National Accounts

Remote Meeting March 7-10, 2022 BOPCOM—22/11 SNA/M1.22/11 For discussion

CM.1 An Assessment Framework to Measure Alignment with the Economic Accounting Statistical Standards

CM.1 An Assessment Framework to Measure Alignment with the Economic Accounting Statistical Standards^{1,2}

The international community has developed several economic accounting statistical standards (EASSs) such as the System of National Accounts (SNA), the Balance of Payments Manual (BPM), and the Government Finance Statistics Manual (GSFM) to assist countries in developing internationally consistent macroeconomic statistics. One important feature of these standards is their ability to facilitate the comparison of estimates across countries. For users to be confident when making these cross-country comparisons, they need some assurance that the countries they are comparing have implemented these standards consistently. However, for several reasons, when countries use an economic accounting standard to compile macroeconomic statistics, a certain degree of choice, freedom and variation can be taken in implementing the recommendations. This results in varying degrees of 'alignment' to the EASSs across countries. This guidance note (GN) proposes an alignment framework that countries can use to assess the alignment of their national economic statistics to the EASSs. The framework is structured around the key building blocks of the statistical standards – concepts, accounting rules, methods, classifications, and the resulting accounts and / or tables that are produced and published.

INTRODUCTION

- 1. The degree of alignment with economic accounting statistical standards (EASSs) provides two important signals to users. First, it provides information about the quality of cross-country comparisons, and second, it signals to users the extent to which major revisions should be expected in the future, in cases where an economy is not aligned with the EASSs. Additionally, this helps producers of statistics to identify areas for improvement, prioritize resources, and formulate strategic plans, assist users to make appropriate adjustments to achieve comparability in their analyses, among others.
- 2. **Currently, alignment with EASSs is somewhat arbitrary and self-imposed.** That is, each country declares whether it is compliant or non-compliant. With the launch of the updates to the *System of National Accounts, 2008 (2008 SNA)* and the *Balance of Payments and International Investment Position Manual, 6th Edition (BPM6),* it is important to move away from this arbitrary approach. The next update of EASSs should include a set of internationally

¹ Prepared by Mr. Charles Sessede (AfDB), Mr. James Tebrake, Ms. Francien Berry, Ms. Kristy Howell and Mr. David Bailey (IMF), and Mr. Eric Metreau (World Bank) (primary drafters). The work, including drafting was undertaken under the supervision of Mr. Sanjiv Mahajan (United Kingdom: Chair, CMTT).

² This note was presented at the IMF's Balance of Payments Committee (BOPCOM) meeting on October 28, 2021. In addition to other comments (not yet taken on board), some members highlighted that the previous terminology "*international economic statistical standards" did not* adequately reflect the range of national and international macroeconomic statistics. The current proposed terminology is "Economic Accounting Statistical Standards.

accepted frameworks that provide structured, systematic, and consistent methods to measure an economy's alignment to EASSs. It is noted that supported by various statistical legislation, European Union (EU) Member States have a high degree of alignment with various international statistical standards and those specifically adapted for the EU.

- 3. Therefore, in the context of the update of the 2008 SNA and BPM6, it is an opportune time to consider the guidance provided to national authorities regarding the way they communicate their alignment with EASSs to users. An internationally adopted framework that presents a country's alignment to a statistical standard would assist users by allowing cross-country comparisons and anticipate the likely size and extent of future updates to macroeconomic statistics. While such a framework could take many different forms, this GN proposes three key alignment frameworks for the SNA, GFS, and BOP domains that are structured around the key building blocks of an EASS concepts, accounting rules, methods, classifications, and the resulting accounts and / or tables that are produced and published. These proposed frameworks draw heavily on existing assessment frameworks such as the IMF's Data Quality Assessment Framework, the UN's Data Quality Assessment Framework and the ISWGNA's Minimum Required Data Set (MRDS). The intent is to add this assessment framework to each of the EASSs (SNA, BPM and GFSM) and for countries to periodically assess their macroeconomic statistics programs against these frameworks.
- 4. **This guidance note (GN) contains two parts:** (i) three proposed frameworks that countries can use to assess their alignment to the concepts, methods, accounting rules, classifications, and accounts/tables associated with a given economic accounting statistical guidance; and (ii) a means to present and communicate this information to users in a standardized manner.
- 5. The Communication Task Team proposes that the recommendations in this GN are included as part of a chapter to the SNA, BPM, and GFSM titled "Economic statistics Communication Practices and Recommendations."

EXISTING MATERIAL

6. The GN draws upon several existing frameworks already developed by international organizations. The components of the proposed assessment framework are based primarily on the IMF's Data Quality assessment Framework (DQAF) and the United Nations National Accounts Questionnaire (UN-NAQ).³ The IMF's DQAF provides a framework for qualitative self-assessments (among other types) of an economy's macroeconomic statistics.

³ See https://dsbb.imf.org/content/pdfs/dgrs_nag.pdf and https://unstats.un.org/unsd/statcom/doc11/2011-6-NationalAccounts-E.pdf

Although the DQAF outlines six elements of quality⁴, the CMTT's proposed framework centers primarily on the methodological soundness component. Using the NAQ, the UNSD 'evaluates' the availability, scope, and coverage of national accounts data and the implementation of SNA 2008. "Conceptual compliance" with the *2008 SNA* is evaluated in terms of milestones and a Minimum Required Data Set (MRDS).^{5,6}

RECOMMENDED APPROACH

The proposed frameworks for measuring and communicating alignment to the EASSs do not require a change to either the SNA, BPM, or GFSM. Instead, the recommended frameworks are stand-alone tools intended for national statistical authorities and international agencies to assess the methodology and presentation underlying a country's (or group of countries') macroeconomic statistics. It is expected that the relevant framework would be included in a chapter of the SNA, BPM, and GFSM and that countries would be encouraged to use the frameworks and make the results publicly available for all users.

