

## 1. GAZETTEER OF THE NETHERLANDS

&lt;previous - next&gt;

Frontispiece of Gazetteer of the Netherlands, based on map series 1:50 000

This gazetteer contains the names, their feature codes, their geographical co-ordinates (longitude, latitude), their UTM references, an administrative code (the letters refer to the provinces of the Netherlands), a reference to the map sheet and edition the names were taken from and a column for remarks. The following feature codes are used:

#### CODE

This column contains a specific code of maximally four letters which provides a further specification of the nature of the particular feature. It occasionally proved difficult to draw a sharp distinction between the names of polders and area names. The category 'polder' therefore includes all those names in which the word 'polder' occurs. In addition, this category also includes the names of drained lakes which are clearly visible as a landscape unit on the map, such as Schermer, Flevoland, etc.

Where no recognizable feature can be discerned from the topography, the name is coded as an area or local name.

The explanation of the 40 codes used is as follows:
