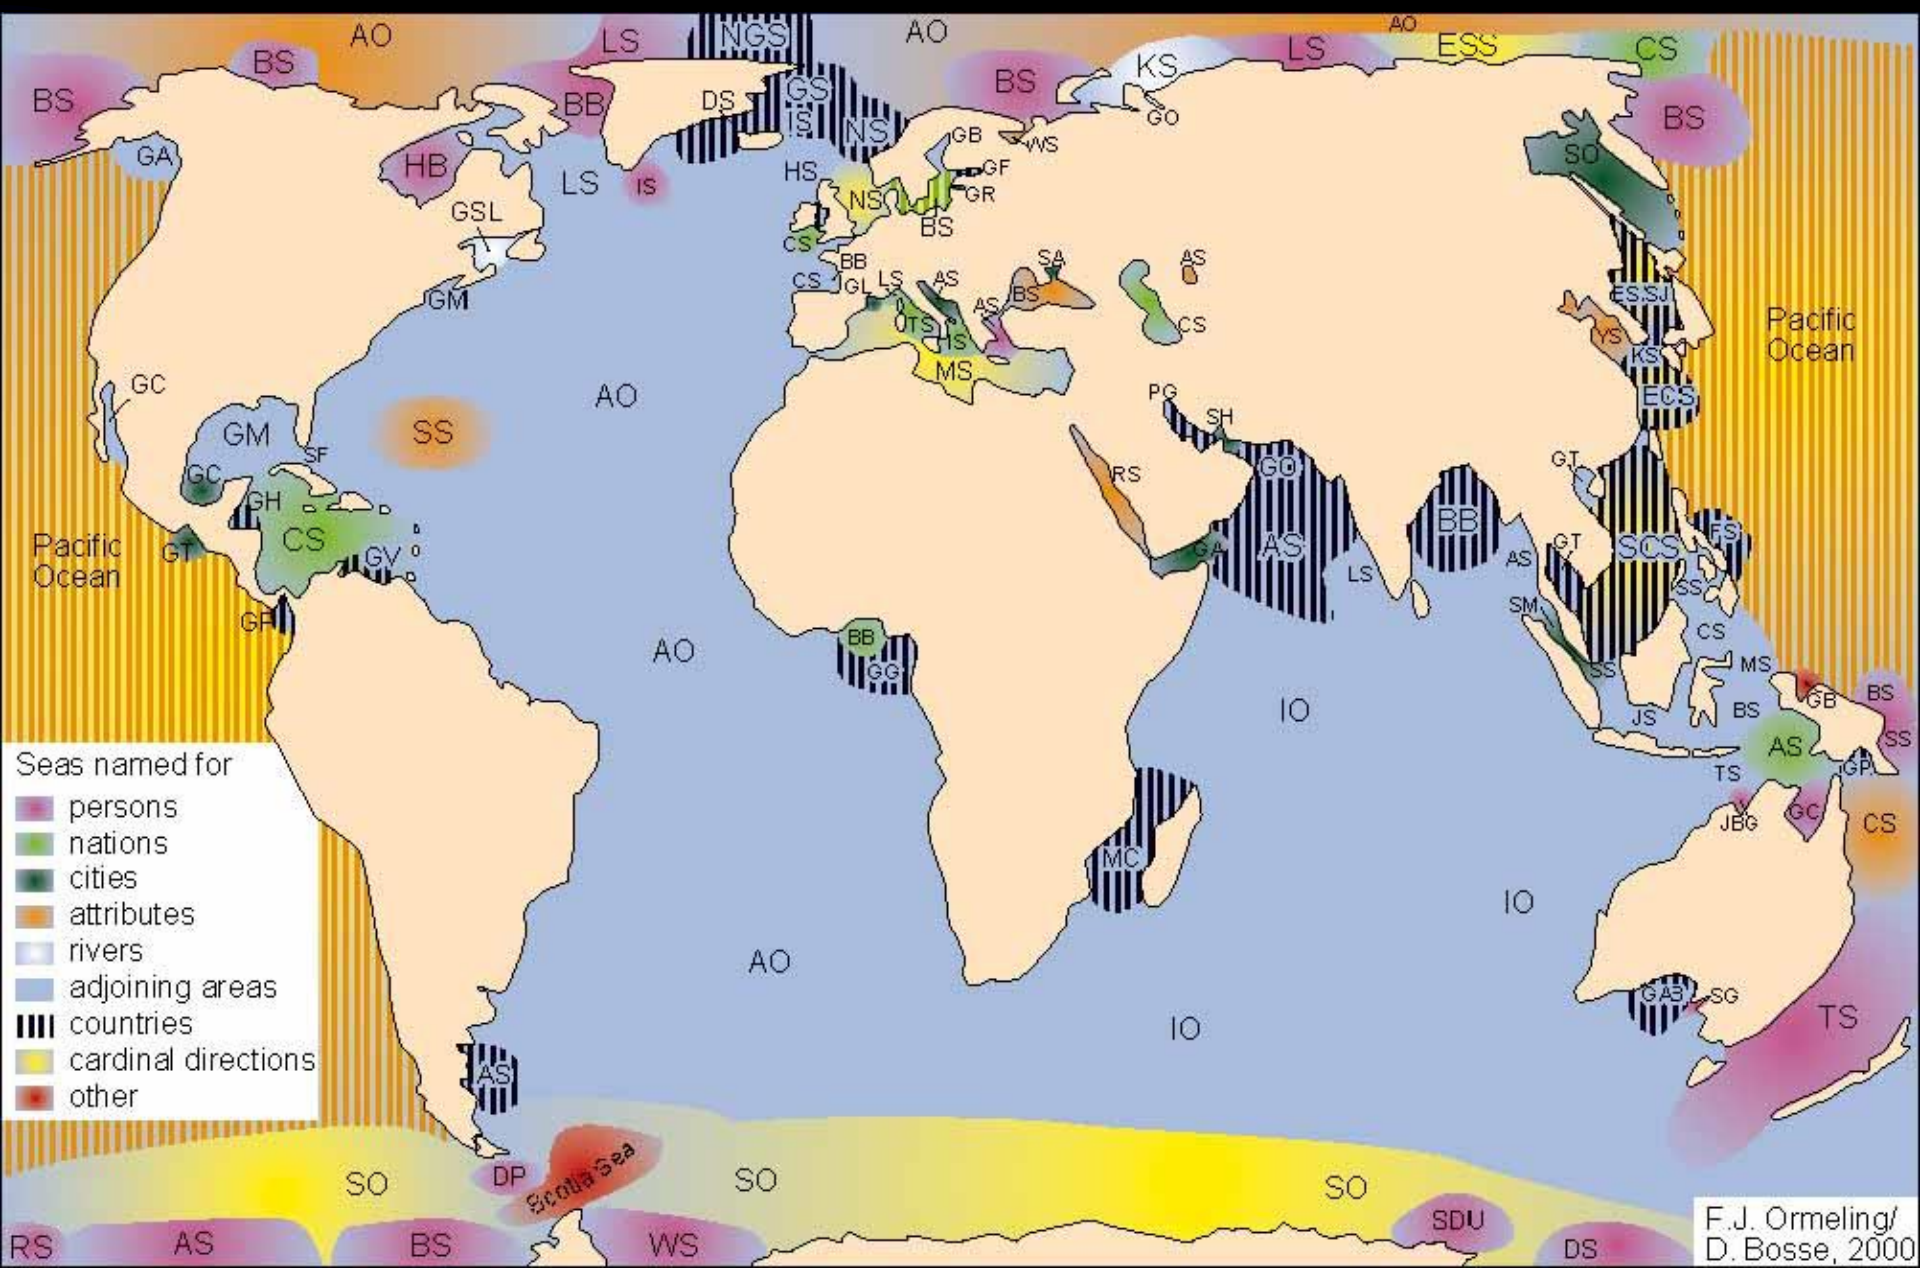

- The nature of the entity named when the name was given
- The nature of the society that provided the name: its attitude towards nature

Names ending in –burg: 7th-9th century
Names ending in –donk: after 10th cent.
Names ending in –dam: after 13th cent.

Just as for Christian names, we also see trends in place names
