**UNITED NATIONS  
NEW YORK, 2020**

The Department of Economic and Social Affairs of the United Nations is a vital interface between global policies in the economic, social and environmental spheres and national action. The Department works in three main interlinked areas: (i) it compiles, generates and analyses a wide range of economic, social and environmental data and information on which United Nations Member States draw to review common problems and to take stock of policy options; (ii) it facilitates the negotiations of Member States in many intergovernmental bodies on joint courses of action to address ongoing or emerging global challenges; and (iii) it advises interested Governments on the ways and means of translating policy frameworks developed in United Nations conferences and summits into programmes at the country level and, through technical assistance, helps build national capacities.

#### NOTE

Symbols of United Nations documents are composed of capital letters combined with figures. Mention of such a symbol indicates a reference to a United Nations document. The first 14 editions of the National Accounts Yearbook were issued without series symbols.

The designations employed and the presentation of the material in the present publication do not imply the expression of any opinion whatsoever on the part of the United Nations concerning the legal status of any country or of its authorities, or the delimitations of its frontiers. The term “country” as used in this report also refers, as appropriate, to territories or areas. The designations of country groups are intended solely for statistical or analytical convenience and do not necessarily express a judgement about the stage reached by a particular country, territory or area in the development process. Mention of the names of firms and commercial products does not imply endorsement by the United Nations. The symbols of United Nations documents are composed of capital letters and numbers.

# INTRODUCTION

1. This is the sixty-first issue of *National Accounts Statistics: Main Aggregates and Detailed Tables*<sup>1,2</sup> showing detailed national accounts estimates for 209 countries and areas for the reporting years 2008 to 2019. Like the previous issues, it has been prepared by the Statistics Division of the Department for Economic and Social Affairs of the United Nations Secretariat with the generous co-operation of national statistical offices. It is issued in accordance with the recommendation of the Statistical Commission at its first session<sup>3</sup> that the Statistics Division of the United Nations should publish regularly the most recent available data on national accounts for as many countries and areas as possible.

## THE NATIONAL ACCOUNTS QUESTIONNAIRE

2. This publication is the twentieth issue based on the United Nations National Accounts Questionnaire (NAQ) introduced in October 1999, which in turn is based on *the System of National Accounts 1993 (1993 SNA)*<sup>4</sup>.

3. The 1993 SNA was unanimously recommended to the United Nations Economic and Social Council by its Statistical Commission at its 24th session in March 1993. Similar to the recommendation made in 1968 for its predecessor, *A System of National Accounts* (1968 SNA)<sup>5</sup>, the Council in its resolution 1993/5 of 12 July 1993 recommends that Member States use the 1993 SNA in the international reporting of comparable national accounting data. However, it should be highlighted that the Council went a few steps further in 1993 and also recommends that Member States consider using the 1993 SNA: (a) as the standard for the compilation of their national accounts statistics, (b) to promote the integration of economic and related statistics, and (c) as an analytical tool. In 2003 the United Nations Statistical Commission (UNSC) called for an update of the 1993 SNA. The updated SNA, called *The System of National Accounts 2008*<sup>6</sup>, or in short the 2008 SNA, was finalized during 2009. Beginning in October 2014, Member States of the European Union adopted the European System of Accounts 2010 (ESA 2010)<sup>7</sup>, which is a counterpart of the 2008 SNA. In addition to the European Union Member States, an increasing number of other countries have also adopted the 2008 SNA recommendations.

4. Taking into account all the above recommendations the United Nations Statistics Division (UNSD), in cooperation with the United Nations Regional Commissions, has designed the United Nations National Accounts Questionnaire (NAQ) based with the following objectives in mind:

(a) The tables included are those that provide a data set most relevant for global and regional analysis carried out by the United Nations Department of Economic and Social Affairs (DESA) and other international and regional organizations. It should be noted that the scope of the 1993 SNA aims at a much more detailed analysis at the national level than what the questionnaire tables represent. The UNSC has agreed that the scope and pace of the implementation of the 1993 SNA must be decided by each country according to its analytical and policy needs, the resources available for implementation, and the current state of basic data.

(b) The tables reflect an equally balanced emphasis between production analysis based on supply and use information by industries on the one hand, and production, income and financial analysis based on integrated accounts for institutional sectors on the other. Thus, the behaviour of economic agents and distributional effects which are very important in explaining differences in economic structures and developments of countries can be identified.

## SCOPE OF THE QUESTIONNAIRE

5. The data tables of the questionnaire are divided into five parts. Part I (Tables 1.1 to 1.3) requests summary information on gross domestic product by expenditure in current and constant prices and on the relations among product, income, saving and net lending aggregates.

6. Part II (Tables 2.1 to 2.6) of the questionnaire requests information on kind of activity breakdowns. The data series for this group of tables are requested to be reported according to the International Standard Industrial Classification of all Economic Activities (ISIC<sup>8,9</sup>). Tables 2.1 to 2.3 follow the ISIC Rev. 3 and are equivalent to Tables 2.4 to 2.6, which follow the ISIC Rev. 4, and countries can complete the appropriate tables according to the ISIC version they use for compiling their national accounts. Data can be provided either as a combination of tabulation categories (A+B, G+H, J+K and M+N+O, for the ISIC Rev. 3; or A, B+C+D+E, C, F, G+H+I, J, K, L, M+N, O+P+Q and R+S+T, for the ISIC Rev. 4) or as single tabulation categories (Sections A to P for ISIC Rev. 3; and A to T, for ISIC Rev. 4) (one-digit level of ISIC). In the case of ISIC Section A, information at the two-digit level is requested for divisions 01, 02 (and 03, for the ISIC Rev. 4); whereas for ISIC Rev. 3 Section I information is requested for division 64 and the sum of the divisions 60 to 63. Where appropriate both current and constant prices are specified.

7. Part III (Tables 3.1 and 3.2) of the questionnaire requests information on functional breakdowns in current prices. The data series are requested to be reported according

to the Classifications of Expenditure According to Purpose<sup>10</sup>. For the general government final consumption expenditure (including both individual and collective consumption expenditure), data are requested for the 10 divisions of the Classification of the Functions of Government (COFOG). For the individual consumption expenditure by households, data are requested for the first 12 divisions of the Classification of Individual Consumption According to Purpose (COICOP), which is based on the Central Product Classification (CPC)<sup>11,12</sup>. For the individual consumption expenditure by non-profit institutions serving households, data are requested for groups 13.1 through 13.6 of division 13 of COICOP. For the individual consumption expenditure by general government, data are requested for groups 14.1 through 14.5 of division 14 of COICOP.

8. Part IV (Tables 4.1 to 4.9) of the questionnaire requests information on the integrated economic accounts. The data requested in this part includes the sequence of accounts for the total economy, rest of the world and the five institutional sectors of the system, i.e. the non-financial corporations, financial corporations, general government, households, and non-profit institutions serving households. For all of the sectors as well as for the total economy data for the uses and resources as well as balancing items are requested for each of the accounts from the production account through the financial account as specified in Annex V, Part II of the 1993 SNA.

9. Part V (Tables 5.1 and 5.2) of the questionnaire requests information on the cross-classification of gross value added by industries and institutional sectors. Data are requested to be reported for gross value added of the total economy and the five institutional sectors of the system included in Part IV cross-classified by categories of ISIC Rev. 3 (Table 5.1) or ISIC Rev. 4 (Table 5.2) as indicated in Part II above.

10. Countries are requested to update the data tables and complete them as comprehensively as possible. The tables are listed below:

#### Part I: Main aggregates

Table 1.1 Gross domestic product by expenditures at current prices

Table 1.2 Gross domestic product by expenditures at constant prices

Table 1.3 Relations among product, income, saving and net lending aggregates at current prices

#### Part II: Domestic production by industries

Table 2.1 Value added by industries at current prices (ISIC Rev. 3)

Table 2.2 Value added by industries at constant prices (ISIC Rev. 3)

Table 2.3 Output, gross value added and fixed assets by industries at current prices (ISIC Rev. 3)

Table 2.4 Value added by industries at current prices (ISIC Rev. 4)

Table 2.5 Value added by industries at constant prices (ISIC Rev. 4)

Table 2.6 Output, gross value added and fixed assets by industries at current prices (ISIC Rev. 4)

#### Part III: Classifications of expenditure according to purpose

Table 3.1 General government final consumption expenditure by function at current prices

Table 3.2 Individual consumption expenditures at current prices

#### Part IV: Integrated economic accounts

Table 4.1 Total economy (S.1)

Table 4.2 Rest of the world (S.2)

Table 4.3 Non-financial corporations (S.11)

Table 4.4 Financial corporations (S.12)

Table 4.5 General government (S.13)

Table 4.6 Households (S.14)

Table 4.7 Non-profit institutions serving households (S.15)

Table 4.8 Combined Sectors: Non-Financial and Financial Corporations (S.11 + S.12)

Table 4.9 Combined Sectors: Households and NPISH (S.14 + S.15)

#### Part V: Cross classification of gross value added by industries and institutional sectors

Table 5.1 Cross classification of gross value added by industries and institutional sectors (ISIC Rev. 3)

Table 5.2 Cross classification of gross value added by industries and institutional sectors (ISIC Rev. 4)

11. It should be noted that the NAQ does not cover the full scope of the accounts and tables that comprise the 1993 SNA since it mainly serves to collect data needed for global and regional analysis rather than national analysis. Also, it is in certain respects less comprehensive than the previous questionnaire based on the 1968 SNA since, for example, it does not include tables for the other changes in assets accounts and the balance sheets of the total economy and institutional sectors; the data requested on stocks of fixed assets is very limited; the tables requested broken down by kind of economic activity are less detailed, showing mainly the one-digit level of ISIC instead of the two-digit level of ISIC.