Alignment Framework

- 7. **Macroeconomic statistics have several different types of users and uses.** Primarily, they inform users about the performance and structure of the domestic economy. They also inform users about the performance and composition of the economy relative to other economies. For the latter to be achieved, users require some assurance that the statistics they are comparing across countries have been consistently compiled. If there are inconsistencies, users need to be aware of the major methodological differences in the data compiled by different economies.
- 8. Currently the SNA, BPM and GFSM do not include a framework that compilers can use to assess their country's alignment to the EASS. When countries communicate their alignment to a standard, it is usually done in the context of the version of the EASS used to produce the national estimates. While this is important information, it does not indicate the degree to which they implemented the recommendations contained in the relevant standard (or

⁴ DQAF elements: (i) prerequisites Quality, (ii) Integrity, (iii) Methodology, (iv) Accuracy and reliability, (v) Serviceability; and (vi) Reliability.

⁵ The milestones provide guidance to countries that are considering expanding the scope of their national accounts coverage in line with the recommendations of the SNA while also serving as a monitoring instrument permitting the measurement of the level of national accounts development at different points in time and the identification of countries that might benefit from capacity development assistance.

⁶ See for example UNSD developing a global programme for the implementation of the *2008 SNA* and supporting statistics: https://unstats.un.org/unsd/nationalaccount/docs/impPaper.pdf, UNSD Self-assessment evaluation of the status of National Accounts and Supporting Statistics: https://unstats.un.org/unsd/nationalaccount/docs/evaluation.doc, Report of the IMF Government Finance Statistics Advisory Committee, 2015 https://www.imf.org/external/pubs/ft/5fs/gfsac/gfsac15.pdf, and the BOPCOM Paper - Progress in Implementing BPM6 https://www.imf.org/external/pubs/ft/bop/2015/pdf/15-05.pdf.

version thereof). Users are therefore left to assume that all countries have implemented the standard to the same degree – either completely or not at all. This is not always the case and while countries may be using the same version of an EASS, the method and degree to which it is implemented may vary significantly. This impacts user's interpretation and the cross-country comparability of the estimates.

- 9. **To illustrate, consider two economies A and B.** Country A indicates it uses the *2008 SNA* to compile its national accounts but does not record cultivated biological assets. Country B, also *2008 SNA* compliant, records cultivated biological assets in its national accounts. Both economies comply with the latest EASS, however, the asset boundary in each country is slightly different. When comparing the investment data, balance sheets and productivity data of the two countries, it is important for the user to understand these differences. Country A may not record cultivated biological assets because they are not material for that economy, or they may be material but have no data. If this is the case, then this information should also be provided to users so that they do not attempt to compensate for the different treatment when making the cross-country comparisons. An internationally adopted and accepted alignment framework would assist users in making cross-country comparisons.
- 10. The term alignment is purposeful, as it is unrealistic to expect a country to fully 'comply' to an EASS. Economic structures, users' data needs, resources, statistical infrastructure, and source data vary across countries. Therefore, producers of statistics must weigh the needs of its users who may require a country specific accounting treatment with the need to ensure that the resulting data are internationally comparable. In other cases, a given activity/concept may be economically immaterial for a given country and therefore, for pragmatic and resourcing reasons, the recommendation is not implemented. While countries strive to 'align' to an EASS, most countries do not fully comply. As a result, a proposed framework needs flexibility to take into consideration that certain parts of the standard may not apply to a given economy or a given situation or the activity may exist but deemed not to be relevant for policy users within their jurisdiction.
- 11. The use of an alignment framework will facilitate cross-country comparisons as well as help users anticipate the potential impact of subsequent revisions to the statistics.⁷ For example, assume that a country undertakes a comprehensive revision where they introduce several conceptual and accounting changes to the macroeconomic accounts. Assume that change results in a 20 per cent increase in the level of GDP. A logical question a user may raise is whether there may be additional revisions at some point in the future and the scale of the revised estimates may be. If a country can demonstrate that its latest revision with the standard brings it fully in line with the current set of international recommendations –

5

⁷ The definition and types of revisions are discussed further in CMTT C.3. - *Taxonomy for Communicating Economic Statistics Releases, Products, and Product Updates*

users will have some assurance that future changes will be small. Although the concepts may be covered, this does not preclude other methodological or data source improvements.

- 12. An effective alignment framework should have some degree of flexibility and be easy to implement, update and communicate. While this framework can take many different forms, the CMTT recommends that the alignment framework be structured around the key components of an EASS. At a very high level an EASS consists of a set of: (1) concepts; (2) accounting rules; (3) methods; (4) classification systems; and (5) tables/accounts.
- 13. **Concepts are the foundation of an EASS.** They reflect the articulation of a macroeconomic idea, activity, interaction, state, or notion. Concepts determine what gets measured. Consider the concept of production in the 2008 SNA. The 2008 SNA §1.40 states that production is ".....a physical process, carried out under the responsibility, control and management of an institutional unit, in which labour and assets are used to transform inputs of goods and services into outputs of other goods and services. All goods and services produced as outputs must be such that they can be sold on markets or at least be capable of being provided by one unit to another, with or without charge. The SNA includes within the production boundary all production destined for the market, whether for sale or barter. It also includes all goods or services provided free to individual households or collectively to the community by government units or NPISHs." The concept of production, and the production boundary, in the SNA ultimately determines the size of a given economy. Other key concepts include income, assets, capital formation, expenditure, and consumption among others.
- 14. Accounting rules reflect the guidelines that macroeconomic compilers should follow when recording transactions and other economic flows. In the context of the EASSs, accounting rules determine how activities get recorded. For example, a key accounting rule in the 2008 SNA is the rule that transactions are recorded "on an accrual basis throughout" (2008 SNA § 3.163). The EASSs have numerous accounting rules related to the time of recording, valuation, consolidations and netting that should all be considered "in-scope" for an alignment framework.
- 15. **Methods are closely associated with accounting rules**. One way to interpret a method is to view it as the way a macroeconomic accountant implements an accounting rule or measures a concept. For example, one compiler may decide to use a series of price indices to derive an estimate of the market value for a stock of assets while another compiler may decide to obtain observed values recorded on the balance sheets of enterprises. Both are following the same valuation rule but are using different methods to apply the rule. The EASSs list several recommended methods related to valuation, the calculation of volumes that should be included in an alignment framework.
- 16. Classifications determine the level of detail that is presented to users. As discussed earlier, the concept of production in the *2008 SNA* determines what gets measured. At the limit, this could result in publication of a single (albeit very large) number. Presenting a

