

The Department of Economic and Social Affairs of the United Nations Secretariat is a vital interface between global policies in the economic, social and environmental spheres and national action. The Department works in three main interlinked areas: (i) it compiles, generates and analyses a wide range of economic, social and environmental data and information on which States Members of the United Nations draw to review common problems and to take stock of policy options; (ii) it facilitates the negotiations of Member States in many intergovernmental bodies on joint courses of action to address ongoing or emerging global challenges; and (iii) it advises interested Governments on the ways and means of translating policy frameworks developed in United Nations conferences and summits into programmes at the country level and, through technical assistance, helps build national capacities.

NOTE

The designations employed and the presentation of material in this publication do not imply the expression of any opinion whatsoever on the part of the United Nations concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries. Where the designation "country or area" appears in the headings of tables, it covers countries, territories, cities or areas. The designation "developed" and "developing" economies which appears in some tables is intended for statistical convenience and does not necessarily express a judgement about the stage reached by a particular country or area in the development process.

Le Département des affaires économiques et sociales du Secrétariat de l'Organisation des Nations Unies sert de relais entre les orientations arrêtées au niveau international dans les domaines économiques, sociaux et environnementaux et les politiques exécutées à l'échelon national. Il intervient dans trois grands domaines liés les uns aux autres : i) il compile, produit et analyse une vaste gamme de données et d'éléments d'information sur des questions économiques, sociales et environnementales dont les États Membres de l'Organisation se servent pour examiner des problèmes communs et évaluer les options qui s'offrent à eux; ii) il facilite les négociations entre les États Membres dans de nombreux organes intergouvernementaux sur les orientations à suivre de façon collective afin de faire face aux problèmes mondiaux existants ou en voie d'apparition; iii) il conseille les gouvernements intéressés sur la façon de transposer les orientations politiques arrêtées à l'occasion des conférences et sommets des Nations Unies en programmes exécutables au niveau national et aide à renforcer les capacités nationales au moyen de programmes d'assistance technique.

NOTE

Les appellations employées dans cette publication et la présentation des données qui y figurent n'impliquent de la part du Secrétariat de l'Organisation des Nations Unies aucune prise de position quant au statut juridique des pays, territoires, villes ou zones, ou de leurs autorités, ni quant au tracé de leurs frontières ou limites. L'appellation "pays ou zone" figurant dans certaines rubriques des tableaux désigne des pays, des territoires, des villes ou des zones. Les appellations économiques "développées" et "en voie de développement" qui figurent dans certains tableaux sont utilisées pour plus de commodité dans la présentation des statistiques et n'impliquent pas nécessairement un jugement quant au stade de développement auquel est parvenu un pays ou une zone donnée.

Statistics Division of the United Nations
 New York
 30 December 2010

Division de statistique des Nations Unies
 New York
 Le 30 décembre 2010

Introduction

This publication presents current monthly economic statistics for most of the countries and territories of the world. In addition, each month a selection of tables shows annual and/or quarterly data on subjects illustrating important economic trends and developments.

All data published in this edition are available in electronic format in the online version of the *Monthly Bulletin of Statistics* (MBS Online, see <http://unstats.un.org/unsd/mbs/>). The MBS Online may present longer time series than can be shown in the print version as well as several additional statistical series. Those online series which are currently not included in the print version are: Gross domestic product, volume measures; Retail trade indices; and World food situation, FAO food price index.

Sources

The statistics appearing in the *Bulletin* are obtained by the Statistics Division of the United Nations and the international statistical services from official sources in the countries. International sources for the *Bulletin* include the Food and Agriculture Organization of the United Nations, International Civil Aviation Organization, International Civil Service Commission, International Labour Office and the International Monetary Fund.

To access countries' or areas' national statistical office websites for more information, consult http://unstats.un.org/unsd/methods/inter-natlinks/sd_natstat.asp.

Comparability of the data

Data definitions are provided for the statistical terms in the tables. These present the internationally recommended statistical terms and definitions in current use. Where individual series differ fundamentally from the descriptions in the note, the differences are indicated in footnotes.

Where a significant break in the homogeneity of a particular national series occurs, the point at which the break occurs is indicated by the symbol “#”, or by a vertical line drawn across the column; the nature of the change is generally described in a footnote.

Revisions and changes in tables

Each issue contains all the revisions made in the figures up to the date of publication of the *Bulletin*. In general, figures for the latest months are to be regarded as provisional.

Table 4 has been suspended pending implementation of ISIC Rev.4.

Time period

The statistics are presented in the form of time series. As far as possible the figures are given for the calendar years 2000-2009 inclusive and for the most recent 18 months. In general, the annual figures are expressed as monthly averages; exceptions (e.g. most of the tables under the International Merchandise Trade and Finance Sections) are indicated. For the registration of new motor vehicles, annual and quarterly totals are shown.

Introduction

Cette publication présente des statistiques économiques mensuelles à jour pour la plupart des pays et territoires du monde. En outre, on y trouve chaque mois une série de tableaux qui contiennent des données annuelles et/ou trimestrielles sur des sujets qui illustrent les principales tendances et développements économiques.

Toutes les données publiées dans ce numéro sont disponibles en format électronique dans la version en ligne du *Bulletin mensuel de statistique* (BMS en ligne, disponible à : <http://unstats.un.org/unsd/mbs/>). En ligne, le BMS permet des séries chronologiques/ temporelles plus longues (que sur la version imprimée), ainsi que l'addition de séries statistiques supplémentaires. A présent, les séries absentes de la version imprimée sont les suivantes: le produit intérieur brut, les mesures de volume, les indices du commerce de détail, la situation alimentaire mondiale, et l'indice FAO de prix des produits alimentaires.

Sources

Les statistiques publiées dans le *Bulletin* ont été obtenues par la Division de statistique des Nations Unies et par les services statistiques internationaux de sources officielles dans les pays. Les sources internationales pour le *Bulletin* incluent la Commission de la fonction publique internationale, l'Organisation des Nations Unies pour l'alimentation et l'agriculture, l'Organisation de l'aviation civile internationale, le Bureau international du travail et le Fonds monétaire international.

Pour accéder aux sites web des offices statistiques nationaux pour plus d'information, consultez http://unstats.un.org/unsd/methods/inter-natlinks/sd_natstat.asp.

Comparabilité des données

Les définitions des données sont fournies pour les termes statistiques dans les tableaux. Elles présentent des termes et définitions recommandés internationalement qui sont d'usage courant. Lorsqu'une série s'écarte de manière fondamentale de la définition donnée dans la remarque, la divergence est signalée en note.

S'il y a discontinuité dans l'homogénéité d'une série statistique d'un certain pays, le point où se produit la coupure est indiqué par le signe “#” ou par une barre verticale ; la nature de changement est généralement mentionnée en note.

Révisions et changements dans les tableaux

Chaque numéro contient toutes les rectifications apportées aux chiffres à la date de la publication du *Bulletin*. En général, les chiffres des derniers mois doivent être considérés comme provisoires.

Le tableau 4 a été suspendu en attendant l'implémentation de CITI Rév.4.

Période couverte

Les statistiques sont présentées sous forme de séries chronologiques. Autant que possible, les chiffres donnés sont des chiffres annuels pour 2000-2009 et des chiffres mensuels

Units of measurement

Metric units are used in all tables in which the data are measured in weight, volume, length or area. The principal British and United States equivalent units are given in Annex I to this issue.

Rounding of figures

When necessary, figures are rounded off to the nearest final digit. For this reason, there may be an apparent slight discrepancy between the sum of the constituent items and the total as shown in some series.

Symbols employed

The following symbols have been used throughout the *Bulletin*.

| | |
|------|---|
| . | Not applicable. |
| ... | Not available. |
| — | Magnitude zero. |
| 0 | Magnitude not zero, but less than half of unit employed. |
| 0.0 | Magnitude not zero, but less than one tenth of unit employed. |
| C | Confidential data |
| * | Provisional, preliminary or estimated figure. |
| x | United Nations estimate. |
| ◆ | Monthly average for quarter or index for quarter. |
| # or | Marked break in series. |

Decimal figures are always preceded by a period (.).

Country nomenclature

Designations which have changed in recent years:

China — For statistical purposes the data for China do not include Hong Kong Special Administrative Region (Hong Kong SAR), Macao Special Administrative Region (Macao SAR) and Taiwan province of China.

China, Hong Kong SAR — Pursuant to the Joint Declaration signed on 19 December 1984, the United Kingdom restored Hong Kong to the People's Republic of China with effect from 1 July 1997; the People's Republic of China resumed the exercise of sovereignty over the territory with effect from that date.

China, Macao SAR — Pursuant to the Joint Declaration signed on 13 April 1987, Portugal restored Macao to the People's Republic of China with effect from 20 December 1999; the People's Republic of China resumed the exercise of sovereignty over the territory with effect from that date.

pour les derniers dix-huit mois. En général, les chiffres annuelles sont présentées en moyennes mensuelles; il y a des exceptions qui ont été marquées (ex. la plupart des tableaux dans les sections sur le commerce international et sur la finance). Pour l'immatriculation des véhicules automobiles neufs, les totaux annuels et trimestriels sont présentés.

Unités de mesure

Le système métrique est utilisé dans tous les tableaux dont les données sont mesurées en poids, volume, longueur ou surface. Une liste des principaux équivalents des unités métriques en unités anglaises et des États-Unis figure à l'Annexe I du présent numéro.

Arrondissement de chiffres

Chaque fois qu'on l'a jugé nécessaire, les nombres ont été arrondis à l'unité. Il peut donc y avoir, pour certaines séries, une légère différence entre la somme des éléments constituants et le total indiqué.

Signes conventionnels

Les signes ci-après ont été utilisés dans le *Bulletin*.

| | |
|------|--|
| . | Ne s'applique pas. |
| ... | Aucune donnée disponible. |
| — | Résultat rigoureusement zéro. |
| 0 | Résultat inférieur à la moitié de la dernière unité retenue. |

Division de statistique des Nations Unies, Questionnaire pour les indices de la production industrielle et réponses des pays au Questionnaire du Bulletin mensuel de statistique, et publications internationales et nationales.

Note :

Sauf indication contraire, les catégories industrielles sont basées sur la CITI Rév. 4 et les indices mensuels et trimestriels ne sont pas ajustés en fonction des différences du nombre de jours ouvrés ou des variations saisonnières.

Les indices signalés par † sont basés sur la CITI Rév. 3.

Les indices signalés par ‡ ont été calculés par la Division de statistique de l'ONU à partir des composantes des indices nationaux.

- 1 Chiffres annuels : moyennes de douze mois finissant le 30 juin de l'année indiquée.
- 2 Les indices mensuels sont corrigés pour tenir compte de l'inégalité du nombre de jours ouvrables.
- 3 Pour les zones contrôlées par le gouvernement.
- 4 Non compris les raffineries de pétrole.
- 5 Chiffres annuels : moyennes de quatre trimestres finissant le 30 septembre de l'année indiquée.
- 6 Chiffres annuels : moyennes de douze mois commençant le 1 avril de l'année indiquée.
- 7 Y compris la construction.
- 8 Non compris l'extraction du charbon et de pétrole brut.
- 9 Chiffres annuels : moyennes de quatre trimestres finissant le 31 mars de l'année indiquée.
- 10 Y compris l'exploitation forestière et la pêche.
- 11 Chiffres annuels : moyennes de douze mois commençant le 1 juillet de l'année indiquée.

Technical notes: tables 4 and 5

Table 4: At present, table 4 has been suspended from future editions pending implementation of ISIC Rev.4.

