

Update on National Activities in Gender Statistics: MEXICO

IAEG-GS New York
October 4-6, 2011

Publications

- “Men and Women in Mexico”. Within information from a variety of sources.
- Data from the Economic Census and Establishment Surveys with a gender perspective.

Household Income and Expenditure Survey (ENIGH 2010)

- The ENIGH 2010 included questions that allowed for the disaggregation of household expenditures by gender in the following categories: personal care, education, culture and recreation, clothing and shoes, and health.
- The ENIGH 2010 questionnaire also modified its time use questions to make them comparable to those used in the Time Use Survey (ENUT 2009). With a clear understanding of the differences in objectives of both instruments..

Household Expenditure Continuous Survey (ENGASTO)

- The data collection of this survey will be all year.
- One of its objectives is to collect information to update the basket of goods used to estimate the consumer price index.
- It will have questions to differentiate gender specific expenditures in personal care, education, culture and recreation, clothing and shoes, and health.

Time Use Survey (ENUT 2009)

- This survey collects time use information for the population 12 and older. It gathers data on all daily activities and provides the necessary inputs to measure all forms of individual labor, including remunerated and non-remunerated work in the household.
- One of its objectives is to allow to estimate the value of non-remunerated household work and the distribution of household chores between men and women.
- It also provided information to estimate the value of voluntary work.

Demographic Dynamics Survey (ENADID 2009)

- Its objective is to generate information on the components of demographic dynamics: fertility, mortality and migration.
- It has a module for women between 15 and 54 years of age. Which includes questions on fertility, birth control methods (knowledge and use), maternal health.

Intrahousehold Relationship Dynamics (ENDIREH 2011)

- The general objective of the survey is to produce statistical information on the frequency and magnitude of partner violence, as well as violence against women in the work place, school and the community.
- Generate information to estimate the prevalence of partner violence within the household.
- Estimate the prevalence of violence (emotional, physical, economic and sexual) against women 15 years and older by their partners.
- Provide information on the socioeconomic situation of women and the sociodemographic characteristics of their households and their members.

Pilot Survey on the Provision of Care Services by Women (2011)

- Done in cooperation with the Inter American Development Bank (IDB).
- It focuses on the provision of care services by women to other household members (sick, with disabilities and children).
- The labor market participation of women who provide care services in their households.

Satellite Account on Non-remunerated Household Work

- One of its main data sources is the time use survey.
- Its general objective is to provide an economic value to the non-remunerated household work performed by individuals in their own households.
- Estimated at 21.8% of GDP in 2009. Of which 76.6% is the contribution of women.