single estimate of production would not be very useful and would only lead to a series of additional questions from users such as which firms contributed the most to production? or which regions contributed the greatest share? Classifications facilitate a consistent and coherent presentation of detailed or granular information to users as well as a standard approach to aggregating the information.

- 17. The sequence of accounts / specific tables outline how information is presented to users. They specify the structure and terminology that should be adopted when communicating macroeconomic statistics to users. They also outline what information is provided to users. Most EASSs have already identified a set of accounts or tables that are considered the minimum requirements to declare alignment to a set of standards. Since this is both well-defined and widely used, it is proposed that this is incorporated into the alignment framework.
- 18. While the five categories noted above can serve as an overarching structure for the alignment framework some granularity is needed. Since a given EASS has many concepts, accounting rules, methods, classifications, and accounts/tables it is not possible or pragmatic to list them all within the framework a subset is required. Many users of macroeconomic statistics use the data to analyze and compare the structure and evolution of the economy over time and across jurisdictions. It seems appropriate that the individual items to be included in the framework focus on those categories that impact the interpretation and assessment of levels and growth rates. Using these criteria, an alignment checklist has been developed and included in Annex II of this guidance note for the SNA, GFSM and BPM.8 This is a preliminary list that requires refinement through a series of consultations. In addition, the final checklist that will be included in the updates SNA, BPM and GFSM can only be determined once decisions have been made regarding the concepts, accounting rules, methods, classifications, accounts to be included in the updated EASSs.

Communicating with Users

19. The previous section outlined an alignment framework that could be used to determine alignment with an EASS. This section of the note outlines how macroeconomic compilers can communicate this information to users. While some consideration may be given to the development of a scoring system / methodology, it is recommended that a dashboard approach be taken. Scoring a country's alignment to a statistical framework may create a disincentive to use the framework. In addition, any aggregate score would require some form of weighting mechanism which would introduce a high degree of subjectivity (i.e. is alignment to concepts more important than alignment to accounting rules) into the process. A dashboard that

⁸ The annex current reflects the preliminary framework/questions relevant for the SNA, BPM, and GFSM.

does not attempt to quantify or summarize the information will still provide useful information to users in a simple, straight forward, and flexible manner.

- 20. The starting point for the dashboard is the alignment framework presented in Annex II. While most of the items in the framework can be structured to solicit a "yes" or "no" response, it is felt that this would not provide the granularity users require to properly interpret the results nor would it provide the compiling country the flexibility it needs to properly convey the scope of its program. Since the framework is intended to measure the degree of alignment to a standard it was felt that the tool used to undertake the assessment should also include the notion of "degree". It is proposed that for each item on framework the compiling organization indicate whether they:
 - **a)** Fully align with the recommendation meaning that between 95-100 per cent of the recommendations are implemented.
 - **b) Highly align** with the recommendation- meaning that between 75-95 per cent of the recommendations are implemented.
 - **c) Broadly align** with the recommendation meaning that between 50-75 per cent of the recommendations are implemented.
 - **d) Partially align** with the recommendation meaning that between 25-50 per cent of the recommendations are implemented.
 - **e) Do Not align** with the recommendation meaning between 0-25 per cent of the recommendations are implemented.
 - f) The recommendation is **Not Applicable** meaning that for issues of materiality or relevance, the recommendation is not implemented. Materiality is subjective but a steer would be less than 0.05 per cent (and/or a monetary equivalent) of GDP.
- 21. The introduction of the notion of "per cent aligned" does introduce some subjectivity and flexibility into the exercise thus a range approach has been adopted.

This was done because it is difficult to define (and impossible to measure) what would constitute being 100 per cent aligned to a concept, accounting rule, method etc. It is proposed that country compilers use their knowledge of their processes and an assessment of economic activity in their country to make this determination for example, assume that the alignment framework includes the item - recording of illegal activity. Assume that the country includes estimates of illegal drug production and illegal drug-trafficking in its estimates but does not account for illegal tobacco smuggling. Assume that illegal tobacco smuggling is small relative to illegal drug trafficking and, at most, represents five per cent of the value of drug production and drug trafficking. In this case the country compiler would indicate that they fully align with the EASS since they are capturing approximately 95 per cent of illegal activity. While this requires some subjectivity on the part of the country compiler it is felt that this flexibility in determining full

versus partial versus no alignment was necessary and informative without putting too much burden on the compilers.

- 22. It is recommended that the dashboard be presented in digital format and be included as a part of the sources and methods documentation for a given EASS. The assessment can be done for the entirety of a macroeconomic accounts program or it can be completed for individual accounts. It is also recommended that the assessment be color coded such that:
 - ➤ Fully Aligned = Green
 - ➤ Highly Aligned = Light green
 - ➢ Broadly Aligned = Yellow
 - Partially Aligned = Light Yellow
 - ➤ Not Aligned = Red
 - ➤ Not Applicable = Black.

The following is an example of what an EASS alignment dashboard could look like (using the first few items from Annex II).