The indices of industrial production are classified according to sections, divisions and combinations of divisions of the International Standard Industrial Classification of All Economic Activities (ISIC), Rev.4¹ for mining, manufacturing, electricity, gas and steam, water supply and waste management activities as defined in sections B, C, D and E of the classification. The indices indicate trends in value added in constant prices. The measure of value added is the national accounting concept, which is defined as gross output less intermediate consumption. Each series is compiled by using the Laspeyres formula, that is, the indices are base-weighted arithmetic means, where the weights used in the calculation of the indices for a particular country are the value added contributions to the gross domestic product (GDP) of the given industry during the base year. The current weight base year is 2005 and value added, generally at factor cost, is used in weighting. Ideally, every five years, the base year is updated and the indices are rebased.

Within each of the ISIC categories (sections, divisions and combinations of divisions) shown in the tables, the indices for the country groupings are calculated directly from the individual provided country data. The indices for the World, however, are calculated from the aggregated indices for the groupings of developed and developing countries.

Table 5: The national indices in this table are shown for the categories "Mining", "Manufacturing", "Electricity, gas and steam" and "Water; waste management", corresponding to sections B, C, D and E of ISIC Rev.4. Major deviations from ISIC in the scope of the indices for the above categories are indicated in the titles or by footnotes to the table.

The indices for the category "General" are the combination of the components shown and share all deviations from ISIC footnoted for the component series. Therefore, ideally, this would cover the complete scope of industrial statistics, namely ISIC Rev.4 sections B, C, D and E. For the purpose of presentation, the national indices have been rebased to 2005 = 100, where necessary.

Notes techniques : tableaux 4 et 5

Tableau 4 : À présent, tableau 4 a été suspendu des futures parutions en attendant l'implémentation de CITI Rév.4.

Les indices de la production industrielle sont classés selon les sections, les divisions ou des combinaisons de divisions de la Classification Internationale type, par industrie, de toutes les branches d'activité économique (CITI), Rév.4 qui concernent les industries extractives, les industries manufacturières, l'électricité, le gaz et la vapeur ainsi que la production et la distribution d'eau et la gestion des déchets telles que définies dans les sections B, C, D et E de la classification. Ces indices représentent les tendances de la valeur ajoutée en prix constants. La mesure de la valeur ajoutée correspond à celle de la comptabilité nationale, c'est-à-dire égale à la valeur de la production brute moins la consommation intermédiaire. Chaque série a été établie au moyen de la formule de Laspeyres, ce qui signifie que les indices sont des moyennes arithmétiques affectées de coefficients de pondération, les coefficients utilisés pour calculer les indices d'un pays donné correspondant à la contribution de la valeur ajoutée au produit intérieur brut (PIB) du pays pendant l'année de base. L'année de base utilisée actuellement est 2005 et c'est la valeur ajoutée, généralement aux coûts des facteurs, qui sert pour les coefficients de pondération. En principe, l'année de base est actualisée tous les cinq ans, et les indices recalculés en fonction de la nouvelle année de base.

À l'intérieur de chacune des subdivisions de la CITI, Rév.4 (sections, divisions et combinaisons de divisions) apparaissant dans les tableaux, les indices relatifs aux groupements de pays sont calculés directement à partir des données fournies par chacun des pays. Mais les indices concernant le monde sont calculés à partir des indices agrégés des groupements de pays développés et de pays en développement.

Tableau 5 : Les indices de pays sont donnés dans ce tableau pour les catégories "Mines", "Industries manufacturières", "Électricité, gaz et vapeur", et "Production et distribution d'eau et gestion des déchets", qui correspondent aux sections B, C, D et E de la CITI Rév.4. Tous les cas où le champ des indices de ces catégories s'écartent nettement de celui des catégories correspondantes de la CITI sont indiqués dans les titres ou dans les notes du tableau.

Les indices de la catégorie "Général" sont la combinaison des indices partiels indiqués, et partagent toutes les différences par rapport à la CITI notées dans le cas des indices partiels. On a donc en principe une couverture complète du champ des statistiques industrielles, à savoir les sections B, C, D et E de la CITI Rév.4. Pour les besoins de la présentation, les indices nationaux ont été recalculés en prenant pour année de base 2005 = 100.

This table is also published on the ICSC website: <http://icsc.un.org>.

Note:
Consumption patterns may vary from those of the local population and therefore the indices cannot be considered as reflecting the general cost-of-living in the cities.

- 1 Rates are those relevant to calculation of cost-of living indexes for international officials.
- 2 Housing consists of rent, utilities and domestic service.
- 3 The "total" index was calculated on the basis of the cost of government or subsidized housing which is normally lower than prevailing rents.

Commission de la fonction publique internationale, (CFPI), New York.

Ce tableau est également publié dans le site web de l'ICSC: <http://icsc.un.org>

Note:
Consommation peut différer de celle de la population locale, ces indices ne peuvent pas être considérés comme reflétant le coût-de-la-vie général dans les villes considérées.

- 1 Les taux sont ceux employés pour calculer les indices du coût de la vie des fonctionnaires internationaux.
- 2 L'habitation se compose du loyer, de l'électricité, du gaz et de l'eau et des services domestiques.
- 3 L'indice "total" a été calculé sur la base du coût de l'habitation fournie par le gouvernement ou subventionnée normalement moins élevé des loyers courants.

Technical notes: tables 6, 7 and 8

Table 6: The consumer price index (CPI) is a current social and economic indicator that is constructed to measure changes over time in the general level of prices of consumer goods and services that households acquire, use or pay for consumption.

A consumer price index is usually estimated as a series of summary measures of the period-to-period proportional change in the prices of a fixed set of consumer goods and services of constant quantity and characteristics, acquired, used or paid for by the reference population. Each summary measure is constructed as a weighted average of a large number of elementary aggregate indices. Each of the elementary aggregate indices is estimated using a sample of prices for a defined set of goods and services obtained in, or by residents of, a specific region from a given set of outlets or other sources of consumption goods and services.

Detailed explanations of the methods used to compute the consumer price indices may be found on the ILO website at: <http://laborsta.ilo.org/>.

The general and food and non-alcoholic beverages consumer price indices are shown in the table for each country.

Table 7: Producer prices are prices at which producers sell their output on the domestic market or for export.

Producer price indices normally cover the prices of the characteristic products of agriculture, forestry, and fishing, mining and quarrying, manufacturing, and electricity, gas and water supply. Prices are normally measured in terms of transaction prices, including non-deductible indirect taxes less subsidies, in the case of domestically produced goods and import duties and other non-deductible indirect taxes less subsidies in the case of imported goods.

The Laspeyres index number formula is generally used and, for the purpose of the presentation, the national indices have been recalculated, where necessary, on the reference base 2005=100.

The price indices for each country are arranged according to the following scheme:

- a. Components of supply
 - Domestic supply
 - Domestic production for domestic market
 - Agricultural products
 - Industrial products
 - Imported goods
- b. Stage of processing
 - Raw materials
 - Intermediate goods
- c. End-use
 - Consumer goods
 - Capital goods

Table 8: The International Civil Service Commission regularly compiles index numbers which measure the relative cost-of-living of United Nations officials working in various cities.

Notes techniques : tableaux 6, 7 et 8

Tableau 6 : L'indice des prix à la consommation est un indicateur social et économique couramment utilisé pour mesurer les variations au cours du temps du niveau général des prix des biens et services acquis, utilisés ou payés par les ménages pour leur consommation.

Un indice des prix à la consommation est généralement estimé à partir d'une suite de mesures synthétiques des variations relatives, d'une période à l'autre, des prix d'un ensemble fixe de biens et de services de consommation constants en quantité et par leurs caractéristiques, acquis, utilisés ou payés par la population de référence. Chaque mesure synthétique est obtenue comme une moyenne pondérée d'un grand nombre d'indices de prix d'agrégats élémentaires. L'indice de chaque agrégat élémentaire est estimé au moyen d'un échantillon de prix pour un ensemble fixe de biens et de services que se procurent les individus de la population de référence dans une région donnée, ou qui habitent cette région, auprès d'un ensemble spécifié de points de vente ou auprès d'autres fournisseurs de biens et de services de consommation.

Les détails des explications à propos des méthodes employées pour calculer les indices des prix à la consommation peuvent être trouvés sur le site Internet du BIT : <http://laborsta.ilo.org/>.

Les indices des prix à la consommation généraux et de l'alimentation et boissons non alcoolisées sont présentés dans le tableau pour chaque pays.

Tableau 7 : Le prix à la production est le prix auquel le producteur vend ses produits sur le marché intérieur ou à l'exportation.

Les indices de prix à la production comprennent en général le prix des produits provenant de l'agriculture, de la sylviculture et de la pêche, des industries extractives (mines et carrières), de l'industrie manufacturière ainsi que le prix de l'électricité, du gaz et de l'eau. Les prix établis sont d'ordinaire ceux auxquels s'effectue la transaction, y compris les impôts indirects non déductibles mais non compris les subventions dans le cas des produits de l'économie nationale et y compris les taxes à l'importation et autres impôts indirects non déductibles mais non compris les subventions dans le cas des produits importés.

On a généralement utilisé la formule de Laspeyres et, pour la présentation, on a recalculé les indices nationaux, le cas échéant, en prenant comme base de référence 2005=100.

Les indices sont présentés pour chaque pays suivant la classification ci-après :

- a. Eléments de l'offre
 - Offre intérieure
 - Production nationale pour le marché intérieur
 - Produits agricoles
 - Produits industriels
 - Produits d'importation
- b. Stades de la transformation
 - Matières premières
 - Biens intermédiaires
- c. Utilisation finale
 - Biens de consommation
 - Biens d'équipement

The indexes compare the US Dollar costs of a representative basket of goods and services between a duty station and New York City, the base of the UN Common System. These indexes are updated to reflect price changes over time at the duty station and New York, movements in the exchange rate of the local currency vis-à-vis the United States dollar and to adjust for expenditures made by the staff outside the duty station.

Detailed explanations of the methods used to compute the indexes may be found on the ICSC Homepage at: <http://icsc.un.org/col-rpi.asp>.

Tableau 8 : La Commission de la Fonction Publique Internationale compile régulièrement les indices mesurant le coût de la vie relatif aux fonctionnaires des Nations Unies en poste dans diverses villes du monde.

Les indices comparent, en dollars EU, le coût d'un panier représentatif de biens et services entre une ville donnée et New York, base du système commun de L'ONU. Ces indices sont mis à jour pour refléter le changement de prix temporels dans les villes-postes et à New York, les mouvements du taux de change de la monnaie locale vis-à-vis du dollar EU et pour ajuster les dépenses faites par le personnel en dehors de la ville-poste.

Les détails des explications à propos des méthodes employées pour calculer les indices peuvent être trouvés sur le site Internet de la CFPI : <http://icsc.un.org/col-rpi.asp>.

Technical notes: tables 9-12

Table 9: Unless otherwise indicated, the data are from labour force surveys, refer to persons aged 15 years and over and to employees (wage earners and salaried employees) working on a specified day or during a specified week in each month or quarter, or sometimes to the average number working during a given period.

Mining and quarrying; manufacturing; electricity, gas and water; construction; wholesale and retail trade, restaurants and hotels; transport, storage and communication; financing, insurance, real estate and business services; community, social and personal services; activities not adequately defined.

Table 10: Unless otherwise indicated, the data are from labour force surveys, refer to persons aged 15 years and over and to employees (wage earners and salaried employees) working on a specified day or during a specified week in each month or quarter, or sometimes to the average number working during a given period.