## COLLECTION OF DATA

12. To collect the large volume of national accounts data, the Statistics Division annually sends a pre-filled NAQ to countries or areas. The recipients are requested to update the questionnaire with the latest available national accounts estimates and to indicate where the scope and coverage of the country estimates differ for conceptual or statistical reasons from the definitions and classifications recommended by the 1993 SNA. Data obtained from these replies are supplemented by information gathered from correspondence with the national statistical offices and from national source publications. Countries are also requested to provide a brief overview of the sources and methods to compile their national accounts.

13. In order to lighten the reporting burden of countries to different international and regional organizations the UNSD receives data from the Organisation for Economic Co-operation and Development (OECD), the United Nations Economic Commission for Europe (ECE) and the Caribbean Community (CARICOM) on behalf of their constituents. The UNSD, Eurostat and the OECD have agreed on an integrated set of national accounts questionnaires. The three organizations exchange data to a maximum extent possible. Thanks to the consistency of the 1993 SNA and the European System of Accounts (ESA 1995), and also the consistency between the 2008 SNA and the ESA 2010, all OECD countries submit data either to EUROSTAT or OECD but need not provide duplicate submissions. Member States of OECD which are not members of the European Community complete a OECD-specific questionnaire. The ECE provides data for its non-European Member States. CARICOM uses the NAQ to collect data from its Member States and provides it to UNSD. As a result, the United Nations questionnaire based on the 1993 SNA is sent to less than 160 countries, areas, and territories out of the 235 (of which only 209 have provided sufficient data to be published) included in the UNSD National Accounts database.

14. In order to create a comprehensive database based on the 1993 SNA, UNSD made a one-time conversion of data from the 1968 SNA format to the 1993 SNA format for all countries included in the UNSD national accounts database.

## CONCEPTUAL REFERENCES AND PRESENTATION OF DATA

15. The form and concepts of the statistical tables in the present publication generally conform to the recommendations by the 1993 SNA. A summary of the conceptual framework and definitions of transactions is provided in chapter I of the present publication.

16. Although the NAQ collects data in the 1993 SNA format, countries may still use the 1968 SNA (or in some rare cases the 1953 SNA) guidelines to compile their national accounts. The UNSD evaluates the status of the conceptual adherence to the 1993 SNA from time to time.

17. The Series number at the top of each table indicates which SNA version is used by the given country to compile their national accounts. Series numbers below 100 relate to data according to the 1968 SNA, series numbers 100 and above relate to data according to the 1993 SNA and series numbers 1000 and above relate to data according to the 2008 SNA. Whenever data based on a previous version of the SNA are not replaced backwards for all years by a series of data based on a newer version of the SNA, the newer data are presented in a new row with one overlapping year in order to allow users to link the two series. When the scope and coverage of the estimates differ for conceptual or statistical reasons from the definitions and classifications recommended by the 1993 SNA, a footnote is attached to the relevant tables.

18. In the tables with constant price data (Tables 1.2, 2.2 and 2.5), the data with a new fixed base year are presented as a new sub-series in a separate row with one overlapping year. The new base year (or reference year) is indicated in the column of the year in which the new sub-series starts. An exception to this rule is chain linked volume series where figures are given at prices of the previous year. Such data are presented as a single series and the respective base year is indicated for every year. For countries, which use chain linked volume series but link the data to a uniform reference year, a respective qualification is made in the country note. It has to be noted that constant price data, which are linked or chained in such a way are not additive, i.e. the total is not equivalent to the sum of its components.

19. In the present publication, the data for each country or area are presented in separate chapters, in alphabetical order, under uniform table headings and classifications of the 1993 SNA. Unless otherwise stated, the data in the country tables relate to the calendar year against which they are shown. The Series note at the top of each table indicates the type of fiscal year used for any given series.

## COMPARABILITY OF THE NATIONAL ESTIMATES

20. Every effort has been made to present the estimates of the various countries or areas in a form designed to facilitate international comparability. To this end, important differences in concept, scope, coverage and classification have been described in the notes, which precede and accompany the country tables. Such differences should be taken into account if misleading comparison among countries or areas are to be avoided. It should also be noted

that the country notes not only refer to the latest data covered in this publication but to the country in general.

## REVISIONS

21. The figures shown are the most recent estimates and revisions available at the time of compilation. In general, figures for the most recent year are to be regarded as provisional.

## NOMENCLATURE

22. The information for the countries and areas shown in this publication reflect what is available to the UNSD as of August 2020. Updated national accounts data are usually provided by countries to the UNSD between January and July. Data for the year 2019 are currently available for 109 countries and areas.

23. The data for the countries listed below are represented as follows:

China is published in this yearbook in three sections: China; China, Hong Kong Special Administrative Region; and China, Macao Special Administrative Region. The data for China exclude the special administrative regions of Hong Kong and Macao.

Netherlands Antilles – The Netherlands Antilles as a country was dissolved on 10 October 2010. As of this date, Curaçao and Sint Maarten became countries within the Kingdom of the Netherlands, and the islands Bonaire, Saint Eustatius and Saba became special municipalities of the Netherlands. Data up to 2009 that appear under Netherlands Antilles refer to the former country. Data for Curaçao and Sint Maarten appear separately under the respective country names and data for Bonaire, Saint Eustatius and Saba appear under the collective name and represent data for these special municipalities of the Netherlands.

Sudan and South Sudan – South Sudan seceded from Sudan in July 2011. Data for the former Sudan appear under “Sudan (up to 2011)”. Data for Sudan and South Sudan in the new

configuration (after July 2011) appear under the respective country names.

Tanzania – The data for Tanzania are published in two parts in this yearbook: mainland Tanzania and Zanzibar. Note that the data listed under Tanzania does not include Zanzibar.

## SYMBOLS AND DATA DISPLAY

24. The following symbols have been employed:

Data not available..... [...]

Magnitude nil or less than five percent of the unit employed..... [0.0]

Decimal figures are always preceded by a point [.]

25. Each series version is presented in a separate row and identified by a series number in the column of the year in which it starts. A new series version is introduced if the data displayed differs from preceding data in terms of methodology, fiscal-year type or currency. A Series note at the top of each table informs about the SNA version applied, currency denomination, and fiscal-year type used. The scale used to present the data is displayed at the top right of each table.

26. Decimals in tables do not necessarily add to totals shown because of rounding.

## GENERAL DISCLAIMER

27. The designations employed and the presentation of material in this publication do not imply the expression of any opinion whatsoever on the part of the Secretariat of the United Nations concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers and boundaries.

28. Where the designation “country or area” appears in the headings of tables, it covers countries, territories, cities or areas. In prior issues of this publication where the designation “country” appears in the headings of tables, it covers countries, territories, cities or areas

# I. SYSTEM OF NATIONAL ACCOUNTS

1. The origins of the System of National Accounts (SNA) trace back to the 1947 Report of the Sub-Committee on National Income Statistics of the League of Nations Committee of Statistical Experts under the leadership of Richard Stone<sup>1</sup>. At its first session in 1947, the United Nations Statistical Commission emphasized the need for international statistical standards for the compilation and updating of comparable statistics in support of a large array of policy needs. Specifically, the Commission recommended that the United Nations Statistical Office, in consultation with the interested specialized agencies, should work on guidelines for national accounts statistics (national income and expenditure), taking into consideration best practices and international comparability<sup>2</sup>. In view of the emphasis on international statistical standards, the first national accounts standard was produced and published in 1953. The SNA was subsequently revised and updated in 1960, 1964, 1968 and 1993. In 2003 the Statistical Commission called for an update of the 1993 SNA. The System of National Accounts 2008<sup>3</sup>, (in short the 2008 SNA) was finalized in 2009. This chapter describes the concepts and definitions of the SNA as recommended by the 1993 SNA.

