

Plan on establishment of National Committee Geographical Name and Spatial Data Infrastructure in Viet Nam

**Do Thi Thu Thuy
Department of Survey and Mapping of Viet Nam
Ministry of Natural resources and Environment**

Abstract

The Vietnamese government is implementing the e-government Program, which has established as an effective mechanism for increasing government productivity and efficiency and a key enabler of citizen centric services.

To achieve the above policy, NSDI will be one of the core data platform enables sharing, accessing and management of natural and artificial objects by geographic location, which will enhance efficiency in policy/decision making of the Local and Central government. In this context, Vietnamese government has assigned the Ministry of Natural Resources and Environment to prepare plan on establishment of National Committee on Geographical Name and Spatial Data Infrastructure. The presentation will deliberate on this plan. The role of Department of Survey and Mapping of Viet Nam that contributes some of the core geospatial data for NSDI of Viet Nam, will be included.