Table 11: Unemployment generally represents the total number of persons wholly unemployed and temporarily laid-off. The data are derived from (a) labour force sample surveys, (b) employment office statistics, (c) official estimates and (d) insurance records. In using these series, consideration should be given to the source of the data. In general, the figures relating to percentage unemployed are calculated by expressing the number of unemployed in a given period as a percentage of the total number of employed and unemployed persons in the group considered during the same period.

Table 12: Earnings in manufacturing generally relate to the average earnings of wage earners in manufacturing industries. Earnings normally include bonuses, cost of living allowances, taxes, social insurance contributions payable by the employed person and, in some cases, payments in kind, and normally exclude social insurance contributions payable by the employers, family allowances and other social security benefits. The time of year to which the figures refer is not the same for all countries. Unless otherwise noted, the source of the data is from labour-related establishment surveys, and the data refer to employees of both sexes, irrespective of age.

Some of the series do not conform to the above for one or more of the following reasons: different type of source or coverage, inclusion of non-manufacturing industries and use of wage rates, instead of earnings.

Tableau 9 : Sauf indication contraire, les données proviennent d'enquêtes par sondage sur la main-d'œuvre, se réfèrent aux personnes âgées de 15 ans et plus et aux salariés (ouvriers et employés) travaillant pendant un jour ou une semaine donnés de chaque mois ou trimestre ou parfois au nombre moyen des personnes travaillant durant une période déterminée.

Industries extractives; industries manufacturières; électricité, gaz et eau; construction; commerce de gros et de détail, restaurants et hôtels; transports, entrepôts et communications; banques, assurances, affaires immobilières et services aux entreprises; services à la collectivité, services sociaux et personnels; activités mal désignées..

Tableau 10 : Sauf indication contraire, les données proviennent d'enquêtes par sondage sur la main-d'œuvre, se réfèrent aux personnes âgées de 15 ans et plus et aux salariés (ouvriers et employés) travaillant pendant un jour ou une semaine donnés de chaque mois ou trimestre ou parfois au nombre moyen des personnes travaillant durant une période déterminée.

Tableau 11 : Le chômage représente, en général, le nombre total des chômeurs et des personnes temporairement débauchées et proviennent (a) des enquêtes par sondage de la main-d'œuvre, (b) des statistiques des bureaux de placement, (c) des estimations officielles et (d) fichiers des assurances. En employant ces séries, il faut tenir compte de la source des données. En général, pour établir les pourcentages de chômage, on calcule le rapport entre le nombre des ouvriers en chômage pour un groupe donné, pendant une certaine période, et l'effectif total des personnes employées et des chômeurs dans ce groupe, pendant la même période.

Tableau 12 : Gains dans les industries manufacturières se rapportent en général aux gains moyens des ouvriers dans les industries manufacturières. Les gains comprennent normalement les primes, les allocations de vie chère, les impôts, les contributions des ouvriers au fonds d'assurance sociale et dans certains cas, les paiements en nature, ils excluent normalement les contributions des employeurs au fonds d'assurance sociale, les allocations familiales et autres prestations de la sécurité sociale. La période de l'année correspondant aux données varie d'un pays à l'autre. Sauf indication contraire, la source des données est d'enquêtes auprès des établissements liés au travail, et les données se rapportent aux employés des deux sexes, considéré quel que soit leur âge.

Certaines de ces séries s'écartent des normes indiquées ci-dessus pour l'une ou les raisons suivantes : type de source ou de la couverture, l'inclusion d'industries autres que manufacturières et l'emploi, dans les calculs, de taux de rémunération au lieu de gains.

- 1 In December 2008, we revised our estimation of data for 2008 unit value indices for fuels imports for some countries. This revision was done in order to align them with the developments observed in other similar countries. This has caused a revision in data for unit value and volumes for the corresponding regions.
- 2 Derived from price indices; national unit value index is discontinued.
- 3 Derived from sub-indices using current weights.
- 4 Indices are calculated by the United Nations Statistics Division.
- 5 The annual data for values are annual totals.

- 1 En décembre 2008, nous avons révisé les estimations correspondant à l'année 2008 pour les indices de valeur unitaire à l'importation de produits énergétiques pour certains pays. Cette révision était effectuée afin de les aligner avec les développements observés pour d'autres pays similaires. Ceci a conduit à une révision des indices de valeur unitaire et de volume pour les régions correspondantes.
- 2 Calculés à partir des indices de prix; L'indice de la valeur unitaire national est discontinué.
- 3 Calculés à partir de sous-indices à coefficients de pondération correspondant à la période en cours.
- 4 Les séries sont calculés par la Division de Statistique des Nations Unies.
- 5 Les données annuelles pour les valeurs sont les totaux annuels.

Technical notes: tables 13-16, 18 and 19

Table 13: The data relate to all grades of anthracite and bituminous coal and exclude lignite and sub-bituminous coal unless otherwise specified.

Table 14: Data relate to lignite and brown coal.

Table 15: Data exclude natural gas liquids. For some countries, original data expressed in units of capacity or volume have been converted to metric tons by use of the average specific gravities shown in the column headings. Data in thousands of cubic metres can be derived by dividing the figures shown in the table by the appropriate specific gravity. These volume data, in turn, can be converted into thousands of barrels by multiplication by a factor of 6.2898. Further information may be found in the *Energy Statistics Yearbook* (Statistical Papers, Series J), United Nations.

Table 16: Data relate as far as possible, to net production of natural gas.

Tables 18 and 19: Fuels are here defined to comprise all products in section 3 of the SITC.

These products are: coal, coke and briquettes, petroleum, petroleum products and related materials, gas and electric current.

The unit value indices are obtained from national sources, except those of a few countries which the United Nations Statistics Division compiles using their quantity and value figures.

For countries that do not compile indices for fuel imports conforming to the above definition, sub-indices are aggregated to approximate an index of SITC section 3.

Unit value indices obtained from national indices are rebased, where necessary, so that 2000=100. Indices in national currency are converted into U.S. dollars using conversion factors obtained by dividing the weighted average exchange rate of a given currency in the current period by the weighted average exchange rate in the base period. All aggregate unit value indices are current period weighted.

The volume indices are derived from the value data and the unit value indices. All aggregate volume indices are base period weighted.

The figures in table 19 are calculated from those prepared for tables 18 and 38.

Notes techniques : tableaux 13 à 16, 18 et 19

Tableau 13 : Les données se rapportent à toutes les qualités d'anthracite et de charbon bitumineux et ne comprennent pas le lignite et le charbon sous-bitumineux sauf indication contraire.

Tableau 14 : Les données se rapportent au lignite et au charbon brun.

Tableau 15 : Les données ne comprennent pas les condensats du gaz naturel. Pour certain pays, les données originales exprimées en unités de capacité ou de volume ont été converties en tonnes métriques à l'aide de la densité indiquée dans l'en-tête. Pour exprimer les données en milliers de mètres cubes, il suffit de diviser les chiffres qui figurent dans le tableau par le poids spécifique indiqué. On peut ensuite convertir les mètres cubes en barils en multipliant par 6.2898. Pour plus de détails, voir l'*Annuaire des statistiques de l'énergie* (Statistical Papers, Series J), Nations Unies.

Tableau 16 : Les données se rapportent, autant que possible, à la production nette du gaz naturel.

Tableaux 18 et 19 : Les produits énergétiques comprennent tous les produits appartenant à la section 3 de la CTIC.

Ces produits sont : huiles, coques et briquettes, pétrole, produits dérivés du pétrole et produits connexes, gaz et énergie électrique.

Les indices de la valeur unitaire sont obtenus de sources nationales, à l'exception de quelque pays pour lesquels la Division de Statistique des Nations Unies calcule ces indices en utilisant les chiffres de la valeur et du volume fournis par ces pays.

Pour les pays ne calculant pas leurs indices des importations des produits énergétiques selon la définition décrite ci-dessus les sous-indices sont agrégés en un indice qui se rapproche des la section 3 de la CTIC.

Les indices en monnaie nationale sont convertis en dollars des E.-U. en les multipliant par un facteur de conversion obtenu en divisant le taux de change courant, moyenne pondérés, d'une monnaie donnée par celui de la période de base. Tous les agrégés des indices de la valeur unitaire, sont à coefficients de pondération correspondant à la période indiquée.

Les indices du volume sont calculés à partir de chiffres de la valeur et les indices de la valeur unitaire. Tous les agrégés des indices du volume sont à coefficients de pondération correspondant à la période en base.

Les chiffres dans le tableau 19 sont calculés selon des données préparées pour les tableaux 18 et 38.

- 1 In November 2008, extrapolated figures for re-exports of Japan were replaced with actual data for the years 1999-2007 which lead to an increase of exports and imports on world level by 17 billion in 2004, 35 billion in 2005, 62 billion in 2006 and 103 billion in 2007.
- 2 In February 2008, the regional total for South-eastern Asia and the World total have been revised upwards very significantly for 2006 and the first three quarters of 2007 due to a correction of estimated data (re-exports) used in the calculation of these totals.

- 4 In May 2010, the previous estimates of exports for 2009 of some major oil exporting countries have been revised downwards significantly using, inter alia, available mirror statistics, resulting in a major correction of the world and some regional totals. - 21 Imports and exports net of returned goods. The figures also exclude Judea and Samaria and the Gaza area.
- 22 Year ending 30 September of the years stated.
- 23 Data refer to total exports less petroleum exports of Asia Middle East countries where petroleum, in this case, is the sum of SITC groups 333, 334 and 335.

- En novembre 2008, les statistiques de réexportations du Japon, jusque la estimées ont été mises à jour avec des données actuelles pour 1999-2007. Ceci a conduit à une augmentation des exportations et importations mondiales de 17 milliards en 2004, 35 milliards en 2005, 62 milliards en 2006 and 103 milliards en 2007.
- En février 2008, le total régional de l'Asie du sud-est et le total du monde ont été révisés à la hausse très significative pour l'année 2006 et les premiers trois trimestres de l'année 2007 à cause d'une correction des données estimées (des réexportations) qui sont utilisées dans ces totaux.
- En avril 2006, les totaux régionaux ont été diminués à cause d'une identification additionnelle des réexportations, en particulier celles du Singapour et de l'Italie.
- En mai 2010, les estimations des données d'exportations de 2009 pour quelques grands pays exportateurs de pétrole on été révisées significativement à la baisse, sur la base entre autres des statistiques miroirs, causant une correction majeure du total pour le monde et certaines régions. En avril 2010, des estimations pour le quatrième trimestre de 2009 ont été remplacées par données actuelles ou des estimations révisées, conduisant à une correction majeure des totaux pour le monde et les régions.
- Économies développées de l'Amérique, de l'Europe, et de la région Asie-Pacifique.

- Avant 2008, commerce spécial.
- Non compris le pétrole brute dont la valeur des importations ne sont pas stipulée. Les exportations sont les exportations d'intérieur.
- Les exportations comprennent l'or.
- Les statistiques commerciales font exclusion de certains produits pétroliers et chimiques.
- Les valeurs à l'exportation et à l'importation excluent le commerce de la zone de transformation.

Technical notes, tables 34-42

Tables 34 and 35 appear in each issue of the *Bulletin* showing current trade statistics by country, region and area. Other analytical trade data are presented quarterly, semi-annually and annually. These are listed in the table of contents, together with the issues in which each series appears.

Value of imports and exports. The descriptions given in the headings and footnotes to table 35 apply, unless otherwise stated, to table 34 as well. The regional totals of table 34 have been adjusted where necessary to approximate imports CIF and exports FOB in special trade, and to include countries not listed separately, and estimates where complete area data were not available. Balance of trade figures represent the difference of imports from exports.