## A. THE SNA AS A SYSTEM

2. The System of National Accounts is a statistical framework that provides a coherent, consistent and integrated set of macroeconomic accounts, balance sheets and tables based on a set of internationally agreed concepts, definitions, classifications and accounting rules. It provides a comprehensive accounting framework within which economic data can be compiled and presented in a format that is designed for purposes of economic analysis, decision-taking and policy-making. The accounts themselves present in a condensed way a great mass of detailed information, organized according to economic principles and perceptions, about the working of an economy. They provide a comprehensive and detailed record of the complex economic activities taking place within an economy and of the interaction between the different economic agents, and groups of agents that takes place on markets or elsewhere. In practice the accounts are compiled for a succession of time periods, thus providing a continuing flow of information that is indispensable for the monitoring, analysis and evaluation of the performance of an economy over time. The SNA provides information not only about economic activities, but also about the levels of an economy's productive assets and the wealth of its inhabitants at particular points of time. Finally, the SNA includes an external account that displays the links between an economy and the rest of the world.

3. The SNA may be implemented at different levels of aggregation: at the level of individual economic agents, or institutional units as they are called in the System; for groups of such units, or institutional sectors; or at the level of the total economy. Although traditionally described as a system of national accounts, for analytical purposes the SNA has to be implemented at lower levels of aggregation. In order to understand the workings of the economy, it is essential to be able to observe and analyze the economic interactions taking place between the different sectors of the economy. Certain key aggregate statistics, such as gross domestic product (GDP), which are widely used as indicators of economic activity at the level of the total economy, are defined within the System, but the calculation of such aggregates has long ceased to be the primary purpose for compiling the accounts.

4. The System is built around a sequence of interconnected flow accounts linked to different types of economic activity taking place within a given period of time, together with balance sheets that record the values of the stocks of assets and liabilities held by institutional units or sectors at the beginning and end of the period. Each flow account relates to a particular kind of activity such as production, or the generation, distribution, redistribution or use of income. Each account is balanced by introducing a balancing item defined residually as the difference between the total resources and uses recorded on the two sides of the account. The balancing item from one account is carried forward as the first item in the following account, thereby making the sequence of accounts an articulated whole. The balancing items typically encapsulate the net result of the activities covered by the accounts in question and are therefore economic constructs of considerable interest and analytical significance - for example, value added, disposable income and saving. There is also a strong link between the flow accounts and the balance sheets, as all the changes occurring over time that affect the assets or liabilities held by institutional units or sectors are systematically recorded in one or another of the flow accounts. The closing balance sheet is fully determined by the opening balance sheet and the transactions or other flows recorded in the sequence of accounts.

## B. ACCOUNTS AND THEIR CORRESPONDING ECONOMIC ACTIVITIES

5. The purpose of this section is to give a very brief summary of the main sequence of accounts in order to describe the main features of the System before discussing other related issues. It is impossible to do justice to the wealth of information contained in the System in a short section of this kind, and reference should be made to

chapter II of the 1993 SNA for a comprehensive overview of the System.

### *1. The sequence of accounts*

#### *Current accounts*

6. These accounts record the production of goods and services, the generation of incomes by production, the subsequent distribution and redistribution of incomes among institutional units, and the use of incomes for purposes of consumption or saving.

#### *Production account*

7. The production account records the activity of producing goods and services as defined within the System. Its balancing item, gross value added, is defined as the value of output less the value of intermediate consumption and is a measure of the contribution to GDP made by an individual producer, industry or sector. Gross value added is the source from which the primary incomes of the System are generated and is therefore carried forward into the primary distribution of income account. Value added may also be measured net by deducting consumption of fixed capital.

#### *Distribution and use of income accounts*

8. These consist of a set of articulated accounts showing how incomes are:

Generated by production

Distributed to institutional units with claims on the value added created by production

Redistributed among institutional units, mainly by government units through social security contributions and benefits and taxes

Eventually used by households, government units or non-profit institutions serving households (NPISHs) for purposes of final consumption or saving.

9. The balancing item emerging from the complete set of income accounts is saving. The income accounts have considerable intrinsic economic interest in themselves. In particular, they are needed to explain the behaviour of institutional units as final consumers - that is, as users of the goods and services emanating from production for the satisfaction of the individual and collective needs and wants of households and the community. The balancing item, saving, is carried forward

into the capital account, the first in the System's sequence of accumulation accounts.

#### *Accumulation accounts*

10. These are flow accounts that record the acquisition and disposal of financial and non-financial assets and liabilities by institutional units through transactions or as a result of other events:

The capital account records acquisitions and disposals of non-financial assets as a result of transactions with other units or internal bookkeeping transactions linked to production (changes in inventories and consumption of fixed capital).

The financial account records acquisitions and disposals of financial assets and liabilities, also through transactions.

A third account, the other changes in assets account, consists of two sub-accounts. The first, the other changes in volume of assets account, records changes in the amounts of the assets and liabilities held by institutional units or sectors as a result of factors other than transactions; for example, destruction of fixed assets by natural disasters. The second, the revaluation account, records those changes in the values of assets and liabilities that result from changes in their prices.

11. The link between the accumulation accounts and the income accounts is provided by the fact that saving - that is, disposable income that is not spent on consumption goods or services - must be used to acquire financial or non-financial assets of one kind or another, if only cash, the most liquid financial asset. When saving is negative, the excess of consumption over disposable income must be financed by disposing of assets or incurring liabilities. The financial account shows the way in which funds are channelled from one group of units to another, especially through financial intermediaries. Access to finance is a prerequisite for engaging in many types of economic activities.

#### *Balance sheets*

12. The balance sheets show the values of the stocks of assets and liabilities held by institutional units or sectors at the beginning and end of an accounting period. As already noted, the values of the assets and liabilities held at any moment in time vary automatically whenever any transactions, price changes or other changes affecting the volume of assets or liabilities held take place. These are all recorded in one or another of the accumulation accounts so

that the difference between the values in the opening and closing balance sheets is entirely accounted for within the System, provided, of course, that the assets and liabilities recorded in the balance sheets are valued consistently with the transactions and other changes - that is, at current prices.

## 2. *Activities and transactions*

13. The accounts of the System are designed to provide analytically useful information about the behaviour of institutional units and the activities in which they engage, such as production, consumption and the accumulation of assets. They usually do this by recording the values of the goods, services or assets involved in the transactions between institutional units that are associated with these activities rather than by trying to record or measure the physical processes directly. For example, the accounts do not record the physical consumption of goods and services by households - the eating of food or the burning of fuel within a given time period. Instead, they record the expenditures that households make on final consumption goods and services or, more generally, the values of the goods and services they acquire through transactions with other units, whether purchased or not. Data on transactions provide the basic source material from which the values of the various elements in the accounts are built up or derived. The use of transactions data has important advantages. First, the prices at which goods and services are exchanged in transactions between buyers and sellers on markets provide the information needed for valuing, directly or indirectly, all the items in the accounts. Secondly, a transaction that takes place between two different institutional units has to be recorded for both parties to the transaction and therefore generally appears twice in a system of macroeconomic accounts. This enables important linkages to be established in the System. For example, output is obtained by summing the amounts sold, bartered or transferred to other units plus the amounts entered into, less the amounts withdrawn from inventories. In effect, the value of output is obtained by recording the various uses of that output by means of data on transactions. In this way, flows of goods and services can be traced through the economic system from their producers to their eventual users. Some transactions are only internal bookkeeping transactions that are needed when a single unit engages in two activities, such as the production and consumption of the same good or service, but the great majority of transactions take place between different units on markets.

## C. THE INSTITUTIONAL SECTORS OF THE ECONOMY

14. The purpose of this section is to indicate very briefly the main sectors of the economy for which it is

possible to compile the full sequence of accounts summarized in the previous section. Two main kinds of institutional units, or transactors, are distinguished in the System - households and legal entities. The latter are either entities created for purposes of production, mainly corporations and non-profit institutions (NPIs), or government units, including social security funds. Institutional units are essentially units that are capable of owning goods and assets, incurring liabilities and engaging in economic activities and transactions with other units in their own right. For the purposes of the System, institutional units that are resident in the economy are grouped together into five mutually exclusive sectors composed of the following types of units:

Non-financial corporations

Financial corporations

Government units, including social security funds

NPIs serving households (NPISHs)

Households.

The five sectors together make up the total economy. Each sector is also divided into sub-sectors. For example, the non-financial and financial corporations sectors are divided to distinguish corporations subject to control by governments or foreign units from other corporations. The System makes provision for a complete set of flow accounts and balance sheets to be compiled for each sector, and sub-sector if desired, as well as for the total economy. The total number of accounts that may be compiled is therefore potentially quite large, depending upon the level of disaggregation that is required and feasible. Only by disaggregation into sectors and sub-sectors is it possible to observe the interactions between the different parts of the economy that need to be measured and analyzed for purposes of policy-making. The complete set of accounts at the level of the five main sectors is shown in annex V of the 1993 SNA.

15. Institutional units that are resident abroad form the rest of the world. The System does not require accounts to be compiled in respect of economic activities taking place in the rest of the world, but all transactions between resident and non-resident units have to be recorded in order to obtain a complete accounting for the economic behaviour of resident units. Transactions between residents and non-residents are grouped together in a single account, the rest of the world account.

## D. OTHER FEATURES OF THE SYSTEM

16. The SNA is a rich and detailed economic accounting system that extends well beyond the main sequence of accounts to encompass other accounts or tables that either contain information that cannot be included in the main accounts or present information in alternative ways, such as matrices, that may be more appropriate for certain types of analysis. It is not proposed to list all these various elements at this point, as they are described in chapter II of the 1993 SNA, but it is useful to draw attention to two specific elements which play a major role in the System.

### *1. Supply and use tables*

17. In addition to the flow accounts and balance sheets described earlier, the central framework of the System also contains detailed supply and use tables in the form of matrices that record how supplies of different kinds of goods and services originate from domestic industries and imports and how those supplies are allocated between various intermediate or final uses, including exports. These tables involve the compilation of a set of integrated production and generation of income accounts for industries - that is, groups of establishments as distinct from institutional units - that are able to draw upon detailed data from industrial censuses or surveys. The supply and use tables provide an accounting framework within which the commodity flow method of compiling national accounts - in which the total supplies and uses of individual types of goods and services have to be balanced with each other - can be systematically exploited. The supply and use tables also provide the basic information for the derivation of detailed input-output tables that are extensively used for purposes of economic analysis and projections.

### *2. Price and volume measures*

18. The System also provides specific guidance about the methodology to be used to compile an integrated set of price and volume indices for flows of goods and services, gross value added and GDP that are consistent with the concepts and accounting principles of the System. It is recommended that annual chain indices should be used where possible, although fixed base indices may also be used when the volume measures for components and aggregates have to be additively consistent for purposes of economic analysis and modelling.

19. Rates of inflation and economic growth appropriately measured by price and volume indices for the main aggregates of the System are key variables both for the evaluation of past economic performance and as targets for the formulation of economic policy-making. They are an essential part of the System, especially given the

emergence of inflation as an endemic economic problem in many countries. The System also recognizes that the growth in the volume of GDP and the growth of an economy's real income are not the same because of trading gains or losses resulting from changes in international terms of trade.

## E. CONCEPTS

20. The contents of the SNA depend not only on the accounting structure itself - that is, on the type and format of the accounts - but also on the ways in which the items included in the accounts are defined and classified. The issues involved are not simply of a technical nature but raise fundamental questions of economic theory and principles. The concepts and classifications used in the System have a considerable impact on the ways in which the data may be used and the interpretations placed on them.

### *1. The production boundary*

21. The activity of production is fundamental. In the System, production is understood to be a physical process, carried out under the responsibility, control and management of an institutional unit, in which labour and assets are used to transform inputs of goods and services into outputs of other goods and services. All goods and services produced as outputs must be such that they can be sold on markets or at least be capable of being provided by one unit to another, with or without charge. The System includes within the production boundary all production actually destined for the market, whether for sale or barter. It also includes all goods or services produced and provided free to individual households or collectively to the community by government units or NPISHs.

### *Household production*

22. The main problem for defining the range of activities recorded in the production accounts of the System is to decide upon the treatment of activities that produce goods or services that could have been supplied to others on the market but are actually retained by their producers for their own use. These cover a very wide range of productive activities, in particular:

- (a) The production of agricultural goods by household enterprises for own final consumption;
- (b) The production of other goods for own final use by households: the construction of dwellings, the production of foodstuffs and clothing, etc.;
- (c) The production of housing services for own final consumption by owner occupiers;

(d) The production of domestic and personal services for consumption within the same household: the preparation of meals, care and training of children, cleaning, repairs, etc.

All of these activities are productive in an economic sense. However, inclusion in the System is not simply a matter of estimating monetary values for the outputs of these activities. If values are assigned to the outputs, values have also to be assigned to the incomes generated by their production and to the consumption of the output. It is clear that the economic significance of these flows is very different from that of monetary flows. For example, the incomes generated are automatically tied to the consumption of the goods and services produced; they have little relevance for the analysis of inflation or deflation or other disequilibria within the economy. The inclusion of large non-monetary flows of this kind in the accounts together with monetary flows can obscure what is happening on markets and reduce the analytic usefulness of the data.

23. The SNA is a multi-purpose system. It is designed to meet wide a range of analytical and policy needs. A balance has to be struck between the desire for the accounts to be as comprehensive as possible and the need to prevent flows used for the analysis of market behaviour and disequilibria from being swamped by non-monetary values. The System therefore includes all production of goods for own use within its production boundary, as goods can be switched between market and non-market use even after they have been produced, but it excludes all production of services for own final consumption within households (except for the services produced by employing paid domestic staff and the own-account production of housing services by owner occupiers). These services are consumed as they are produced and the links between their production and market activities are more tenuous than for goods production, such as agricultural goods which households may produce partly for own final consumption and partly for sale, or barter, on the market. The location of the production boundary in the System is a compromise, but a deliberate one that takes account of the needs of most users. In this context it may be noted that in labour force statistics economically active persons are defined as those engaged in productive activities as defined in the SNA. If the production boundary were extended to include the production of personal and domestic services by members of households for their own final consumption, all persons engaged in such activities would become self-employed, making unemployment virtually impossible by definition. This illustrates the need to confine the production boundary in the SNA and other related statistical systems to market activities or fairly close substitutes for market activities.

#### *Other production boundary problems*

24. Certain natural processes may or may not be counted as production depending upon the circumstances in which they occur. A necessary condition for an activity to be treated as productive is that it must be carried out under the instigation, control and responsibility of some institutional unit that exercises ownership rights over whatever is produced. For example, the natural growth of stocks of fish in open seas is not counted as production: the process is not managed by any institutional unit and the fish do not belong to any institutional unit. On the other hand, the growth of fish in fish farms is treated as a process of production in much the same way that rearing livestock is a process of production. Similarly, the natural growth of wild, uncultivated forests or wild fruits or berries is not counted as production, whereas the cultivation of crop-bearing trees, or trees grown for timber or other uses, is counted in the same way as the growing of annual crops. However, the deliberate felling of trees in wild forests, and the gathering of wild fruit or berries, and also firewood, counts as production. Similarly, rainfall and the flow of water down natural watercourses are not processes of production, whereas storing water in reservoirs or dams and the piping, or carrying, of water from one location to another all constitute production.

25. These examples show that many activities or processes that may be of benefit to institutional units, both as producers and consumers, are not processes of production in an economic sense. Rainfall may be vital to the agricultural production of a country but it is not a process of production whose output can be included in GDP.

#### *2. The consumption boundary*

26. The coverage of production in the System has ramifications that extend considerably beyond the production account itself. The boundary of production determines the amount of value added recorded and hence the total amount of income generated by production. The range of goods and services that are included in household final consumption expenditures, and actual consumption, is similarly governed by the production boundary; for example, these expenditures include the estimated values of the agricultural products consumed by households that they have produced themselves and also the values of the housing services consumed by owner occupiers, but not the values of "do-it-yourself" repairs and maintenance to vehicles or household durables, the cleaning of dwellings, the care and training of children, or similar domestic or personal services produced for own final consumption. Only the expenditures on goods utilized for these purposes - e.g., cleaning materials - are included in household final consumption expenditures.

### 3. *The asset boundary*

27. Balance sheets are compiled for institutional units, or sectors, and record the values of the assets they own or the liabilities they have incurred. Assets as defined in the System are entities that must be owned by some unit, or units, and from which economic benefits are derived by their owner(s) by holding or using them over a period of time. Financial assets and fixed assets are clearly covered by this definition. However, the ownership criterion is important for determining which naturally occurring - i.e., non-produced - assets are included in the System. Naturally occurring assets such as land, mineral deposits, fuel reserves, uncultivated forests or other vegetation and wild animals are included in the balance sheets provided that institutional units are exercising effective ownership rights over them - that is, are actually in a position to be able to benefit from them. Assets need not be privately owned and could be owned by government units exercising ownership rights on behalf of entire communities. Thus, many environmental assets are included within the System. Assets that are not included are those such as the atmosphere or open seas, over which no ownership rights can be exercised, or mineral or fuel deposits that have not been discovered or that are unworkable - i.e., incapable of bringing any benefits to their owners, given the technology and relative prices existing at the time.

28. Changes in the values of naturally occurring assets owned by institutional units between one balance sheet and the next are recorded in the accumulation accounts of the System. For example, the depletion of a natural asset as a result of its use in production is recorded in the other changes in volume of assets account, together with losses of fixed assets due to their destruction by natural disasters (floods, earthquakes, etc.). Conversely, when deposits or reserves of minerals or fuels are discovered or previously unworkable deposits become workable, their appearance is recorded in this account and they enter the balance sheets in this way.

### 4. *National boundaries*

29. The accounts of the System are compiled for resident institutional units grouped into institutional sectors and sub-sectors. The concept of residence is the same as that used in the Balance of Payments Manual of the International Monetary Fund (IMF). An institutional unit is said to be resident within the economic territory of a country when it maintains a centre of economic interest in that territory - that is, when it engages, or intends to engage, in economic activities or transactions on a significant scale either indefinitely or over a long period of time, usually interpreted as one year. As an aggregate measure of production, the GDP of a country is equal to the sum of the gross values added of all resident institutional

units engaged in production (plus any taxes, and minus any subsidies, on products not included in the value of their outputs). This is not exactly the same as the sum of the gross values added of all productive activities taking place within the geographical boundaries of the national economy. Some of the production of a resident institutional unit may take place abroad - for example, the installation of some exported machinery or equipment or a consultancy project undertaken by a team of expert advisers working temporarily abroad. Conversely, some of the production taking place within a country may be attributable to foreign institutional units.

### F. USES OF THE SNA

30. The SNA is a multi-purpose system, as stated above, designed for economic analysis, decision-taking and policy-making, whatever the industrial structure or stage of economic development reached by a country. The basic concepts and definitions of the System depend upon economic reasoning and principles which should be universally valid and invariant to the particular economic circumstances in which they are applied. Similarly, the classifications and accounting rules are meant to be universally applicable. There is no justification, for example, for seeking to define the components of a production account - output, intermediate consumption and gross value added - differently in less developed than in more developed economies, or in large relatively closed economies than in small open economies, or in high-inflation economies than in low-inflation economies. Certain definitions, or accounting rules, specified in the System may become superfluous in certain circumstances (e.g., when there is no inflation), but it is nevertheless necessary for a general system such as the SNA to include definitions and rules covering as wide a range of circumstances as possible.

31. The fact that data needs and priorities, and also statistical capabilities, may vary considerably between different kinds of countries does not justify the construction of different systems with different concepts, definitions, classifications or accounting rules. Some countries may be able, at least initially, to calculate only a small number of accounts and tables for the total economy with little or no disaggregation into sectors, but a reduced set of accounts or tables does not constitute an alternative system. It is not appropriate to try to lay down general priorities for data collection when economic circumstances may vary so much from one country to another. In practice, priorities can only be established country by country by economic analysts or policy-makers familiar with the economic situation, needs and problems of the individual countries in question. It is not useful, for example, to try to specify general priorities for developing countries when they constitute a very heterogeneous group of countries at

a world level. Data priorities may vary as much between one developing country and another as between a developing and a developed country.

### *1. Specific uses*

32. The main objective of the SNA is to provide a comprehensive conceptual and accounting framework which can be used to create a macroeconomic database suitable for analyzing and evaluating the performance of an economy. The existence of such a database is a prerequisite for informed, rational policy-making and decision-taking. Some of the more specific uses of the SNA are described in the following sections.

#### *Monitoring the behaviour of the economy*

33. National accounts data provide information covering both different types of economic activities and the different sectors of the economy. It is possible to monitor the movements of major economic flows such as production, household consumption, government consumption, capital formation, exports, imports, wages, profits, taxes, lending, borrowing, etc., the flows of goods and services being recorded at both current and constant prices. Moreover, information is provided about certain key balancing items and ratios which can only be defined and measured within an accounting framework - for example, the budget surplus or deficit, the share of income which is saved, or invested, by individual sectors of the economy or the economy as a whole, the trade balance, etc. National accounts also provide the background against which movements of short-term indicators, such as monthly indices of industrial production or of consumer or producer prices, can be interpreted and evaluated. The monitoring of the behaviour of the economy may be significantly improved if at least some of the main aggregates of the System are compiled quarterly as well as annually, although many of the accounts, tables or balance sheets of the System are not usually compiled more frequently than once a year.

#### *Macroeconomic analysis*

34. National accounts are also used to investigate the causal mechanisms at work within an economy. Such analysis usually takes the form of the estimation of the parameters of functional relationships between different economic variables by applying econometric methods to time series data at both current and constant prices which are compiled within a national accounting framework. The types of macroeconomic models used for such investigations may vary according to the school of economic thought of the investigator as well as the objectives of the analysis, but the System is sufficiently flexible to accommodate the requirements of different economic theories or models, provided only that they

accept the basic concepts of production, consumption, income, etc. on which the System is based.

35. Advances in computer technology have made it possible for the econometric analysis of large macroeconomic models to be carried out on microcomputers. Many econometric software packages have been developed for this purpose so that this kind of modelling is no longer confined to a few government departments, research institutes or universities with large mainframe computers. It is increasingly being undertaken by private corporations or institutions with only limited resources available for these purposes.

#### *Economic policy-making and decision-taking*

36. Economic policy in the short term is formulated on the basis of an assessment of the recent behaviour and current state of the economy and a view, or precise forecast, about likely future developments. Short-term forecasts are typically made using econometric models of the type just described. Over the medium- or long-term, economic policy has to be formulated in the context of a broad economic strategy which may need to be quantified in the form of a plan. Most of the elements which make up a medium- or long-term economic plan consist of national accounts flows, and it may be impossible to draw up such a plan without them. A good macroeconomic model which accurately reflects the past performance of the economy may be indispensable for planning as well as forecasting.

37. Economic policy-making and decision-taking take place at all levels of government and also within public and private corporations. Large corporations such as multinationals have the ability to build their own macroeconomic models tailored to their own requirements, for which they need national accounts data. The investment programmes of major corporations must be based on long-term expectations about future economic developments that require national accounts data. There are also, of course, specialist agencies that provide forecasts for individual clients in return for fees. Such agencies typically require very detailed national accounts data.

#### *International comparisons*

38. The SNA is the system used for reporting to international or supranational organizations national accounts data that conform to standard, internationally accepted concepts, definitions and classifications. The resulting data are widely used for international comparisons of the volumes of major aggregates, such as GDP or GDP per head, and also for comparisons of structural statistics, such as ratios of investment, taxes or government expenditures to GDP. Such comparisons are used by economists, journalists or other analysts to

evaluate the performance of one economy against that of other similar economies. They can influence popular and political judgements about the relative success of economic programmes in the same way as developments over time within a single country. Databases consisting of sets of national accounts for groups of countries can also be used for econometric analyses in which time-series and cross-section data are pooled to provide a broader range of observations for the estimation of functional relationships.

39. Levels of GDP or, alternatively, gross national income (GNI) per head in different countries are also used by international organizations to determine eligibility for loans, aid or other funds or to determine the terms or conditions on which such loans, aid or funds are made available. When the objective is to compare the volumes of goods or services produced or consumed per head, data in national currencies must be converted into a common currency by means of purchasing power parities and not exchange rates. It is well known that, in general, neither market nor fixed exchange rates reflect the relative internal purchasing powers of different currencies. When exchange rates are used to convert GDP, or other statistics, into a common currency the prices at which goods and services in high-income countries are valued tend to be higher than in low-income countries, thus exaggerating the differences in real incomes between them. Exchange rate converted data must not, therefore, be interpreted as measures of the relative volumes of goods and services concerned. Levels of GDP, or GDP per head, in different countries are also used to determine, in whole or in part, the size of the contributions which the member countries of an international organization make to finance the operations of the organization.

40. Although international organizations use the SNA in order to be able to collect internationally comparable national accounts data, the SNA has not been created for this purpose. It has become the standard, or universal, system used with little or no modification by most countries in the world for their own national purposes. National statistical offices and government agencies have a strong vested interest in ensuring that the SNA meets their own analytic and policy requirements and have taken an active part in the development of the System for this reason.

## *2. Flexibility of implementation and use*

41. The SNA is designed to be sufficiently comprehensive that individual countries, whatever their economic structures, institutional arrangements or level of development, can select from within it those parts of the System which are considered to be most relevant and useful to implement in the light of their own needs and capabilities. The SNA is meant to be implemented in a

flexible manner and the accounts and tables, classifications and sectoring presented in this volume should not be regarded as fixed. In some cases, the System explicitly insists on flexibility. For example, two alternative methods of sub-sectoring the general government sector are proposed in chapter IV of the 1993 SNA without either being assigned priority. Similarly, although the System suggests sub-sectoring the households sector on the basis of the household's principal source of income, it stresses that this is only one possible criterion for sub-sectoring. In some cases, it may be more appropriate to sub-sector on the basis of socio-economic criteria or the type of area in which the household is located or, indeed, to carry the disaggregation of the households sector further by using two or more criteria together in a hierarchical manner.

42. Ways in which the System may be adapted to meet differing circumstances and needs are specifically addressed in chapter XIX of the 1993 SNA. For example, classifications of institutional units, transactions and assets may be implemented flexibly in order to adapt them to the data availability and special circumstances of different countries. The flexible use of classifications does not change the basic concepts and definitions of the System. However, as explained in chapter XXI of the 1993 SNA, flexibility may be taken a stage further by developing satellite accounts that are closely linked to the main System but are not bound to employ exactly the same concepts or restricted to data expressed in monetary terms. Satellite accounts are intended for special purposes such as monitoring the community's health or the state of environment. They may also be used to explore new methodologies and to work out new accounting procedures that, when fully developed and accepted, may become absorbed into the main System in the course of time, in the way that input-output analysis, for example, has been integrated into the System.

43. Another way in which the System may be implemented flexibly is by rearranging the data in the accounts in the form of a social accounting matrix in order better to serve particular analytical and policy needs. Such matrices should not be construed as constituting different systems but as alternative ways of presenting the mass of information contained in the System which many users and analysts find more informative and powerful for both monitoring and modelling social and economic development.

## *3. The SNA as a coordinating framework for statistics*

44. The System also has a very important statistical function by serving as a coordinating framework for economic statistics in two different senses: first, as the conceptual framework for ensuring the consistency of the definitions and classifications used in different, but related,

fields of statistics, and secondly, as an accounting framework for ensuring the numerical consistency of data drawn from different sources, such as industrial inquiries, household surveys, merchandise trade statistics, VAT returns and other administrative sources.

#### G. HARMONIZATION BETWEEN DIFFERENT STATISTICAL SYSTEMS

45. The SNA and related statistical systems need to be as consistent as possible in respect of their basic concepts, definitions and classifications. National accounts have always occupied a central position in economic statistics because the data from more specialized systems, such as balance of payments or labour force statistics, typically have to be used in conjunction with national accounts data. Consistency between the different systems enhances the analytical usefulness of all the statistics involved. The harmonization of the SNA and related statistical systems, such as financial statistics or balance of payments statistics, has been one of the driving forces behind revisions of the System.

46. Revisions of other statistical systems have been conducted in parallel with, and in close collaboration with, that of the SNA in order to eliminate conceptual differences between them other than a few exceptions that can be specifically justified in terms of the special characteristics of different kinds of data, or the special requirements of different kinds of users. Harmonization between the SNA and other major systems has been largely successful and has been achieved by making changes to the SNA as well as to the other systems.

47. Because of the active involvement of the IMF in the revision of the 1993 SNA, the harmonization process has been particularly effective in respect of balance of payments statistics, government finance statistics and money and banking statistics. Each of these three systems was updated to be consistent with the 1993 SNA to the fullest extent possible.

48. Various other revised international guidelines were issued at about the same time as the 1993 SNA. These include the third revision of the United Nations International Standard Industrial Classification of All Economic Activities (ISIC), the industrial classification that is used in the 1993 SNA. The establishment as described in ISIC is also the statistical unit used to compile the production accounts by industry that make up supply and use tables of the SNA, the concept of the establishment being the same in both the SNA and ISIC. The International Labour Organisation (ILO) has issued revised standards on labour statistics that define employment in a way that is consistent with the boundary of production in the SNA, as summarized earlier in this chapter. An extract from the resolution of the Fifteenth International

Conference of Labour Statisticians concerning the distinction between the formal and informal sectors is reproduced as an annex to chapter IV of the 1993 SNA. Another example is provided by the revised Handbook on Agricultural Accounts, prepared by the Food and Agricultural Organization of the United Nations (FAO), which has been brought into line with the treatment of agricultural products and activities in the SNA. It is neither necessary nor feasible to list here all the revisions to international statistical systems and standards that are being undertaken or planned as it is the policy of all the various international agencies involved at a world level to harmonize these systems with each other and with the SNA to the fullest extent possible.

#### H. IMPLEMENTATION OF CONCEPTS

49. The contents of the accounts are determined not only by the conceptual framework, definitions and classifications of the System but also by the ways in which they are interpreted and implemented in practice. However simple and precise concepts and classifications may appear in principle, there are inevitably difficult borderline cases which cannot easily be fitted into predetermined categories. These points may be illustrated by considering a fundamental distinction in economics and in the System, namely, the distinction between consumption and gross fixed capital formation (or gross fixed investment, as it is often described in other contexts).

##### *1. Final consumption, intermediate consumption and gross fixed capital formation*

50. Consumption is an activity in which institutional units use up goods or services. There are two quite different kinds of consumption. Intermediate consumption consists of inputs into processes of production that are used up within the accounting period. Final consumption consists of goods and services used by individual households or the community to satisfy their individual or collective needs or wants. The activity of gross fixed capital formation, on the other hand, is restricted to institutional units in their capacity as producers, being defined as the value of their acquisitions less disposals of fixed assets. Fixed assets are produced assets (mostly machinery, equipment, buildings or other structures but also including some intangible assets) that are used repeatedly or continuously in production over several accounting periods (more than one year).

51. The general nature and purpose of the distinction between gross fixed capital formation and consumption, whether intermediate or final, is clear. The distinction is fundamental for economic analysis and policy-making. Nevertheless, the borderline between consumption and gross fixed capital formation is not always easy to

determine in practice. Certain activities contain some elements that appear to be consumption and at the same time others that appear to be capital formation. In order to try to ensure that the System is implemented in a uniform way decisions have to be taken about the ways in which certain difficult, even controversial, items are to be classified. Some examples are given below.

#### *Training, research and development*

52. Expenditures by enterprises on activities such as staff training or research and development are not the type of intermediate inputs whose consumption is determined by the level at which production is carried out in the current period but are designed to raise productivity or increase the range of production possibilities in the future, in much the same way as expenditures on machinery, equipment, buildings and other structures. However, expenditures on training and research or development do not lead to the acquisition of assets that can be easily identified, quantified and valued for balance sheet purposes. Such expenditures continue to be classified as intermediate consumption, therefore, even though it is recognized that they may bring future benefits. In fact, many other expenditures undertaken by enterprises may also have impacts in future periods as well as the current period - for example, market research, advertising and expenditures on health and safety that affect the well-being and attitudes of the workforce.

#### *Education*

53. It is often proposed that expenditures on education should also be classified as gross fixed capital formation as a form of investment in human capital. The acquisition of knowledge, skills and qualifications increases the productive potential of the individuals concerned and is a source of future economic benefit to them. However, while knowledge, skills and qualifications are clearly assets in a broad sense of the term, they cannot be equated with fixed assets as understood in the System. They are not produced because they are acquired through learning, studying and practicing - activities that are not themselves processes of production. The education services produced by schools, colleges, universities, etc. are consumed by students in the process of their acquiring knowledge and skills. Education assets are embodied in individuals as persons. They cannot be transferred to others and cannot be shown in the balance sheets of the enterprises in which the individuals work (except in rare cases when certain highly skilled individuals are under contract to work for particular employers for specified periods). Education assets could possibly be shown in balance sheets for the individuals in which they are embodied, but individuals are not enterprises. They would be difficult to value, bearing in mind that the remuneration received by a skilled worker depends upon the amount of

time and effort expended and is not simply a return payable to the owner of an asset.

54. It may also be noted that final consumption consists of the use of goods and services for the direct satisfaction of human needs or wants, individually or collectively. Education services are undoubtedly consumed in this sense. They increase the welfare and improve the general quality of life of those consuming them. Moreover, they are not the only services consumed by individuals to bring long- as well as short-term benefits. For example, the consumption of health services brings long-term benefits and even the consumption of basic items such as food and housing is necessary in order to keep an individual in good health - and good working order.

#### *Repairs, maintenance and gross fixed capital formation*

55. Another, less familiar, example of the intrinsic difficulty of trying to draw a dichotomy between consumption and gross fixed capital formation is provided by repairs and maintenance. Ordinary maintenance and repairs undertaken by enterprises to keep fixed assets in good working order are intermediate consumption. However, major improvements, additions or extensions to fixed assets, both machinery and structures, which improve their performance, increase their capacity or prolong their expected working lives count as gross fixed capital formation. In practice it is not easy to draw the line between ordinary repairs and major improvements, although the System provides certain guidelines for this purpose. Some analysts, however, consider that the distinction between ordinary repairs and maintenance and major improvements and additions is neither operational nor defensible and would favour a more "gross" method of recording in which all such activities are treated as gross fixed capital formation.

#### *2. Interpretation of the distinction between consumption and gross fixed capital formation*

56. The examples given above show that a simple dichotomy between consumption and gross fixed capital formation inevitably presents problems when dealing with flows of goods and services that do not fit comfortably under either heading. The issue is not simply how to classify certain flows, but also how to achieve an economically meaningful and feasible set of accounting procedures for the assets acquired through gross fixed capital formation within an integrated, coherent set of accounts encompassing past and future periods as well as the present.

57. Some care and sophistication is needed in using the accounts. For example, goods and services "consumed"

by households - i.e., acquired for the satisfaction of their needs or wants - are not suddenly "used up" and do not "vanish" at the moment of acquisition. In particular, households "consuming" services such as health and education may continue to derive benefits over long periods of time. The "consumption" of such services therefore has points of similarity with "investment" in assets. Similarly, enterprises may continue to benefit over long periods of time from the intermediate consumption of services such as maintenance and repairs, training, research and development, market research, etc. Thus, while the acquisition of fixed assets by enterprises - that is, gross fixed capital formation - is undertaken specifically to enhance future production possibilities, they are not the only types of expenditure that may be expected to bring future benefits.

58. The decision whether to classify certain types of expenditure by households or government, such as education or health services, as final consumption expenditures or gross fixed capital formation does not affect the size of GDP, as both are final expenditures. On the other hand, the decision to classify certain expenditures by enterprises as intermediate consumption rather than gross fixed capital formation does reduce the gross value added and operating surplus of the enterprise and hence GDP as a whole. However, treating certain expenditures as intermediate reduces not only gross fixed capital formation but also consumption of fixed capital in subsequent periods. It is therefore an open question as to how net value added and net domestic product (NDP) are affected in the longer term, depending upon the pattern of the relevant expenditures over time.

## I. DEFINITIONS OF IMPORTANT TERMS (GLOSSARY)

### *Acquisitions*

Goods and services are acquired by institutional units when they become the new owners of the goods or when the delivery of services to them is completed.

### *Actual final consumption of general government*

Actual final consumption of general government is measured by the value of the collective (as opposed to individual) consumption services provided to the community, or large sections of the community, by general government; it is derived from their final consumption expenditure by subtracting the value of social transfers in kind payable.

### *Actual final consumption of households*

Actual final consumption of households is the value of the consumption goods acquired by households, whether by purchase in general, or by transfer from government units or NPISHs, and used by them for the satisfaction of their needs and wants; it is derived from their final consumption expenditure by adding the value of social transfers in kind receivable.

### *Actual final consumption of NPISHs*

NPISHs have no actual final consumption because most of the services provided by NPISHs are individual in nature and, for simplicity, all services provided by NPISHs are treated by convention as social transfers.

### *Additivity*

Additivity is a property pertaining to a set of interdependent index numbers related by definition or by accounting constraints under which an aggregate is defined as the sum of its components; additivity requires this identity to be preserved when the values of both an aggregate and its components in some reference period are extrapolated over time using a set of volume index numbers.

### *Base period*

The period that provides the weights for an index is described as the base period.

### *Basic price*

The basic price is the amount receivable by the producer from the purchaser for a unit of a good or service produced as output minus any tax payable, and plus any subsidy receivable, on that unit as a consequence of its production or sale; it excludes any transport charges invoiced separately by the producer.

### *C.i.f. price*

The c.i.f. price (i.e. cost, insurance and freight price) is the price of a good delivered at the frontier of the importing country, including any insurance and freight charges incurred to that point, or the price of a service delivered to a resident, before the payment of any import duties or other taxes on imports or trade and transport margins within the country.

### *Capital transfers*

Capital transfers are transactions in which the ownership of an asset (other than cash and inventories) is transferred

from one institutional unit to another, in which cash is transferred to enable the recipient to acquire another asset or in which the funds realized by the disposal of another asset are transferred.

#### *Chain indices*

Chain indices are obtained by linking price (or volume) indices for consecutive periods by using weighting patterns appropriate to those periods.

#### *Changes in inventories (including work-in-progress)*

Changes in inventories (including work-in-progress) are measured by the value of the entries into inventories less the value of withdrawals and the value of any recurrent losses of goods held in inventories.

#### *Compensation of employees*

Compensation of employees is the total remuneration, in cash or in kind, payable by enterprises to employees in return for work done by the latter during the accounting period.

#### *Constant prices*

Constant prices are obtained by directly factoring changes over time in the values of flows of goods and services into two components reflecting changes in the prices of the goods and services concerned and changes in their volumes (i.e. changes in “constant price terms”).

#### *Consumption good or service*

A consumption good or service is one that is used (without further transformation in production) by households, NPISHs or government units for the direct satisfaction of individual needs or wants or the collective needs of members of the community.

#### *Consumption of fixed capital*

Consumption of fixed capital represents the reduction in the value of the fixed assets used in production during the accounting period resulting from physical deterioration, normal obsolescence or normal accidental damage.

#### *Current transfers*

Current transfers consist of all transfers that are not transfers of capital; they directly affect the level of disposable income and should influence the consumption of goods or services.

#### *Deductible VAT*

Deductible VAT is the amount of VAT payable on purchases of goods or services intended for intermediate consumption, gross fixed capital formation or for resale which a producer is permitted to deduct from his own VAT liability to the government in respect of VAT invoiced to his customers.

#### *Disposals*

Disposals of assets (inventories, fixed assets or land or other non-produced assets) by institutional units occur when one of those units sells any of the assets to another institutional unit.

#### *Export subsidies*

Export subsidies consist of all subsidies on goods and services that become payable to resident producers when the goods leave the economic territory or when the services are delivered to non-resident units; they include direct subsidies on exports, losses of government trading enterprises in respect of trade with non-residents, and subsidies resulting from multiple exchange rates.

#### *Export taxes*

Export taxes are taxes on goods or services that become payable when the goods leave the economic territory or when the services are delivered to non-residents; they include export duties, profits of export monopolies and taxes resulting from multiple exchange rates.

#### *Exports of goods*

Exports of goods consist of exports of the following items from residents to non-residents, generally with a change of ownership being involved: general merchandise, goods for processing, goods procured in domestic ports by non-resident carriers, and non-monetary gold.

#### *Exports of services*

Exports of services consist of the following services provided by residents to non-residents: transportation; travel; communications; construction; insurance; financial; computer and information; royalties and licence fees; other business services; personal, cultural, and recreational services; and government services n.i.e.

#### *F.o.b. price*

The f.o.b. price (free on board price) is the c.i.f. price less the costs of transportation and insurance charges, between

the customs frontier of the exporting (importing) country and that of the importing (exporting) country.

#### *Factor cost*

Gross value added at factor cost is not a concept used explicitly in the System but it can easily be derived by subtracting the value of any taxes, less subsidies, on production payable out of gross value added.

#### *Final consumption*

Final consumption consists of goods and services used up by individual households or the community to satisfy their individual or collective needs or wants.

#### *Final consumption expenditure of government*

Government final consumption expenditure consists of expenditure, including imputed expenditure, incurred by general government on both individual consumption goods and services and collective consumption services.

#### *Final consumption expenditure of households*

Household final consumption expenditure consists of the expenditure, including imputed expenditure, incurred by resident households on individual consumption goods and services, including those sold at prices that are not economically significant.

#### *Final consumption expenditure of NPISHs*

Final consumption expenditure of NPISHs consists of the expenditure, including imputed expenditure, incurred by resident NPISHs on individual consumption goods and services.

#### *Financial intermediation services indirectly measured (FISIM)*

Financial intermediation services indirectly measured (FISIM) is an indirect measure of the value of financial intermediation services provided but for which financial institutions do not charge explicitly.

#### *Fixed assets*

Fixed assets are tangible or intangible assets produced as outputs from processes of production that are themselves used repeatedly or continuously in other processes of production for more than one year.

#### *Goods*

Goods are physical objects for which a demand exists, over which ownership rights can be established and whose ownership can be transferred from one institutional unit to another by engaging in transactions on markets.