Category	Comments	F	Н	В	Р	N	NA
Production Boundary							
Covers							
Observed market		*					
output							
Non-observed market							
output.		*					
Non-market output			*				
Output for own final	Household						
use	output for own			*		*	
	final use is not						
	included.						
Imputed services					*		
Illegal output	Estimates of						
	illegal activity are						
	not included.						

The fully aligned, partially aligned and not aligned categories **are appropriate** when considering concepts, methods, and accounting rules but **not when considering classifications** used, tables or accounts. It is proposed that the timeliness (days released after the reference period)

and granularity (number of detailed classes) be used in "quantifying" the alignment of tables and accounts to a given standard as showing in Annex II.

SECTION IV: RECOMMENDED APPROACH - PRACTICAL ASPECTS

23. This recommendation has several practical considerations for compilers. First, it recommends that compilers assess the alignment of their macroeconomic program to the relevant EASS. Second, it recommends that national compilers communicate the results of this assessment broadly to both users and the international statistical community at large. Finally, since the macroeconomic accounts in most countries are continuously evolving, it implies that countries will need to periodically update this assessment to ensure it reflects the current state of their macroeconomic accounts program.

SECTION V: CHANGES REQUIRED TO THE 2008 SNA AND OTHER STATISTICAL DOMAINS

- 24. This recommendation does not propose changes to the concepts of the EASS. This recommendation defines a set of concepts, accounting rules, methods, classifications, and tables / accounts that constitute a given EASS. This "set" was determined by a deliberate assessment of those components of an EASS that have a significant impact on either the level or growth of the macroeconomic statistics.
- 25. The CMTT recommends that the above proposals are included as part of a chapter to the SNA, BPM, and GFS titled "Economic statistics Communication Practices and Recommendations." In addition to including the information from this GN, this proposed chapter should also include information from the CMTT GNs on Terminology (CM.2) and Taxonomy (CM.3). Countries should be encouraged to use the framework and make the results publicly available for all users.

Annex II. System of National Accounts Alignment Framework for Concepts, Methods, Rules, and Classification9

The underlying questions in this questionnaire format is intended to ensure some form of structure is used in assessing the quality of the accounts. The questionnaire lists a number of points to consider for each section. It is primarily targeted at availability, alignment and comparability in this context, the SNA, the BPM and the GFS.

The following table identifies the key assessment questions related to: (i) key concepts (ii) methods; (iii) accounting rules, and (iv) classifications against which alignment with the SNA can be assessed. The key concepts and definitions proposed are in line with the statistical best practices outlined in the SNA framework. The key concepts are broadly based on the IMF DQAF Questionnaire and the UNSD's 2008 SNA Compliance Questionnaire.

IV. SNA Alignment Framework - Accounts/Tables

Category	Sub-Category	Timeliness (e.g. T+30 days, T+3 months, etc.)	Granularity (Number of industries or number of transaction lines)	Limitations (e.g. missing entries)
Presentatio	n: Accounts and Tables			
	Annual value added by industry and GDP in current prices and in volume			
	terms			
	Annual GDP by expenditure in current prices and in volume terms			
	Annual GDP by income in current prices			
	Annual sequence of accounts for the total economy (until net lending /			
	borrowing)			
	Annual rest of the world accounts (until net lending / borrowing)			

Category	Sub-Category	Timeliness	Granularity	Limitations	
		(e.g. T+30 days,	(Number of	(e.g.	
		T+3 months, etc.)	industries or	missing	
			number of	entries)	
			transaction lines)		
Presentatio	n: Accounts and Tables				
	Annual non-financial corporation sector accounts (until net lending /				
	borrowing)				
	Annual financial corporations sector accounts (until net lending /				
	borrowing)				
	Annual general government sector accounts (until net lending / borrowing)				
	Annual household sector accounts (until net lending / borrowing)				
	Annual non-profit institutions serving households sector accounts (until				
	net lending / borrowing)				
	Quarterly value added by industry and GDP in current prices and in				
	volume terms				
	Quarterly sequence of accounts for the total economy (until net lending /				
	borrowing)				
	Quarterly rest of the world accounts (until net lending / borrowing)				
	Optional minimum requirement				
	Quarterly GDP by expenditures in current prices and in volume terms				
	Quarterly GDP by income in current prices				
	Recommended tables and accounts				
	Annual Supply and Use tables				
	Annual Input-Output tables				
	Annual integrated economic account table				
	Annual financial accounts for all institutional sectors				
	Annual cross-classification of output/value added by industries and				
	institutional sectors				
	Annual general government final consumption expenditure by purpose in				
	current prices and in volume terms				

Category	Sub-Category	Timeliness (e.g. T+30 days, T+3 months, etc.)	Granularity (Number of industries or number of transaction lines)	Limitations (e.g. missing entries)
Presentation	on: Accounts and Tables			
	Annual individual final consumption (and other) expenditure by purpose in current prices			
	Annual balance sheets, revaluation and other volume changes in asset accounts for all institutional sectors			
	Quarterly value added components by industry in current prices and in volume terms			
	Quarterly employment by industry			
	Quarterly non-financial corporation sector accounts (until net lending/borrowing)			
	Quarterly financial corporations sector accounts (until net lending/borrowing)			
	Quarterly general government sector accounts (until net lending/borrowing)			
	Quarterly household sector accounts (until net lending)			
	Quarterly non-profit institutions serving households sector accounts (until net lending)			
	Desirable tables and accounts			
	Annual social accounting matrices			
	Quarterly Supply and Use tables			
	Quarterly financial accounts for all sectors			
	Quarterly balance sheets, revaluation and other volume changes in asset accounts for all institutional sectors			
	Others			
	Capital stock			
	Labour accounts			

Category	Sub-Category Sub-Category	Timeliness (e.g. T+30 days, T+3 months, etc.)	Granularity (Number of industries or number of transaction lines)	Limitations (e.g. missing entries)
Presentatio	n: Accounts and Tables			
	Productivity tables (multi-factor, labour and capital)			
	Annual tourism accounts, environmental accounts and other socio- economic accounts			
	Annual general government final consumption expenditure by purpose in volume terms			
	Annual individual consumption expenditures by purpose in volume terms			
	Annual purpose classification of intermediate and final consumption across all institutional sectors			

Annex III. Balance of Payments and International Investment Position Manual (BPM) Alignment Framework for Concepts, Methods, Rules, Classification, Accounts and Tables

The following table identifies the key assessment questions related to: (i) key concepts (ii) methods; (iii) accounting rules, (iv) classifications, and (v) accounts and tables against which alignment with the BPM can be assessed. The key concepts and definitions proposed are in line with the statistical best practices outlined in the BPM framework. The key concepts are broadly based on the IMF DQAF Questionnaire.

II. BPM Alignment Framework – Concepts and Methods

Use the framework to indicate the degree of alignment with the BPM concepts, definitions, methods, accounting rules: (i) **fully aligned** with the recommendation means that between **95-100 per cent** of the recommendation is implemented, (ii) **Highly aligned** with the recommendation means between **75-95 per cent** of the recommendation is implemented, (iii) **broadly aligned** with the recommendations means between **50-75 per cent** of the recommendation is implemented, (iv) **partially aligned** with the recommendation means between **25-50 per cent** of the recommendation is implemented; and (vi) **the recommendation is not applicable** – meaning that for issues of materiality, the recommendation is not implemented.

Category	Sub-Category	Fully	Highly	Broadly	Partially	Not	N/A
		Aligned	aligned	aligned	Aligned	Aligned	
I. Concepts	and definitions						
A BPM cond	cept reflects the articulation of a macroeconomic idea,	activity, inter	raction, state,	or notion. Co.	ncepts detern	nine what ge	ts
	an example is the concept of residency in the BPM.	•	, ,		,	9	
	i) Units of the economy include						
	Domestic territory						
	Incorporated or unincorporated affiliates of						
	non-resident companies						

Category	Sub-Category	Fully Aligned	Highly aligned	Broadly aligned	Partially Aligned	Not Aligned	N/A
	Territorial enclaves in the rest of the world						
	Free zones / bonded warehouses /						
	factories operated by offshore enterprises						
	under customs control						
	Workers who work part of the year in						
	another country						
	- In particular						
	Residence of Special Purpose Entities						
	(SPEs) is attributed to the economy in						
	which they are located						
	International organizations and						
	supranational authorities are not						
	considered residents of any national						
	economy						
	All units of general government (e.g.						
	embassies, military bases) are considered						
	to be resident in their own economy						
	Subject to specific circumstances, an						
	individual may cease being a resident of						
	his country when he or she works						
	continuously for one year or more in a						
	foreign country						
	ii) Balance of payments accounts cover						
	Both foreign currency and domestic						
	currency transactions with non-residents						
	Both exchanges and unrequited transfers						
	(transactions without a quid pro quo)						
	Goods for processing						
	Repairs on goods						
	Non-monetary gold						
	Shuttle trade						
	Smuggling						
	Purchase of computer software						
	Mineral exploration						
	E-commerce transactions						

Category	Sub-Category	Fully Aligned	Highly aligned	Broadly aligned	Partially Aligned	Not Aligned	N/A
	Leases and other transferable contracts						
	Reinvested earnings						
	Inter-company lending						
	Portfolio investment of private sector						
	Trade credit						
	Short-term debt transactions						
	Debt arrears						
	Non-cash transactions						
	iii) International investment position accounts cover						
	All financial claims between resident						
	institutional units and non-residents						
	iv) Structure, in terms of concepts and definitions						
	Current, capital, and financial accounts of						
	the BOP statement are defined according						
	to BPM6						
	Net lending / net borrowing recorded as the						
	current and capital account balance is in						
	principle equal to net lending / net						
	borrowing recorded as the financial						
	account balance						
	Double-entry system is applied in						
	constructing the BOP statement, and the						
	net residual is embedded in the errors and						
	omissions item; net errors and omissions						
	are derived as net lending / net borrowing						
	from the financial account minus the same						
	item derived from the current and capital						
	account						
	A clear distinction is made between the						
	income component and the goods and						
	services components.						
	The BOP financial account provides for a						
	separate recording of transactions in						
	assets and transactions in liabilities.						
	Foreign direct investment is presented on a						

Category	Sub-Category	Fully Aligned	Highly aligned	Broadly aligned	Partially Aligned	Not Aligned	N/A
	gross assets and liabilities basis.						
	Data on foreign direct investment on the						
	directional basis (i.e. inward and outward						
	direct investment) are also available						
	Transactions in goods and services by						
	government entities abroad are classified						
	under the government services not-						
	included-elsewhere component						
	Manufacturing on physical inputs owned by						
	nonresidents is recorded as a service						
	Merchanting of goods is classified under						
	goods trade, with both gross and net						
	values shown; the net amounts are						
	included in the goods exports aggregates						
	Outright purchases and sales of the results						
	of R&D (including patents and copyrights)						
	are recorded under R&D services						
	Charges for the use of the outcomes of						
	R&D are classified as a service under						
	charges for the use of intellectual property						
	n.i.e.						
	Financial intermediation services indirectly						
	measured (FISIM) are distinguished from						
	investment income and classified under						
	financial services						
	All changes related to migrants' transfers						
	are excluded from the BOP; corrections in						
	the form of other changes are made in the						
	IIP for the relevant positions in assets and						
	liabilities.						
	Long-term construction projects are						
	classified under foreign direct investment						
	License fees for fishing and hunting are						
	included in the capital account						
	Borrowing and lending - including debt						

Category	Sub-Category	Fully Aligned	Highly aligned	Broadly aligned	Partially Aligned	Not Aligned	N/A
	securities and supplier's credits - between direct investors and direct investment enterprises are classified under foreign						
	direct investment, except where transactions / positions are between a selected category of affiliated financial intermediaries						
	Loan transactions and positions of the banking sector are classified separately from currency and deposits transactions / positions of this sector; however, interbank loan positions are classified under deposits.						
	The short-term and long-term attribution of transactions and positions in the other investment component is made according to the original maturity of the financial instrument						
	v) Functional categories						
	Foreign direct investment transactions are defined as equity ownership representing 10 per cent or more of the voting power						
	Reserve assets are defined considering the concept of monetary authorities' effective control and availability for use						
	vi) Sectorization						
	Government guaranteed external debt transactions are attributed to the institutional sector of the borrower						
	Government-controlled enterprises that are public corporations are excluded from general government and are included as public enterprises in the appropriate nonfinancial or financial corporations sector						

Category	Sub-Category	Fully Aligned	Highly aligned	Broadly aligned	Partially Aligned	Not Aligned	N/A
I. Account	ing Rules	J	J	J		J	
	ccounting rules reflect the guidelines that compilers sh	ould follow v	vhen recordin	g transactions	, positions, ai	nd other eco	nomic
	determine how activities get recorded, for example ac				•		
-	Valuation						
	Market prices are used to value transactions and positions; for some positions, proxies are used						
	Monetary gold is valued at market prices						
	Financial instruments traded on a regular basis are valued by directly using the price quotations from markets						
	Total imports and exports are valued on an f.o.b. basis						
	Appropriate substitute measures are developed when no actual market prices are available, for example for:						
	Barter trade, transactions between affiliated enterprises, gifts or grants						
	For financial instruments that are not or infrequently trade in financial markets a fair value is estimated that approximates market value						
	Loans, deposits, and other accounts receivable/payable are recorded at nominal value						
	When transactions estimates are derived from stock data, the value of the transaction excludes valuation and other changes						
	Transactions in foreign currency are converted using the mid-point exchange rate prevailing in the market when they take place						
	When transactions estimates are derived from stock data, an attempt is made to						

Category	Sub-Category	Fully Aligned	Highly aligned	Broadly aligned	Partially Aligned	Not Aligned	N/A
	value the stock data in their original						
	currencies, and then convert the change in						
	original currency to domestic currency/unit						
	of account at the average exchange rate						
	for the applicable period						
	Proper adjustments are made if a system						
	of multiple official exchange rates exists						
	Time of Recording						
	Transactions are recorded on an accrual						
	basis						
	Transactions are recorded according to the						
	change in ownership principle						
	Grossing / Netting, Consolidation						
	Current and capital account transactions						
	are recorded on a gross basis while						
	financial account transactions are recorded						
	on a net basis, separately for the individual						
	asset and liability components						
III. Method EASSs me	s thods are closely associated with accounting rules. On	e way to inte	erpret a metho	d is to view it a	as the way a	macroecono	mic
accountant	implements an accounting rule or measures a concept	t. For examp	le, one compil	er may decide	e to use a sei	ries of price i	ndices to
derive an e	stimate of the market value for a stock of assets while	another com	piler may deci	ide to obtain d	bserved valu	es recorded	on the
balance sh	eets of enterprises. Both are following the same valuati	ion rule, but	both have use	d different me	ethods to app	ly the rule.	
	Investment income is obtained directly (e.g.						
	reported on a survey) or is estimated by multiplying						
	outstanding stock of financial assets by a						
	corresponding representative yield						
	Direct investment relationships identified by						
	applying the Foreign Direct Investment						
	Relationship (FDIR) or similar methods						

III. BPM Alignment Framework - Classification

Annex IV. Government Finance Statistics (GFS) Alignment Framework – Concepts, Accounting Rules, and Methods

The following tables identifies the key assessment questions related to: (i) key concepts (ii) methods; (iii) accounting rules, and (iv) classifications against which alignment with the Government Finance Statistics Manual 2014 (GFSM 2014) can be assessed. The key concepts and definitions proposed are in line with the statistical best practices outlined in the GFSM 2014. The key concepts are broadly based on the IMF's Data Quality Assessment Framework (DQAF) Questionnaire. * GFS (Government Finance Statistics) is used here and later to refer to GFS as defined in the GFSM 2014 (which provides a framework for the preparation of public sector financial statistics, including debt statistics)

I. GFS* Alignment Framework – Metadata

Do you publish annual GFS?	Y/N	Insert link:

II. GFS Alignment Framework – Coverage (Institutional and Stock/Flow)

	BCG	EBCG	CG	SSF	SG	LG	GG	NFPC	FPC	PS
What is the accounting bases of the statistics (CA, AC, PA)?										
Are the data consolidated (Y/N)?										
What is the highest frequency of publication (A, Q, M)?										
Revenue										
Expenditure – economic classification										
Expenditure – functional classification (COFOG)										
Transactions in financial assets and liabilities										
Nonfinancial assets (stocks)										
Financial assets (stocks)										
Liabilities - including debt (stocks)										
Other economic flows										
Contingent liabilities (stocks)										

BCG = Budgetary Central Government, EBCG = Extrabudgetary Central Government, CG = Central Government, SSF = Social Security Funds, LG = Local Government, GG = General Government, NFPC = Nonfinancial Public Corporations, FPC = Financial Public Corporation, PS = Public Sector, CA = Cash, AC = Accrual, PA = Partial Accrual*, A = Annual, Q = Quarterly, M = Monthly.

(* Partial Accrual may indicate that either some items/interactions are recorded on a cash basis and others on an accrual basis; or that all items/interactions are neither recorded on a pure cash or a pure accrual basis.)

"NP" to be used if institutional sector not applicable to country, "NA" if institutional sector is applicable but data are not compiled/published.

III. GFS Alignment Framework – Concepts, Accounting Rules, and Methods

Use the framework to indicate the degree of alignment with the GFS concepts, definitions, methods, accounting rules: (i) **fully aligned** with the recommendation means that between **95-100 per cent** of the recommendation is implemented, (ii) **highly aligned** with the recommendation means between **75-95 per cent** of the recommendation is implemented, (iii) **broadly aligned** with the recommendations means between **50-75 per cent** of the recommendation is implemented, (iv) **partially aligned** with the recommendation means between **25-50 per cent** of the recommendation is implemented; and (vi) the recommendation is not applicable – meaning that for issues of materiality the recommendation is not implemented.

Category	Sub-Category	Fully Aligned	Highly aligned	Broadly Aligned	Partially Aligned	Not Aligned	N/A
A. Concep	ts and definitions						
	pts identify and define what units, activities, interactions, and notions get recognize	d and meas	ured in GF	S. Examples	are the cond	ept of the ge	eneral
governmen	t sector, and the concept of debt liabilities.						
	i) Units of general government include:						
	All central government budgetary units						
	Territorial enclaves in the rest of the world						
	All state government units						
	All local government units						
	All social security funds						
	All non-market nonprofit institutions (NPIs) controlled by government units						
	All non-financial corporations controlled by government which do not meet the criteria to be market producers						
	All financial corporations controlled by government which do not meet the criteria to be market producers						
	ii) Public corporations include:						
	Central Bank, and central supervisory authorities which are financial auxiliaries						
	All non-financial corporations controlled by government which are institutional units and meet the criteria to be market producers						
	All financial corporations controlled by government which are						
	institutional units and meet the criteria to be market producers						
	iii) Revenue includes only those transactions which increase net worth						
	- In particular, the following concepts are followed:						
	In-kind revenues are included						

Transactions in debt forgiveness (to government) are included				
All social contributions are included without consolidation (as these are				
treated as transactions between households and government)				
Only that portion of dividends which do not meet the "super-dividend				
test" (see GFSM 2014 paras. 5.115-6) are included				
Only taxes and social contributions where there is a realistic expectation				
of collection are included				
Principal payments related to (policy) lending are excluded				
Privatisation proceeds are excluded (and included instead as disposals				
of equity)				
Non-financial asset sale proceeds are excluded (and included as				
transactions in nonfinancial assets)				
iv) Expense includes only those transactions which decrease net worth				
- In particular, the following concepts are followed:				
In-kind expenses are included				
Consumption of fixed capital is included				
Compensation of employees includes all amounts payable to employees				
in the form of cash, goods, services, interest foregone (etc.) in return for				
work performed				
Compensation of employees includes imputed employers' social				
contributions related to pension, and other social benefit, entitlements				
Subsidies only include transfers made to enterprises based on their				
production levels or quantities				
Capital injections are included where there is no effective financial claim				
or expectation of realistic return				
Transactions in debt forgiveness (by government) are included				
All capital transfers (external and domestic) are included				
Acquisitions of equity and (policy) lending are excluded				
v) Transactions, flows, and stocks in non-financial assets are reported				
- In particular, the following items are included:				
Buildings (such as government offices, army barracks, public				
monuments, schools, and hospitals)				
Infrastructure (such as roads, bridges, railways, tunnels, sewers,				
harbors, dams, power lines)				
Transport equipment (such as cars, trains, planes)	<u> </u>			
ICT equipment (such as computer hardware, telecommunications				
equipment)	<u> </u>			

	Cultivated biological resources (such as trees, crops)						
	Research and development products						
	Mineral exploration and evaluation (whether successful or not)						
	Weapons systems (such as warships, submarines, tanks, missile						
	carriers and launchers, etc.)						
	Inventories						
	Natural resources (such as land, mineral and energy resources, radio						
	spectrum)						
	Contracts, leases and licenses (such as transferable permits to use						
	natural resources or to undertake a specific activity)						
	vi) Transactions, flows, and stocks in financial assets and liabilities are reported						
	- In particular, the following items are included:						
	Monetary gold (assets only)						
	Special Drawing Rights						
	Currency and deposits						
	Debt securities						
	Loans						
	Equity						
	Pension entitlements and/or Claims of pension funds on pension						
	managers, for employment-related pensions (as applicable)						
	Provisions for calls under standardized guarantee schemes						
	Financial derivatives						
	Other accounts receivable / payable						
B. Account	ting Rules						
The GFS ad	ccounting rules reflect the guidelines that compilers should follow when recording st	ocks, transa	actions and	other econoi	mic flows. Th	ey determir	ne how
activities ge	et recorded, for example accrual basis of recording principle.						
	Valuation						
	All stocks, transactions, and other economic flows are recorded using a						
	single unit of account (usually the domestic currency)						
	Stocks of financial assets and liabilities are valued at market prices						
	Debt statistics are produced at nominal value						
	Stocks of non-financial assets are valued at market prices						
	Transactions in non-financial produced fixed assets are net of						
	consumption of fixed capital						
	Transactions in non-financial produced assets include costs of						
	ownership transfer (such as fees, taxes, transport and installation						
	charges)						

are included as non-financial produced (fixed) assets Transactions in foreign currency are converted using the mid-point exchange rate prevailing in the market when they take place Stocks in foreign currency are converted using the exchange rate prevailing in the market at the time of measurement Consumption of fixed capital, where reported, is valued at current replacement cost. Time of Recording Transactions and flows are recorded on an accrual basis - In particular: Interest is recorded as accruing continuously, over the period that the financial asset to which it relates exists Rent is recorded as accruing continuously, over the period of the resource lease Dividends are recorded when the corporation declares the dividend payable Fines and penalties are recorded when the recipient has an unconditional claim to the funds Transactions in non-financial assets are recorded when economic ownership of the assets changes Where there is a material difference between when goods are purchased and used, they are first recognized as inventories before being expensed Consolidation Internal transactions within an institutional unit are consolidated and not recorded in the GFS for that subsector Transactions between units within a subsector are consolidated and not recorded in the GFS for that subsector Transactions between government (or public sector) sub-sectors are consolidated and not recorded in the GFS for the general government sector (or public sector)			I	1	1	1