Price, unit value and volume indices. Price index is a measure of the change in the value of exports/imports due to changes in prices of individual commodities. Unit value index reflects changes in the average prices of commodity groups. Volume index is a measure of the changes in the value of exports/imports which may be attributed to variations in the quantities of the individual commodities.

General definitions. Detailed general definitions conforming to the recommendations of the Economic and Social Council and its Statistical Commission define the series in tables 34 and 35.

Territory. The statistics reported by a country generally refer to the customs area; in most cases this coincides with the geographical area of a country.

Systems of trade. Imports: under the general trade system, both goods entering directly for domestic consumption and goods entered into customs storage are recorded, at the time of their first arrival, as imports; under the *special trade* system, goods are recorded as imports when declared for domestic consumption whether at time of entry or on withdrawal from customs storage.

Exports: outward moving goods consist of: (a) *national* goods i.e. those wholly or partly produced in the country; (b) *foreign* goods, neither transformed nor declared for domestic consumption in the country, which move outward from customs storage; (c) *nationalized* goods, i.e. foreign goods, declared for domestic consumption, which move outward without having been transformed. *General exports* comprise all three categories and, in the general trade system, the sum of (b) and (c) may be tabulated as re-exports. *Special exports* comprise categories (a) and (c). Direct transit trade, consisting of goods entering or leaving for transport purposes only, is excluded from both import and export statistics.

Coverage of data. In general, all inward moving goods, in the relevant administrative categories described above, are included if their movement adds to or subtracts from the material resources of the country compiling the statistics. Because their movement generally changes monetary rather than material resources, monetary gold together with currency and titles of ownership after their issue into circulation are excluded. Among the categories included where possible in the data are: ordinary commercial transactions, governmental transactions, foreign aid (governmental and private), trade of concessionaires and silver (except issued silver coin).

Valuation. It is usual for a country to base the valuation of its imports and exports on the values specified in contracts between importers and exporters adjusted to include transportation and related costs to its own frontier. This produces a CIF transaction value for imports and an FOB transaction value for exports. Where a country values its imports at the frontier of the exporting country, it is noted in the tables that import values are FOB.

Notes techniques, tableaux 34 à 42

Les tableaux 34 et 35 contenant les statistiques de l'état du commerce par pays, par région, et par zone paraissent dans chaque numéro du *Bulletin*. D'autres statistiques détaillées du commerce sont publiées tous les trimestres, tous les semestres ou une fois par an. Elles sont mentionnées dans la table des matières, avec indication des numéros dans lesquels on trouve chacune de ces séries.

Valeur des importations et des exportations. Sauf indication contraire, les précisions données dans les en-têtes de colonne et les renvois du tableau 35 valent aussi pour les statistiques au tableau 34. Les totaux régionaux au tableau 34 ont été, le cas échéant, ajustés de façon à correspondre à peu près au commerce spécial d'importation (valeur CIF) et au commerce spécial d'exportation (valeur FOB); ils tiennent compte également des pays qui ne figurent pas dans la liste et comprennent des estimations dans le cas des régions pour lesquelles les données ne sont pas complètes. Les chiffres de la balance commerciale représentent la différence entre les exportations et les importations.

Indices des prix, de la valeur unitaire et du volume. L'indice des prix est une mesure du changement de valeur de des exportations/importations attribué aux fluctuations des prix des divers produits. L'indice de la valeur unitaire indique quelles sont les variations des prix moyens des groupes des produits. L'indice du volume est une mesure du changement de valeur des exportations/importations attribué aux fluctuations des quantités des divers produits.

Définitions générales. Pour les séries publiées dans les tableaux 34 et 35, il existe des définitions générales, détaillées qui sont conformes aux recommandations du Conseil économique et social et de sa Commission de statistique.

Territoire. Les statistiques rapportées par un pays s'appliquent en général au territoire douanier du pays qui coïncide, généralement, avec le territoire géographique.

Système du commerce. Importations : dans le système du commerce général à la fois les marchandises entrant directement pour la consommation nationale et les marchandises entrées dans les entrepôts des douanes sont enregistrées comme importations, au moment de leur première arrivée; dans le système du *commerce spécial*, les marchandises sont enregistrées comme importations lorsqu'elles sont déclarées pour la consommation nationale, soit au moment de leur entrée, soit lorsqu'elles sont retirées des entrepôts des douanes.

Exportations : les marchandises sortant consistent (a) en marchandises *nationales*, c'est-à-dire entièrement ou partiellement produites dans le pays; (b) en marchandises *étrangères*, ni transformées, ni déclarées pour la consommation nationale dans le pays, qui sortent des entrepôts des douanes; (c) en marchandises *nationalisées*, c'est-à-dire marchandises étrangères, déclarées pour la consommation nationale, qui sont exportées sans avoir été transformées. Les *exportations générales* comprennent les 3 catégories et, dans le système du commerce général, le total de (b) et (c) peut être enregistré comme réexportations. Les *exportations spéciales* comprennent les catégories (a) et (c). Le commerce de transit direct, consistant en marchandises entrées ou sorties pour des seuls buts de transport, n'est pas compris dans les statistiques d'importations et d'exportations.

Portée des données. En général, toutes les marchandises entrées ou sorties dans les catégories administratives appropriées décrites plus haut, sont comprises si leur mouvement s'ajoute aux ressources matérielles du pays établissant les statistiques ou s'en retranche. Vu que leur mouvement, en général, modifie plutôt les ressources monétaires que les ressources matérielles, l'or monétaire ainsi que les monnaies et titres de propriété

World imports and exports are the sum of imports and exports of Developed economies, Developing economies and Other. The regional totals for exports and imports have been adjusted to exclude the re-exports of countries or areas comprising each region. Estimates for certain countries or areas not shown separately as well as for those shown separately but for which no data are yet available are included in the regional and world totals. Regional totals containing estimated data are printed in bold.

Export and import values are derived by the United Nations Statistics Division (UNSD) from data published in national publications, or from data on the Monthly Bulletin of Statistics Questionnaires for the following countries: American Samoa, Andorra, Bermuda, Cayman Islands, Cook Islands, Cuba, Faeroe Islands, French Polynesia, Gibraltar, Greenland, Kiribati, Montenegro (beginning 2006), Netherland Antilles, New Caledonia, Occupied Palestinian Territory, Russian Federation, Serbia and Montenegro (before 2006), Turkmenistan, Turks and Caicos, Tuvalu and Uzbekistan.

Export and import dollar values for all other countries are derived from data published by the International Monetary Fund (IMF) in the International Financial Statistics publication.

Table 36: The volume and unit value/price indices are as compiled by countries converted to U.S. dollars and reset to 2000 = 100. Using these indices, The United Nations Statistics Division calculates the terms of trade indices (export unit value/price indices divided by the corresponding import unit value/price indices), and the indices of the purchasing power of exports (the terms of trade multiplied by the volume index of exports). Country footnotes which appear in Table 35 of this issue also apply to the country indices published in this table.

Table 37: Trade Conversion Factors are weighted averages of exchange rates, the weights being the corresponding monthly or quarterly values of imports or exports. The exchange rates are the rates provided by the country concerned or compiled by the IMF.

Table 38: The purpose of this table is to provide indices of international trade by regions.

Table 39: Manufactured goods are here defined to comprise sections 5 through 8 of the Standard International Trade Classification (SITC).

These sections are: chemicals and related products, manufactured goods classified chiefly by material, machinery and transport equipment and miscellaneous manufactured articles.

The economic and geographic groupings in accordance with those of the international merchandise trade, table 34 in this issue, although table 34 includes more detailed geographic sub-groups which make up the groupings 'Other developed economies' and 'Developing economies' of this table.

In 2000 the exports of manufactured goods by all 'Developed' and 'Developing economies' accounted for approximately 97 per cent of world exports of manufactured goods.

The unit value indices are obtained from national sources.

For countries that do not compile indices for manufactured goods export conforming to the above definition, sub-indices are aggregated to approximate an index of SITC sections 5-8.

Unit value indices obtained from national indices are rebased, where necessary, so that 2000=100. Indices in national currency are converted into U.S. dollars using conversion factors obtained by dividing the current weighted average exchange rate by the weighted average exchange rate in the base period. All aggregate unit value indices are current period weighted.

The indices in SDRs are calculated by multiplying the equivalent

après leur mise en circulation sont exclus. Parmi les catégories incluses, si possible, dans les données figurent : transactions commerciales ordinaires, transactions gouvernementales, aide de l'étranger et à l'étranger (gouvernementale et privée), commerce des concessionnaires, argent (excepté pièces de monnaie émises).

Evaluation. En général, les pays basent l'évaluation de leurs importations ou de leurs exportations sur les valeurs spécifiées dans les contrats entre importateurs et exportateurs et ajustées pour tenir compte des frais de transport et autres frais connexes jusqu'à leurs propres frontières. Le résultat est une valeur de transaction CIF pour les importations et une valeur de transaction FOB pour les exportations. Lorsqu'un pays évalue ses importations à la frontière du pays exportateur, les tableaux indiquent que les valeurs des importations sont FOB.

Les importations et les exportations totales pour le monde se composent des importations et exportations des Economies développées, des Economies en voie de développement et des Autres. Les totaux régionaux pour importations et exportations ont été ajustés pour exclure les re-exportations des pays ou zones qui comprennent la région. Les totaux régionaux et mondiaux comprennent des estimations pour certains pays ou zones ne figurant pas séparément mais pour lesquels les données ne sont pas encore disponibles. Les totaux régionaux contenant des données estimées sont imprimés en caractères gras.

Les valeurs des exportations et des importations ont été obtenues par la Division de statistique des Nations Unies (DSNU) à partir des données publiées dans les publications nationales, ou des données publiées dans les questionnaires du Bulletin Mensuel de Statistique pour les pays suivants : Samoa américaines, Andorre, Bermudes, Îles Caïmans, les Îles Cook, Cuba, Îles Féroé, la Fédération de Russie, Gibraltar, Groenland, Kiribati, Monténégro (commençant 2006), Antilles néerlandaises, la Nouvelle-Calédonie, la Polynésie française, Serbie et Monténégro (avant de 2006), Territoire Palestinien Occupé, Turkménistan, Îles Turques et Caïques, Tuvalu et Ouzbékistan.

Les valeurs en dollars des É.-U. des exportations et des importations de tous les autres pays ont été obtenues à partir des données publiées par le Fonds Monétaire International dans la publication "Statistiques Financières Internationales".

Tableau 36 : Les indices du volume et les indices de la valeur unitaire/prix sont comme compilées par les pays mais convertis en dollars des É.-U. et remis à 2000 = 100. Utilisant ces indices la Division de Statistique des Nations Unies calcule les indices des termes de l'échange (sont obtenus en divisant les indices de la valeur unitaire à l'exportation par ceux à l'importation), et les indices du pouvoir d'achat des exportations (sont obtenu en multipliant l'indice des termes de l'échange par l'indice du volume des exportations). Les notes se rapportant aux pays qui apparaissent dans le Tableau 35 de ce numéro s'appliquent aussi aux indices de ce tableau.

Tableau 37 : Les facteurs de conversion pour le commerce extérieur sont les moyennes pondérées des taux de change. Les coefficients de pondération sont les valeurs mensuelles ou trimestrielles correspondantes des importations ou des exportations. Les taux de change sont les taux fournis par le pays ou calculés par le secrétariat du FMI.

Tableau 38 : Le but de ce tableau est de fournir les indices du commerce international par régions.

Tableau 39 : Les produits manufacturés comprennent les sections 5 à 8 de la Classification type pour le commerce international (CTCI).

Ces sections sont : produits chimiques et produits connexes, articles manufacturés classés principalement d'après la matière première, machines et matériel de transport et articles manufacturés divers.

aggregate indices in U.S. dollars by conversion factors obtained by dividing the SDR/\$US exchange rate in current period by the rate in the base period.

Table 40: The purpose of this table is to provide a summary of total exports within and between important economic and geographic areas of the world.

The economic and geographic groupings in this table are in accordance with those of Table 34 in this issue.

Export data in this table are largely comparable to that shown in Table 34 except that Table 34 contains revised data for total exports which are not incorporated into this table if the corresponding revised data by country of destination are not available. Also, the regional totals shown in Table 34 have been adjusted to exclude the re-exports of countries comprising each region. This adjustment is not made in this table since re-exports are often not available by destination.

The data approximate total exports of all countries and areas of the world. They are based on official export figures converted, where necessary, to U.S. dollars according to conversion factors published in table 37 each quarter in this Bulletin (March, June, September and December). Where official figures are not available estimates based on the imports reported by partner countries and on other subsidiary data are used. Some official national data have been adjusted to approximate calendar years. The data include special category (confidential) exports, ships' stores and bunkers and exports of minor importance, the destination of which cannot be determined. These data are included in the total exports, but are excluded from all regions of destination.

Tables 41 and 42: The purpose of these tables is to provide data on the network of flows of broad groups of commodities within and between important economic and geographic areas of the world.

The regional analysis in these tables is in accordance with that of Table 34 in this issue.

Export data in these tables are largely comparable to that shown in Table 34 except that Table 34 contains revised data for total exports which are not incorporated into this table if the corresponding revised data at the commodity/destination level are not available. Also, the regional totals shown in Table 34 have been adjusted to exclude the re-exports of countries comprising each region. This adjustment is not made in this table since re-exports are often not available by commodity and by destination.

The commodity classification is in accordance with the United Nations' Standard International Trade Classification (SITC), Revision 3.

The data are based on official export figures converted, where necessary, to U.S. dollars according to conversion factors published quarterly in Table 37 in this Bulletin (March, June, September and December). Where official figures are not available estimates based on the imports reported by partner countries and on other subsidiary data are used. Some official national data have been adjusted to approximate the commodity groupings of the SITC.

The data include special category (confidential) exports, ships' stores and bunkers and exports of minor importance, the destination of which cannot be determined. These data are included in the world totals for each commodity group and in total exports, but are excluded from all regions of destination. Major regional aggregates are presented for each commodity category, as well as the four largest exporting countries in the European Union and the two largest exporting countries in the 'Other developed economies' group.

Les groupes économiques et géographiques de ce tableau sont conformes aux groupes des pays ou zones qui paraissent dans le tableau 34 de ce numéro, bien que le tableau 34 comprenne plus de détails en ce qui concerne les sous-groupes des 'Autres économies développées' et 'Economies en voie de développement' de ce tableau.

En 2000, les exportations des produits manufacturés par tous les Economies développées et les 'Economies en voie de développement' représentaient approximativement 97 pour cent de l'ensemble des exportations mondiales des produits manufacturés.

Les indices de la valeur unitaire sont obtenus de sources nationales.

Pour les pays ne calculant pas leurs indices des exportations des produits manufacturés selon la définition décrite ci-dessus les sous-indices sont agrégés en un indice qui se rapproche des sections 5 à 8 de la CTCL.

Les indices en monnaie nationale sont convertis en dollars des É.-U. en les multipliant par un facteur de conversion obtenu en divisant le taux de change courant, moyenne pondérés, d'une monnaie donnée par celui de la période de base. Tous les agrégés des indices de la valeur unitaire, sont à coefficients de pondération correspondant à la période indiquée.

Les indices en DTS sont calculés en multipliant les indices totaux équivalents en dollars É.-U. par un facteur de conversion obtenu en divisant le taux de change courant du DTS/\$É-U d'une monnaie donnée par celui de la période de base.

Tableau 40 : Le but de ce tableau est de fournir un aperçu du courant des marchandises entre les grandes régions importantes économiques et géographiques du monde et de leur commerce intérieur. Les groupes économiques et géographiques de ce tableau sont conformes à ceux du Tableau 34 de ce numéro.

Les données des exportations dans ce tableau sont en générale comparables aux chiffres qui sont inclus dans le Tableau 34, exceptées celles du Tableau 34 qui comportent des révisions aux exportations totales qui ne sont pas inclus dans ce tableau si les révisions des données correspondantes aux pays de destination ne sont pas disponibles. De plus, les totaux régionaux inclus dans le Tableau 34 ont été ajustés pour exclure les réexportations des pays qui comprennent la région. Cet ajustement n'est pas fait dans ce tableau parce que des réexportations ne sont pas disponibles fréquemment par destination.

Les données approchées des exportations totales de tous pays et régions du monde. Elles sont basées sur les chiffres des exportations officielles nationales convertis en dollars É.-U. selon les facteurs de conversion publiés chaque trimestre dans le tableau 37 de ce bulletin (mars, juin, septembre et décembre). Quand les chiffres officiels ne sont pas disponibles on a recours à des estimations basées sur les importations rapportées par les pays partenaires ou sur d'autres données subsidiaires. Quelques données officielles nationales ont été ajustées qu'elles correspondent aux années civiles.

Les données comprennent les exportations de catégorie spéciale (confidentielles), les approvisionnements des navires et combustible de soute et autres exportations de moindre importance dont la destination n'a pu être déterminée. Ces données sont comprises dans les exportations totales, mais elles ne sont pas comprises dans les régions de destination.

Tableaux 41 et 42 : Le but de ces tableaux est de fournir un aperçu du courant des marchandises entre les régions importantes économiques et géographiques du monde et de leur commerce intérieur.

L'analyse régionale dans ces tableaux est conforme à celle du Tableau 34 du présent numéro.

Les données des exportations dans ces tableaux sont en générale comparables aux chiffres qui sont inclus dans le Tableau 34, exceptées

celles du Tableau 34 qui comportent des révisions aux exportations totales qui ne sont pas inclus dans ce tableau si les révisions des données correspondantes au niveau de marchandise/destination ne sont pas disponibles. De plus, les totaux régionaux inclus dans le Tableau 34 ont été ajustés pour exclure les re-exportations des pays qui comprennent la région. Cet ajustement n'est pas fait dans ce tableau parce que des re-exportations ne sont pas disponibles fréquemment par marchandise et par destination.

La classification par marchandise utilisée est la Classification type pour le commerce international (CTCI) Révision 3 des Nations Unies.

Les données sont basées sur les chiffres des exportations officielles nationales convertis en dollars É.-U. selon les facteurs de conversion publiés chaque trimestre dans un tableau spécial dans ce Bulletin (mars, juin, septembre et décembre). Quand les chiffres officiels ne sont pas disponibles on a recours à des estimations basées sur les importations rapportées par les pays partenaires ou sur d'autres données subsidiaires. Quelques données officielles nationales ont été ajustées qu'elles correspondent aux groupes des marchandises de la CTCI.

Les données comprennent les exportations de catégorie spéciale (confidentielles), les approvisionnements des navires et combustible de soute et autres exportations de moindre importance dont la destination n'a pu être déterminée. Ces données sont comprises dans les totaux de chaque groupe de marchandise et dans les exportations totales, mais elles ne sont pas comprises dans les régions de destination.

Les majeurs agrégats régionaux sont montrés pour chaque catégorie de marchandise, de même que les quatre plus grands pays exportateurs dans la Union Européenne et les deux plus grands pays exportateurs dans le groupe 'Autres économies développées'.

Technical notes: tables 43-50

The data in these tables are furnished by the International Monetary Fund (IMF). Descriptions of each of the national series are contained in International Financial Statistics, published monthly by the IMF.

Table 43: Foreign exchange rates are shown in units of national currency per US dollar. The exchange rates are classified into three broad categories, reflecting both the role of the authorities in the determination of the exchange and/or the multiplicity of exchange rates in a country. The *market rate* is used to describe exchange rates determined largely by market forces; the *official rate* is an exchange rate determined by the authorities, sometimes in a flexible manner. For countries maintaining multiple exchange arrangements, the rates are labeled *principal rate*, *secondary rate*, and *tertiary rate*. Unless otherwise stated, the table refers to end of period and period averages of market exchange rates or official exchange rates. For further information see *International Financial Statistics*.

Table 44: The money supply table shows money and reserve money.

Money relates to the liabilities of the monetary system in currency and demand deposits to the domestic private sector.

Reserve money relates to the liabilities of the monetary authorities in currency and demand deposits to deposit money banks and the domestic private sector.

Table 45: The table reports the US dollar value of monetary authorities (central banks, currency boards, exchange stabilization funds and treasuries to the extent that they perform similar functions) holdings of Special drawing rights (SDRs), Reserve Position in the Fund, foreign exchange and the sum of these items which is Total Reserves minus gold.

Foreign exchange is defined as holdings by monetary authorities (central banks, currency boards, exchange stabilization funds, and Treasuries to the extent that they perform similar functions) of claims on foreigners in the form of bank deposits, Treasury bills, short and long-term government securities, and other claims usable in the event of a balance-of-payments deficit, including non-marketable claims arising from inter-central bank and intergovernmental arrangements without regard to whether the claim is denominated in the currency of the debtor or the creditor.

Table 46: The table reports data on official holdings of gold expressed in physical terms (millions of fine troy ounces) for all countries.

Table 47: These series measure the trend of long-term interest rates. They usually comprise the yield to maturity (YM) or the current yield (CY) of a single issue of government or quasi-government bonds whose ownership is widely distributed and with a final maturity of not less than 10 years. Current yields based on “irredeemable or perpetual” government bonds (which carry no obligation of repayment at a fixed date but which usually are redeemable at the option of the government) are designated as YP.

Notes techniques : tableaux 43 à 50

Les données ont été communiquées par le Fonds monétaire international (FMI). Des définitions détaillées sont données dans les Statistiques Financières Internationales, publiées mensuellement par le FMI.

Tableau 43 : Les taux des changes sont exprimés par nombre d'unités de monnaie nationale pour un dollar des Etats-Unis. Les taux de change sont classés en trois catégories, qui dénotent le rôle des autorités dans l'établissement des taux de change et/ou la multiplicité des taux de change dans un pays. Par *taux du marché*, on entend les taux de change déterminés essentiellement par les forces du marché; le *taux officiel* est un taux de change établi par les autorités, parfois selon des dispositions souples. Pour les pays qui continuent de mettre en œuvre des régimes de taux de change multiples, les taux sont désignés par les appellations suivantes : “taux principal”, “taux secondaire” et “taux tertiaire”. Sauf indication contraire, le tableau indique des taux de fin de période et les moyennes sur la période, des taux de change du marché ou des taux de change officiels. Pour plus de renseignements, voir *Statistiques financières internationales*.

Tableau 44 : Le tableau des disponibilités monétaires indique d'une part la monnaie, d'autre part la monnaie de réserve.

Par “monnaie” on entend le passif du système monétaire sous forme de monnaie fiduciaire et en dépôts à vue à l'égard du secteur privé national.

Par “monnaie de réserve” on entend le passif des autorités monétaires en monnaie fiduciaire et en dépôts à vue à l'égard des banques de dépôt et du secteur privé national.

Tableau 45 : Le tableau présente la valeur en dollars EU des avoirs des autorités monétaires (banque centrale, fonds de stabilisation des changes et, dans la mesure où il exerce des fonctions analogues, Trésor public) représentant : droits de tirage spéciaux (DTS), position de réserve au FMI, devises étrangères, plus la somme de ces éléments qui est Réserves total moins l'or.