C. Methods							
EASSs method	ls are closely associated with concepts accounting rules. One way to interpret a	method is to	o view it as	the way a n	nacroeconom	ic accounta	nt
implements an	accounting rule or measures a concept. For example, one compiler may decide	to report ta	xes using a	a time adjust	ed cash meth	od and and	ther
	ssessment/declaration approach. Both are following the same accrual time of re-						
apply the rule.	,,	Ü	ŭ				
	exes are recorded using either the time-adjusted cash method or the						
	sessment/declaration approach (see GFSM 2014 para. 3.80)						
	osts incurred in own-account capital formation are treated solely as						
	ansactions in nonfinancial assets and are excluded from expense						
	nployment-related pension liabilities are calculated using an actuarial						
	proach (and related property expenses, and employers' social contributions						
	thin compensation of employees, imputed)						
	vidend payments are assessed using the "super-dividend test" and split						
	etween revenue/expense and transactions in financial assets/liabilities, as						
	guired						
	apital injections are assessed using the "capital injection decision tree" and						
	lit between expense/revenue and transactions in financial assets/liabilities, as						
	quired						
	ne nature of leases is carefully examined to distinguish operating leases from						
	ancial leases						
Th	ne risk and reward assessment of Public-Private Partnerships (PPPs) is						
	inducted to determine whether or not the assets should be on the public sector

Annex V: Outcome of July 2021 AEG Discussion

AT THE JULY 2021 MEETING, THE AEG MEMBERS WERE ASKED TO REFLECT ON THE FOLLOWING QUESTIONS:

- 1. Do you agree with the components of the SNA, BPM and GFS alignment frameworks as presented in the Annex?
- 2. Do you agree with the 'dashboard' methodology used for the assessment framework?
- 3. Do you agree with the definition of the categories fully aligned, highly aligned, broadly aligned, and partially aligned used to demarcate the degree of alignment?
- 4. Do you have proposals on how to communicate a country's overall level of alignment to users?

SUMMARY OF DISCUSSIONS

- The members welcomed the progress of the work of the CMTT. However, they
 encouraged the CMTT to ensure that the alignment frameworks align with those already
 developed such as the UN National Quality Assurance Framework, IMF's Data Quality
 Assurance Framework (DQAF) and the Generic Statistical Business Process Model (GSBPM).
- Members emphasized the need to provide countries with flexibility to note in the
 frameworks when they deviate from international recommendations due their domestic
 circumstances and users' needs. As such, the framework now reflects a category for 'not
 applicable' for countries to indicate when a particular element of the framework is not
 applicable either because of user needs or relevance of the concept etc to the reporting
 economy.
- On the dashboard relative to scoring approach, the members recognized the need to
 have an overall assessment which would define (and communicate explicitly to users)
 the degree to which a country has adopted the statistical recommendations in its
 entirety. However, members were generally not in favour of using a 'score' to measure
 alignment to the international standards (or to indicate quality). Some members also noted
 concerns about the subjectivity of the assessment and requested more information on how
 this tool differs from or compliments metadata available from other national and international
 sources.
- Finally, the CMTT was asked to further refine the guidance note with the target for the next version to be ready by the end of September 2021. Since the meetings, the guidance note has been updated to reflect the comments of the members.

Annex V: Outcomes of October and November 2021 BOPCOM and AEG Meetings

THE MEMBERS OF THE COMMITTEES WERE ASKED TO REFLECT ON THE FOLLOWING QUESTIONS:

Questions to the Committee

- 1. Do you agree to move this note forward to global consultation?
- 2. Do you agree with the components of the SNA, BPM and GFS alignment frameworks as presented in the Annex?
- 3. Do you agree with the 'dashboard' methodology used for the assessment framework?
 - 4. Do you agree with the definition of the categories fully aligned, highly aligned, broadly aligned, and partially aligned used to demarcate the degree of alignment?

Do you have proposals on how to communicate a country's overall level of alignment to users?

SUMMARY OF DISCUSSIONS

Committee members fully supported moving the GN for global consultation. Further, Committee members strongly supported the alignment frameworks and the dashboard approach proposed in the GN. While national statistical agencies have their own approaches to convey information to the public, They agreed that the dashboard format is one of the most appropriate communication mechanisms. Nevertheless, members made the following suggestions to bring further improvements to the GN including on the approaches for communicating a country's overall level of alignment to users:

- conduct pilot surveys on the proposed alignment frameworks among countries that are interested to volunteer:
- include guidelines on appropriately balancing between providing information on alignment with international standards and providing other metadata (specifically focusing on the statistical offices with limited resources);
- provide further guidance on the interpretation of the dashboard (e.g., after paragraph 23, one category (output for final use) is shown as both broadly aligned with international standards and as not aligned);
- granularity of the components could be finalized after updated *BPM6* recommendations (and other Manuals) are available, as not every economy may need them all;
- further guidance on judging the dashboard elements may be provided to avoid subjectivity in the assessment;

- link the self-assessments to the equivalent standard page on the IMF's Enhanced General Data Dissemination System (e-GDDS), Special Data Dissemination Standard (SDDS), and/or SDDS+; and
- promote a central webpage could be good practice—on the lines of the IMF Dissemination Standards Bulletin Board (DSBB) "National Summary Data Page".

In addition, some members supported that full alignment (as per the dashboard) may not always be associated with better quality as countries with partial alignment but better source data than others with full alignment would be shown as inferior.