Les *réserves de devises* sont les avoirs des autorités monétaires—banques centrales, offices des changes, fonds de stabilisation des changes et Trésors (dans la mesure où ceux-ci exercent des fonctions analogues) — en créances sur des étrangers sous forme de dépôts bancaires, bons du Trésor, fonds d'Etats à court et à long terme et autres créances utilisables en cas de déficit de la balance des paiements, y compris les créances non négociables résultant d'arrangements entre banques centrales et entre gouvernements que la créance soit libellée dans la monnaie du débiteur ou dans celle du créancier.

Tableau 46 : Le tableau présente les avoirs officiels en or exprimés en unités physiques (millions d'onces troy de fin) pour tous les pays.

Tableau 47 : Ces séries représentent l'évolution des taux d'intérêt des obligations à long terme. Elles représentent habituellement le taux de capitalisation (YM) (rendement net jusqu'à l'échéance) ou le rendement courant (CY) d'une seule

Table 48: Rates shown represent those rates at which the central bank either discounts or makes advances against eligible commercial paper and/or government securities for commercial banks or brokers. For countries with more than one rate applicable to such discounts or advances, the rate shown is the one at which the largest proportion of central bank credit operations is understood to be transacted. The importance of these rates as instruments of monetary control vary considerably from country to country and inter-country comparisons should not be made without further investigation.

Table 49: Rates shown represent short-term money market rates—the rate at which short-term borrowings are effected between financial institutions or the rate at which short-term government paper is issued or traded in the market. Typical standardized names for these rates are *Money Market Rate* and *Treasury Bill Rate*, respectively.

Table 50: Index numbers of share prices are based primarily on common shares traded on the leading exchange or exchanges of each country and are intended to cover a representative sample of the companies registered.

The indexes are intended to show the increase in value accruing to an investor who bought in the base period a list of shares corresponding in selection and amount to those contained in the index, who subsequently made only such changes in holdings as the substitution of new issues for retired issues, and who retained, in the form of shares, the proceeds of all rights, warrants and share dividends made available since the base period.

émission d'obligations de l'Etat ou d'organismes parastataux qui ont été largement diffusées. L'échéance finale de l'émission considérée doit en principe avoir lieu au moins 10 ns après la date d'émission. Les lettres YP désignent une série portant sur le rendement actuel des obligations d'Etat non amortissables ou perpétuelles (c'est-à-dire de celles dont la date de remboursement n'est pas fixée mais qui sont ordinairement amorties à la suite d'une décision de l'Etat).

Tableau 48 : Les données représentent les taux pratiqués par la Banque centrale à l'escompte, ou pour avance de fonds, dans toute transaction portant sur des effets négociables, soit effets commerciaux ou obligations du gouvernement détenus par les banques commerciales ou les courtiers. Pour les pays où il existe plus d'un taux valide pour de telles transactions, le tableau indique le taux que la banque centrale semble pratiquer pour la plupart de ces opérations. L'importance de ces taux dans le contrôle monétaire varie considérablement d'un pays à l'autre et toute comparaison doit être faite avec réserve.

Tableau 49 : Les taux indiqués représentent le marché monétaire à court terme—le taux auquel les emprunts à court terme sont effectués entre les institutions financières, ou le taux auquel les effets publics à court terme sont émis ou négociés sur le marché. Ces taux sont normalement dénommés *taux du marché monétaire* et *taux des bons du Trésor*, respectivement.

Tableau 50 : Les indices des cours des actions se rapportent principalement aux actions ordinaires qui font l'objet de transactions à la bourse principale ou aux bourses principales de chaque pays et qui ont été réunies en un échantillon aussi représentatif que possible de sociétés inscrites.

Les indices visent à mesurer l'augmentation de la valeur d'un portefeuille identique à l'ensemble des actions comprises dans l'indice, dont la composition n'est changée que par la substitution de nouvelles actions en remplacement de celles qui sont retirées du marché, et qui n'aurait été augmentée que du nombre d'actions additionnelles acquises par conversion des droits, warrants et dividendes distribués à partir de l'année choisie comme base.

Data definitions

A

agricultural production index: Based on the sum of price-weighted quantities of different agricultural commodities produced after deductions of quantities used as seed and feed weighted in a similar manner. All the indices at the country, regional and world levels are calculated by the Laspeyres formula. Production quantities of each commodity are weighted by average international commodity prices in the base period and summed for each year. To obtain the index, the aggregate for a given year is divided by the average aggregate for the base period. The commodities covered in the computation of indices of agricultural production are all crops and livestock products originating in each country. Practically all products are covered, with the main exception of fodder crops (1*, 2003, p. xvii).

agricultural products: CPC Vers.1.1 (7), divisions 1 and 2: cereals, vegetables, fruit and nuts, oil seeds and oleaginous fruit, living plants, cut flowers and flower buds, flower seeds and fruit seeds, vegetable seeds, beverages and spice crops, unmanufactured tobacco, sugar beet and sugar cane, raw vegetable materials not elsewhere classified, live animals and animal products.

A consumer price index is estimated as a series of summary measures of the period-to-period proportional change in the prices of a fixed set of consumer goods and services of constant quantity and characteristics, acquired, used or paid for by the reference population. Each summary measure is constructed as a weighted average of a large number of elementary aggregate indices. Each of the elementary aggregate indices is estimated using a sample of prices for a defined set of goods and services obtained in, or by residents of, a specific region from a given set of outlets or other sources of consumption goods and services (3, chap.7). *See also* index numbers, Laspeyres.

Goods simply being transported through a country (goods in transit) or temporarily admitted (except for goods for inward processing) do not add to the stock of material resources of a country and are not included in the international merchandise trade statistics. In many cases, a country's economic territory largely coincides with its customs territory, which is the territory in which the customs law of a country applies in full (11, paras, 14 and 66).

They represent each holder's assured and unconditional right to obtain other reserve assets, especially foreign exchange (22, para. 11.67). The SDR is the unit of account for the Fund. The value of the SDR is determined daily by IMF on the basis of a basket of currencies with each currency assigned a weight in the determination of that value. In the derivation of the SDR value, the currencies of the basket are valued at their market exchange rates for the US dollar, and the US dollar equivalents of each of the currencies are summed to yield the rate of the SDR in terms of the US dollar. As of January 1, 2001, the SDR valuation basket weights are the sum of the values of the amount of each currency in the following amounts: US dollar, 45 per cent; euro, 29 per cent; Japanese yen, 15 per cent, and pound sterling, 11 percent (4, Introduction, sect. 1).

Les chômeurs, selon la définition large, comprennent toutes les personnes des deux sexes ayant dépassé un âge spécifié qui, au cours de la période de référence spécifiée, étaient "disponibles pour un emploi salarié" ou "disponibles pour un emploi non salarié" tels que définis ci-après.

Les "personnes disponibles pour un emploi salarié" (au sens large) comprennent toutes les personnes entrant dans les catégories suivantes : a) toutes les personnes cherchant un emploi rémunéré selon la définition étroite; b) les personnes sans travail, disponibles pour prendre un travail rémunéré, mais qui n'avaient pas cherché de travail rémunéré au cours de la période récente spécifiée, pour une ou plusieurs raisons : elles pensaient qu'il n'était pas offert de travail rémunéré qui leur convienne, elles ne savaient pas où chercher du travail rémunéré, elles attendaient le résultat des candidatures qu'elles avaient déposées, elles attendaient d'être rappelées au travail, elles attendaient le début de la campagne agricole, ou encore pour d'autres raisons spécifiées.
2. Les personnes absentes de leur emploi, en congé ou licenciées, n'ayant pas de liens forts avec leur emploi, qui ne recherchaient pas de travail rémunéré au cours de la période récente spécifiée, sont à inclure parmi les personnes disponibles pour un travail rémunéré au sens de la définition large si elles sont au moment considéré disponibles pour un travail rémunéré.

coût, assurance et fret (CAF) : Le vendeur doit payer les frais et le fret nécessaires pour acheminer la marchandise au port de destination désigné, mais le risque de perte ou de dommage que peut courir la marchandise, comme le risque

de frais supplémentaires né d'événements intervenant après que la marchandise a été livrée à bord du navire, est transféré du vendeur à l'acheteur quand la marchandise passe le bastillage du navire au port d'embarquement. Le vendeur doit en outre fournir une assurance maritime contre le risque, pour l'acheteur, de perte ou de dommage que peut courir la marchandise au cours du transport. Le vendeur contracte l'assurance et paie la prime d'assurance.

L'acheteur notera que selon ce terme, le vendeur n'est tenu de souscrire l'assurance que pour une couverture minimum.

Le terme CAF exige du vendeur qu'il dédouane la marchandise à l'exportation. Ce terme ne peut être utilisé que pour le transport par mer et par voies navigables intérieures (11).

droits de tirage spéciaux (DTS) : Les DTS sont des avoirs de réserve internationaux créés par le FMI et alloués à ses pays membres pour compléter les réserves dont ils disposent. Ils confèrent à chaque détenteur un droit garanti et inconditionnel d'obtenir d'autres avoirs de réserve, tout particulièrement des devises (22, par. 11.67). Le DTS est l'unité de compte du FMI. Sa valeur est déterminée chaque jour par le Fonds sur la base d'un panier de monnaies, chacune d'elles étant affectée d'un coefficient pour ce calcul. Lors de l'établissement de la valeur du DTS, les monnaies du panier sont évaluées à leur taux du marché par rapport au dollar É.-U., et les équivalents en dollars É.-U. de chacune des monnaies sont additionnés de manière à obtenir la valeur du DTS en dollars É.-U. Depuis le 1er janvier 2001, les coefficients de pondération affectés aux monnaies du panier servant au calcul de la valeur du DTS sont les suivants : dollar É.-U. 45 %; euro 29 %; yen 15 %; livre sterling 11 % (4, Introduction, sect. 1).

E

électricité : Forme d'énergie qui se manifeste soit statiquement soit dynamiquement au niveau des particules élémentaires et des corps macroscopiques (6). CPC version 1.1 (7) : énergie électrique (Classe 1710). L'électricité peut être d'origine hydraulique, classique, thermique, nucléaire, géothermique, solaire, marémotrice, etc. Entrent également dans cette classe les centrales électriques qui, tout en produisant pour l'entreprise dont elles dépendent, vendent une grande quantité d'électricité à d'autres, et dont la production peut être mesurée séparément des autres unités de l'entreprise principale (16, classe 4010).

estimation de la population totale : La population totale d'un pays se compose soit de toutes les personnes résidant habituellement dans le pays (population de droit), soit de l'ensemble des personnes présentes dans le pays au moment du recensement (population de fait). Aux fins de comparaisons internationales, il est recommandé de se servir de la définition correspondant à la population de fait (18).

F

La richesse en minerai de fer est fonction du poids du minerai; le minerai peut contenir différentes teneurs en métal. CPC version 1.1 (7) (groupe 411) : fonte basique et acier.

franco à bord (FOB) : Le vendeur a rempli son obligation de livraison quand la marchandise passe le bastingage du navire au port d'embarquement désigné. H

houille : La houille est un charbon ayant subi un degré élevé de houillification dont le pouvoir calorifique brut est supérieur à 24 MJ/kg (5 700 kcal/kg) (valeur mesurée pour un combustible exempt de cendres, mais humide) et dont le pouvoir réflecteur de la vitrine est égal ou supérieur à 0,5. Les fines, les poussières et les autres produits charbonniers de qualité inférieure, qui ne peuvent être classés suivant le type de charbon dont ils proviennent, sont inclus dans la catégorie « houille ». [Source : Nations Unies, Statistiques de l'énergie : Définitions, unités de mesure et facteurs de conversion. Série F, no 44 (publication des Nations Unies, numéro de vente : F.86.XVII.21)]. La houille comprend les

catégories suivantes : i) le charbon à coke; ii) le charbon bitumineux et l'anthracite (charbon vapeur). Le charbon à coke est une houille dont la qualité permet de produire du coke susceptible d'alimenter les hauts fourneaux. Le charbon vapeur sert à la production de vapeur et au chauffage des locaux et comprend tous les types de charbons anthraciteux et bitumineux autres que les charbons à coke.

I

immatriculations de véhicules automobiles neufs :

Immatriculations de véhicules automobiles neufs à usage privé et commercial mis en circulation pour la première fois (21, p. 253).

indice de la production agricole : L'indice de la production agricole est fondé sur la somme des quantités (pondérées par les prix) des différents produits agricoles, après déduction des quantités utilisées comme semences ou aliments pour animaux (pondérées de la même façon). La formule utilisée pour le calcul de tous les indices, aux niveaux national, régional ou mondial, est celle de Laspeyres. La production de chaque produit est pondérée par la moyenne des cours internationaux du produit pendant la période de base et les quantités produites chaque année sont additionnées. Pour obtenir l'indice, on divise la production totale pour une année donnée par la production moyenne de la période de base. Les produits pris en compte dans le calcul de l'indice de la production agricole sont l'ensemble des produits de l'agriculture et de l'élevage de chaque pays. La quasi-totalité des produits est prise en compte, la principale exception étant les aliments pour animaux (1, 1995, p. ix).

indice de la production industrielle : Indice de Laspeyres de la valeur ajoutée totale de l'ensemble de la production industrielle, où la valeur ajoutée se définit comme la valeur de la production moins les valeurs de la consommation intermédiaire et de la consommation de capital fixe.

indice de la production vivrière : Entrent dans la production vivrière tous les produits jugés comestibles, qui contiennent des nutriments. Le café et le thé en sont donc exclus, n'ayant pratiquement pas de valeur nutritive (1, p. ix).

indice de Laspeyres : Forme d'indice établi en affectant aux prix, quantités ou autres unités de mesure un coefficient de pondération calculé sur la période de référence (5).

indice de la valeur unitaire : La valeur des biens ou services homogènes est égale à leur prix par unité de quantité multiplié par le nombre de ces unités. Elle est indépendante du choix de l'unité de quantité. L'indice de Laspeyres de la valeur unitaire est le prix de transaction moyen d'une unité (22, par. 16.9 et 16.13).

indice de la valeur unitaire à l'importation (ensemble des marchandises) : La valeur des biens ou des services homogènes est égale à leur prix par unité de quantité multiplié par le nombre de ces unités. La valeur est indépendante de l'unité de quantité choisie. L'indice de la valeur unitaire de Laspeyres correspond au prix de vente effectif moyen par unité. (22, par. 16.9 et 16.13). *Voir également* produits d'importation et indice de Laspeyres.

indice de la valeur unitaire à l'exportation (ensemble des marchandises) : La valeur des biens homogènes est égale à leur prix par unité de quantité multiplié par le nombre de ces unités. La valeur est indépendante de l'unité de quantité choisie. L'indice de la valeur unitaire de Laspeyres correspond au prix de vente effectif moyen par unité (22, par. 16.9 et 16.13). *Voir également* produits d'exportation et indice de Laspeyres.

indice des prix à la consommation (ensemble des marchandises) : Mesure des variations au cours du temps du niveau général des prix des biens et services acquis, utilisés ou payés par la population de référence pour sa consommation. Cet indice est estimé à partir d'une suite de mesures synthétiques des variations relatives, d'une période à l'autre, des prix d'un ensemble fixe de biens et de services de consommation constants en quantité et par leurs caractéristiques, acquis, utilisés ou payés par la population de référence. Chaque mesure synthétique est obtenue comme une moyenne pondérée d'un grand nombre d'indices de prix d'agrégats élémentaires. L'indice de chaque agrégat élémentaire est estimé au moyen d'un échantillon de prix pour un ensemble fixe de biens et de services que se procurent les individus de la population de référence dans une région donnée, ou qui habitent cette région, auprès d'un ensemble spécifié de points de vente ou auprès d'autres fournisseurs de biens et de services de consommation (3, chap. 7). *Voir également* indice de Laspeyres.

indice des prix à la consommation (produits alimentaires) : Mesure des variations au cours du temps du niveau général des prix des produits alimentaires acquis, utilisés ou payés par la population de référence pour sa consommation (3, chap. 7). *Voir également* indice de Laspeyres.

indices des prix à la production : Montant que le producteur reçoit de l'acheteur pour une unité de bien ou de service produite, diminuée de toute taxe sur la valeur ajoutée, ou de tout impôt déductible similaire, facturée à l'acquéreur. Il exclut tout frais de transport facturés séparément par le producteur (22, par. 6.205). En principe, l'IPP devrait inclure les services, mais en pratique il ne recouvre que l'agriculture et l'industrie. L'indice doit être établi à partir des prix sortis d'exploitation pour le secteur agricole et des prix départ-usine pour le secteur industriel. Les indices sont établis à partir de la formule de Laspeyres, sauf indication contraire dans les notes concernant chaque pays. On fait parfois figurer à cette section des sous-indices se rapportant à l'IPP (4, p. XVI). *Voir également* indice de Laspeyres.

indices des prix des biens importés : *Voir* produits d'importation, indices des prix à la production et des prix de gros.

indice du volume des importations (ensemble des marchandises) : Indice fondé sur des unités de quantité des biens, telles que le nombre ou le poids (11, chap. V; 22, chap. XVI). *Voir également* indice de Laspeyres.

indice du volume des exportations (ensemble des marchandises) : Indice fondé sur des unités de quantité des biens, telles que le nombre ou le poids (11, chap. V; 22, chap. XVI). *Voir également* indice de Laspeyres.

industries extractives : Extraction, préparation et enrichissement des minéraux que l'on rencontre dans la nature à l'état solide (charbon et minerais par ex.), à l'état liquide (pétrole brut par ex.), ou gazeux (gaz naturel par ex.). On comprend dans les industries extractives les mines souterraines et à ciel ouvert, les carrières et les puits, ainsi que toutes les activités complémentaires nécessaires pour le traitement et l'enrichissement de minerais et autres minéraux bruts, telles que le concassage, le criblage, le débouillage, l'égrappage, le triage, le broyage, la flottation, la fusion, le bouletage, l'étêtage et autres opérations propres à rendre les produits commercialisables (17, p. 27).

industries manufacturières : Activités recensées à la catégorie de classement D et aux divisions 15 à 37 de la Classification internationale type, par industrie, de toutes les branches d'activité économique (troisième révision). Les industries manufacturières ont pour objet la transformation physique ou chimique de matériaux et composants en de nouveaux produits, que l'activité de transformation soit effectuée par des machines automatiques ou manuellement, qu'elle ait lieu dans une usine ou au domicile du travailleur, que les produits résultants soient vendus en gros ou au détail. Les activités manufacturières recouvrent également l'assemblage des composants constituant les produits manufacturés et les activités de recyclage (16).

L

logement : Local d'habitation distinct et indépendant qui est destiné à être occupé par un ménage ou qui est occupé par un ménage au moment du recensement sans y avoir été destiné à l'origine. Il faut entendre une pièce ou un ensemble de pièces et leurs annexes dans un immeuble permanent ou une partie distincte du point de vue structural dudit immeuble, qui, étant donné la manière dont il a été construit, reconstruit ou transformé, est destiné à servir d'habitation à un ménage et n'est pas entièrement utilisé à d'autres fins. Un tel logement doit avoir une entrée indépendante d'où l'on ait accès (soit directement, soit par un jardin ou un terrain) à une rue ou un passage commun dans le bâtiment (escalier, couloir, vestibule, etc.) (19, par. 2.331 à 2.333).

Le fret débarqué comprend aussi les marchandises entrant dans les entrepôts de douane ou en sortant (21, p. 254 et 255).

marchandises embarquées : Poids de l'ensemble des marchandises (y compris l'emballage) et du bétail, qui ont été soit chargés, dans les ports du pays concerné, à bord de navires nationaux ou étrangers aux fins d'être débarqués dans un autre pays, soit débarqués de navires nationaux ou étrangers après avoir été embarqués dans un autre pays. Le fret embarqué comprend aussi les marchandises entrant dans les entrepôts de douane ou en sortant (21, p. 254 et 255).

matières premières : Produits alimentaires et boissons, approvisionnements industriels, combustibles et lubrifiants n'ayant pas subi de transformation et essentiellement destinés à l'industrie (8, p. 2).

minerais de fer : CPC version 1.1 (7), groupe 141 : minerais de fer et leurs concentrés, autres que les pyrites de fer grillées.

monnaie, quasi-monnaie : La monnaie au sens étroit comprend les dépôts à vue transférables des autorités monétaires et les dépôts des banques créatrices de monnaie (M1), autres que ceux de l'administration centrale, ainsi que la circulation fiduciaire hors banques créatrices de monnaie, et, le cas échéant, les dépôts à vue du secteur privé auprès du système postal et du Trésor. La quasi-monnaie comprend les dépôts à terme, d'épargne et en devises des secteurs résidents autres que l'administration centrale. La somme monnaie + quasi-monnaie est souvent désignée par l'abréviation M2 (4, Introduction, sect. 4). Voir Base monétaire.

O

P

papier journal : Papier écrit non collé ou très légèrement collé, non enduit, du type utilisé pour l'impression des journaux, d'un poids au mètre carré compris entre 45 à 60 grammes et dont 70 % au moins en poids de la composition fibreuse totale sont constitués par des fibres de bois obtenues par un procédé mécanique (21, p. 140). CPC version 1.1 (7) : papier journal (sous-classe 32121).

période de base : La période de base est la période où ont été collectées les données utilisées comme base pour un indice ou un autre ratio. Elle est souvent d'une année, mais peut être d'une journée, ou à l'inverse la moyenne d'un groupe d'années (5).

personnes pourvues d'un emploi rémunéré : Ce sont : les personnes qui durant la période de référence ont effectué un travail moyennant un salaire ou un traitement en espèces ou en nature; les personnes qui, ayant déjà travaillé dans leur emploi actuel, en étaient temporairement absentes durant la période de référence et avaient un lien formel avec leur emploi, tel le service ininterrompu du salaire ou du traitement, une assurance de retour au travail à la fin de la situation d'exception ou un accord sur la date du retour après la courte période d'absence, etc.; les personnes qui durant la période de référence ont effectué un travail en

vue d'un bénéfice ou d'un gain familial, en espèces ou en nature; les personnes qui, durant la période de référence, avaient une entreprise qui peut être une entreprise industrielle, un commerce, une exploitation agricole ou une entreprise de prestation de services, mais n'étaient temporairement pas au travail pour toute raison spécifique (3).

pétrole brut : CPC version 1.1 (7) : huiles de pétrole et de minéraux bitumineux, autres que les huiles brutes; préparations non classées ailleurs contenant en poids 70 % ou plus d'huiles de pétrole ou de minéraux bitumineux et dont ces huiles constituent l'élément de base (groupe 333). Huiles brutes de pétrole ou de minéraux bitumineux (classe 1201).

pneumatiques (véhicules à moteur) : Pneumatiques ou bandages pleins en caoutchouc servant à enrober les roues des véhicules (16, sect. 2511). CPC version 1.1 (7) : pneumatiques et chambres à air (groupe 361).

population, estimation en milieu d'année : L'estimation de la population en milieu d'année, qui vise la population de fait au 1er juillet, est celle que fournissent les bureaux nationaux de statistique (10, notes du tableau 3).

position de réserve au FMI : Position dans la tranche de réserve et position créditrice d'un membre au titre des différents accords d'emprunt. La position de réserve d'un membre au FMI a les caractéristiques d'avoirs de réserve. La position d'un membre dans la tranche de réserve au Fonds est déterminée a) par le paiement d'une partie de sa quote-part en avoirs de réserve, et b) par l'utilisation nette faite par le Fonds de la monnaie de ce membre. La position d'un membre dans la tranche de réserve est normalement égale à sa quote-part moins les avoirs ajustés du Fonds dans sa monnaie, moins les quotes-parts à recevoir, moins les soldes détenus dans les comptes administratifs du Fonds sous réserve qu'ils ne dépassent pas, s'ils sont positifs, 0,1 % de la quote-part de ce membre (4).

production industrielle : Production des établissements industriels : industries extractives, industries manufacturières, production et distribution d'électricité, de gaz et d'eau (14).

produits agricoles : CPC version 1.1 (7), divisions 1 et 2 : céréales, légumes, fruits, même à coques, huiles et fruits oléagineux, plantes vivantes, fleurs et boutons de fleurs coupées, graines de plantes cultivées principalement pour leurs fleurs ou leurs fruits, graines de légumes, épices et cultures pour boissons, tabacs bruts ou non fabriqués, betteraves à sucre et cannes à sucre, matières premières végétales non classées ailleurs, animaux vivants et produits du règne animal.

produits d'exportation : Biens dont la sortie du territoire économique fait diminuer le stock des ressources matérielles. Dans le système du commerce général, le territoire statistique d'un pays coïncide avec son territoire économique (11, par. 14 à 66).

produits d'importation : Biens dont l'entrée sur le territoire économique fait augmenter le stock des ressources matérielles du territoire économique du pays considéré. Les biens simplement transportés à travers le pays (biens en transit) ou admis ou expédiés temporairement (à l'exception des biens destinés au perfectionnement actif) ne font pas augmenter le stock des ressources matérielles d'un pays et ne sont donc pas à inclure dans les statistiques du commerce international. Dans de nombreux cas, le territoire économique d'un pays coïncide pratiquement avec son territoire douanier, c'est-à-dire le territoire sur lequel la législation douanière s'applique de plein droit (11, par. 14 et 66).

produits industriels : Biens produits par les unités institutionnelles résidentes dans les industries extractives, les industries de transformation et dans les secteurs de l'électricité, du gaz et de l'eau (22, par. 6.238).

S

salaires, traitements : Les taux de salaires doivent comprendre le salaire de base, les allocations de vie chère et les autres allocations garanties et versées régulièrement, mais ne doivent pas comprendre les heures supplémentaires, les primes et gratifications, les allocations familiales et les autres versements de sécurité sociale effectués par les employeurs. Les statistiques relatives aux salaires doivent porter sur les salaires bruts, c'est-à-dire sur le total avant déduction éventuelle par l'employeur des impôts et des cotisations de sécurité sociale et de retraite à la charge des travailleurs, des cotisations d'assurance-vie, des cotisations syndicales et autres prélèvements à la charge des travailleurs. Les statistiques de salaires peuvent porter sur le salaire horaire, journalier, hebdomadaire ou mensuel. Les salaires correspondent à la rémunération en espèces et en nature versée aux salariés, généralement à intervalles réguliers, pour les heures de travail ou le travail accompli, ainsi que pour les heures non ouvrées (congé annuel, et autres congés ou jours fériés payés). Le programme de statistiques courantes répondant aux besoins à court terme devrait porter sur les éléments suivants : a) statistiques du salaire et des horaires de travail moyens (y compris, si possible, des heures effectivement ouvrées); b) statistiques des taux de salaires au temps et des heures normales de travail. Le programme de statistiques autres que courantes livrant des données de base et d'autres données détaillées répondant aux besoins à plus long terme et aux besoins permanents devrait porter sur les éléments suivants : a) statistiques de la structure et de la distribution des salaires; b) statistiques du coût de la main-d'oeuvre (3).

surface de plancher : Somme de la superficie de tous les planchers d'un immeuble délimités par le bord externe des parois externes et comprenant la surface des entrées, des caves, des cages d'ascenseur et, dans les immeubles comportant plusieurs logements, toutes les parties communes. La surface des balcons n'est pas comptée (21, p. 168).

T

taux brut de mortalité : Il s'agit généralement d'un taux annuel, qui est le quotient du nombre annuel des décès observés dans une population au cours d'une année civile, divisé par l'effectif exposé au risque de décès pendant la même période, soit l'effectif moyen de cette population (18, par. 401). Le Décès est la Disparition permanente de tout signe de vie à un moment quelconque postérieur à la naissance vivante (cessation des fonctions vitales après la naissance sans possibilité de réanimation). Cette définition ne comprend donc pas les morts foetales (20, par. 46, (2)).

taux brut de natalité : Le taux brut de natalité, généralement exprimé en taux pour mille, est obtenu en divisant le nombre des naissances dans une population par le nombre d'années-homme vécue par la population au cours de la même période, dont l'approximation généralement utilisée est l'effectif de la population au point médian de la période multiplié par le nombre d'années de la période (18). Naissance vivante est l'expulsion ou extraction complète du corps de la mère, indépendamment de la durée de la gestation, d'un produit de la conception qui, après cette séparation, respire ou manifeste tout autre signe de vie, tel que battement de coeur, pulsation du cordon ombilical ou contraction effective d'un muscle soumis à l'action de la volonté, que le cordon ombilical ait été coupé ou non et que le placenta soit demeuré ou non attaché (23, définition 3.1).

taux de change : Le taux de change est le prix, dans une monnaie donnée, auquel peuvent être achetés des billets dans une autre monnaie (6). Pour les taux moyens d'une période, les données sont soit la moyenne mensuelle des taux du marché ou des taux officiels du pays qui communique les données, ou, à défaut, la moyenne mensuelle des taux cotés à New York; à défaut de ces taux, on se sert d'estimations basées sur les moyennes simples des taux de fin de mois cotés par le pays qui communique les données (4, Introduction, sect. 1).

tissus de coton : CPC version 1.1 (7), groupe 266 : tissus (à l'exclusion des tissus spéciaux) contenant du coton.

Elles comprennent les avoirs des autorités monétaires en DTS, leur position de réserve au FMI, les avoirs en devises, les instruments financiers dérivés, et l'or au prix du marché (4, Introduction, sect. 3).

V

valeur d'exportation (ensemble des marchandises) : Base semblable à celle de la valeur d'importation. Voir valeur d'importation.

valeur d'importation (ensemble des marchandises) :

“Valeur transactionnelle, c'est-à-dire le prix effectivement payé ou à payer pour les marchandises lorsqu'elles sont vendues pour l'exportation à destination du pays d'importation [...], pour autant : (a) Qu'il n'existe pas de restrictions concernant la cession ou l'utilisation des marchandises par l'acheteur, autres que les restrictions qui : (i) Sont imposées ou exigées par la loi ou par les autorités publiques du pays d'importation; (ii) Limitent la zone géographique dans laquelle les marchandises peuvent être revendues; ou (iii) N'affectent pas substantiellement la valeur des marchandises; (b) Que la vente ou le prix n'est pas subordonné à des conditions ou à des prestations dont la valeur n'est pas déterminable pour ce qui se rapporte aux marchandises à évaluer; (c) Qu'aucune partie du produit de toute revente, cession ou utilisation ultérieure des marchandises par l'acheteur ne revient directement ou indirectement au vendeur, sauf si un ajustement approprié peut être opéré en vertu des dispositions de l'article 8; et (d) Que l'acheteur et le vendeur ne sont pas liés ou, s'ils le sont, que la valeur transactionnelle est acceptable à des fins douanières [...]” (11, annexe C, d'après l'Accord de l'Organisation mondiale du commerce relatif à l'évaluation).

véhicules automobiles : CPC version 1.1 (7) : voitures de tourisme et autres véhicules principalement conçus pour le transport des personnes (autres que les véhicules automobiles pour le transport en commun des personnes, les véhicules spécialement conçus pour se déplacer sur la neige et les véhicules spéciaux pour le transport des personnes sur les terrains de golf et véhicules similaires) (sous-classe 49113).

2007 Industrial Commodity Statistics Yearbook, Vol. I and II

Series P, No. 47, \$160

Sales Number: B.10.XVII.12

The *2007 Industrial Commodity Statistics Yearbook* is the forty-first in a series of annual compilations of statistics on world industry designed to meet both the general demand for information of this kind and the special requirements of the United Nations and related international bodies.

The *Yearbook* provides statistics on the production of about 600 major industrial commodities. Data are provided for a ten-year period and for approximately 200 countries and territories. The commodities have been selected on the basis of their importance in world production and trade.

This edition of the *Yearbook* is the third to provide data on the value of industrial production, in addition to quantities of industrial production that have been the scope of previous editions of the *Yearbook*. The *Yearbook* is therefore organized in two volumes: Volume I: Physical Quantity Data and Volume II: Monetary Value Data.

Annexes to the publication provide information to assist the user, including an index of commodities in alphabetical order, as well as a table of correspondence among the CPC-based commodity codes and the International Standard Industrial Classification (ISIC), Rev.3.1, the Harmonized System (HS) 2002 and Prodcom 2002.

2008 International Trade Statistics Yearbook, Vol. I and Vol. II

Series G, No. 57, \$115

Sales Number: B.10.XVII.6H

The *International Trade Statistics Yearbook* (2008 ITSY) is issued in two redesigned volumes which were prepared at different points in time during 2009. Volume I has been compiled early in 2009 (in May 2009) to allow for an advanced release of an overview of international merchandise trade in 2008 and for a much earlier publication of the available 2008 country (area) data. Overall, data for a total of 173 countries (or areas) are shown in Volume I. Volume II which contains detailed tables showing international trade for 258 individual commodities (3-digit SITC groups) and eleven world trade tables covering trade values and indices has been compiled approximately six months after the submission of Volume I (in December 2009) as the preparation of

these tables requires and benefits from the additional country data which, normally, become available later in the year. Volume II contains updated versions of the two world trade tables A and D published in Volume I. The redesign of the *International Trade Statistics Yearbook* was aimed to provide a more analytical and condensed view of the exports and imports of individual countries (country trade profiles in Volume I) and of specific commodities (commodity trade profile in Volume II).

All tables and contents of Volume I and Volume II are made available electronically shortly after completion of the manuscript. The detailed information about the trade of particular countries by commodity and partner (values and quantities) contained in the tables and graphs for individual countries in Volume I and commodities in Volume II has been taken from the publicly available database UN Comtrade (<http://comtrade.un.org/>). Users are advised to visit UN Comtrade for any additional and more current information as it is continuously updated.

The World's Women 2010: Trends and Statistics

Series K, No. 19, 255 pages, \$30

Sales Number: E.10.XVII.11

The World's Women 2010: Trends and Statistics presents statistics and analysis on the status of women and men in the world, highlighting the current situation and changes over time. It was prepared to coincide with and in observance of the first-ever World Statistics Day, 20.10.2010. The report is the fifth in the series which has been published every five years, as called for in the Beijing Platform for Action adopted at the Fourth World Conference on Women in 1995. As in the past editions, the presentation is made in a format and language that non-specialists can readily understand.

The World's Women 2010 reveals that progress towards the goal of gender equality has been made in the last two decades in a number of areas, although uneven and, for the most part, quite modest. In some areas it is clear that there is a long way to go before gender equality is achieved. These are elaborated in the following eight chapters of the report, each representing a broad area of concern: population and families, health, education, work, power and decision-making, violence against women, environment and poverty. A wide selection of the statistics and indicators at the country level are presented in the Statistical Annex of the report.