#### *Gross*

The term “gross” is a common means of referring to values before deducting consumption of fixed capital (generally used as in “gross capital stock” or “gross domestic product”).

#### *Gross capital formation*

Gross capital formation is measured by the total value of the gross fixed capital formation, changes in inventories and acquisitions less disposals of valuables for a unit or sector.

#### *Gross domestic product - expenditure based*

Expenditure-based gross domestic product is total final expenditures at purchasers’ prices (including the f.o.b. value of exports of goods and services), less the f.o.b. value of imports of goods and services.

#### *Gross domestic product - income based*

Income-based gross domestic product is compensation of employees, plus taxes less subsidies on production and imports, plus gross mixed income, plus gross operating surplus.

#### *Gross domestic product - output based*

Output-based gross domestic product is the sum of the gross values added of all resident producers at producers’ prices, plus taxes less subsidies on imports, plus all non-deductible VAT (or similar taxes).

#### *Gross domestic product at market prices*

Gross domestic product at market prices is the sum of the gross values added of all resident producers at producers’ prices, plus taxes less subsidies on imports, plus all non-deductible VAT (or similar taxes).

#### *Gross fixed capital formation*

Gross fixed capital formation is measured by the total value of a producer’s acquisitions, less disposals, of fixed assets during the accounting period plus certain additions to the value of non-produced assets (such as subsoil assets or major improvements in the quantity, quality or

productivity of land) realized by the productive activity of institutional units.

#### *Gross national disposable income*

Gross national disposable income may be derived from gross national income by adding all current transfers in cash or in kind receivable by resident institutional units from non-resident units and subtracting all current transfers in cash or in kind payable by resident institutional units to non-resident units.

#### *Gross national income (GNI)*

Gross national income (GNI) is GDP less net taxes on production and imports, less compensation of employees less property income payable to the rest of the world plus the corresponding items receivable from the rest of the world (in other words, GDP less primary incomes payable to non-resident units plus primary incomes receivable from non-resident units); an alternative approach to measuring GNI at market prices is as the aggregate value of the balances of gross primary incomes for all sectors; (note that gross national income is identical to gross national product (GNP) as previously used in national accounts generally).

#### *Gross saving*

Gross saving is gross disposable income less final consumption expenditure.

#### *Gross value added*

Gross value added is the value of output less the value of intermediate consumption; it is a measure of the contribution to GDP made by an individual producer, industry or sector.

#### *Gross value added at basic prices*

Gross value added at basic prices is output valued at basic prices less intermediate consumption valued at purchasers' prices.

#### *Gross value added at producers' prices*

Gross value added at producers' prices is output valued at producers' prices less intermediate consumption valued at purchasers' prices.

#### *Import duties*

Import duties consist of customs duties, or other import charges, which are payable on goods of a particular type when they enter the economic territory.

#### *Import subsidies*

Import subsidies consist of subsidies on goods and services that become payable to resident producers when the goods cross the frontier of the economic territory or when the services are delivered to resident institutional units.

#### *Imports of goods*

Imports of goods consist of imports of the following items from non-residents to residents, generally with a change of ownership being involved: general merchandise, goods for processing, goods procured in foreign ports by domestic carriers, and non-monetary gold.

#### *Imports of services*

Imports of services consist of the following services purchased by residents from non-residents: transportation; travel; communications; construction; insurance; financial; computer and information; royalties and licence fees; other business services; personal, cultural, and recreational services; and government services n.i.e.

#### *Indirect taxes*

As traditionally understood, indirect taxes are taxes that supposedly can be passed on, in whole or in part, to other institutional units by increasing the prices of the goods or services sold but the term "indirect taxes" is not used in 1993 SNA; rather, taxes are specifically identified by their purpose (e.g. taxes on products).

#### *Intermediate consumption*

Intermediate consumption consists of the value of the goods and services consumed as inputs by a process of production, excluding fixed assets whose consumption is recorded as consumption of fixed capital; the goods or services may be either transformed or used up by the production process.

#### *Inventories*

Inventories consist of stocks of outputs that are still held by the units that produced them prior to their being further processed, sold, delivered to other units or used in other ways and stocks of products acquired from other units that are intended to be used for intermediate consumption or for resale without further processing.

#### *Invoiced VAT*

Invoiced VAT is the VAT payable on the sales of a producer; it is shown separately on the invoice which the producer presents to the purchaser.

### *Market prices*

Market prices for transactions are the amounts of money willing buyers pay to acquire something from willing sellers.

### *Mixed income*

Mixed income is the surplus or deficit accruing from production by unincorporated enterprises owned by households; it implicitly contains an element of remuneration for work done by the owner, or other members of the household, that cannot be separately identified from the return to the owner as entrepreneur but it excludes the operating surplus coming from owner-occupied dwellings.

### *Net*

The term “net” is a common means of referring to values after deducting consumption of fixed capital (generally used as in “net capital stock” or “net domestic product”); it should be noted, however, that the term “net” can be used in different contexts in the national accounts, such as “net income from abroad” which is the difference between two income flows.

### *Net income from abroad*

The difference between the total values of the primary incomes receivable from, and payable to, non-residents is often described as net income from abroad.

### *Net lending*

Net lending is the net amount a unit or a sector has available to finance, directly or indirectly, other units or other sectors; it is the balancing item in the capital account and is defined as: (Net saving plus capital transfers receivable minus capital transfers payable) minus (the value of acquisitions less disposals of non-financial assets, less consumption of fixed capital); negative net lending may also be described as “net borrowing”.

### *Net national disposable income*

Net national disposable income may be derived from net national income by adding all current transfers in cash or in kind receivable by resident institutional units from non-resident units and subtracting all current transfers in cash or in kind payable by resident institutional units to non-resident units.

### *Net national income*

The aggregate value of the balances of net primary incomes summed over all sectors is described as net national income.

### *Net saving*

Net saving is net disposable income less final consumption expenditure.

### *Net value added*

Net value added is the value of output less the values of both intermediate consumption and consumption of fixed capital.

### *Non-deductible VAT*

Non-deductible VAT is the VAT payable by a purchaser which is not deductible from his own VAT liability, if any.

### *Non-financial assets*

Non-financial assets are entities, over which ownership rights are enforced by institutional units, individually or collectively, and from which economic benefits may be derived by their owners by holding them, or using them over a period of time, that consist of tangible assets, both produced and non-produced, and most intangible assets for which no corresponding liabilities are recorded.

### *Non-produced assets*

Non-produced assets are non-financial assets that come into existence other than through processes of production.

### *Non-profit institutions serving households (NPISHs)*

Non-profit institutions serving households (NPISHs) consist of NPIs which are not financed and controlled by government and which provide goods or services to households free or at prices that are not economically significant.

### *Non-resident*

A unit is non-resident if its centre of economic interest is not in the domestic economic territory.

### *Operating surplus*

The operating surplus measures the surplus or deficit accruing from production before taking account of any interest, rent or similar charges payable on financial or tangible non-produced assets borrowed or rented by the

enterprise, or any interest, rent or similar receipts receivable on financial or tangible non-produced assets owned by the enterprise; (note: for unincorporated enterprises owned by households, this component is called “mixed income”).

#### *Other subsidies on production*

Other subsidies on production consist of subsidies, except subsidies on products, which resident enterprises may receive as a consequence of engaging in production (e.g., subsidies on payroll or workforce or subsidies to reduce pollution).

#### *Other subsidies on products*

Other subsidies on products consist of subsidies on goods or services produced as the outputs of resident enterprises that become payable as a result of the production, sale, transfer, leasing or delivery of those goods or services, or as a result of their use for own consumption or own capital formation; there are three broad categories: (1) subsidies on products used domestically, (2) losses of government trading organizations, and (3) subsidies to public corporations and quasi-corporations.

#### *Output*

Output consists of those goods or services that are produced within an establishment that become available for use outside that establishment, plus any goods and services produced for own final use.

#### *Producer’s price*

The producer’s price is the amount receivable by the producer from the purchaser for a unit of a good or service produced as output minus any VAT, or similar deductible tax, invoiced to the purchaser; it excludes any transport charges invoiced separately by the producer.

#### *Property income*

Property income is the income receivable by the owner of a financial asset or a tangible non-produced asset in return for providing funds to or putting the tangible non-produced asset at the disposal of, another institutional unit; it consists of interest, the distributed income of corporations (i.e., dividends and withdrawals from income of quasi-corporations), reinvested earnings on direct foreign investment, property income attributed to insurance policy holders, and rent.

#### *Purchaser’s price*

The purchaser’s price is the amount paid by the purchaser, excluding any deductible VAT or similar deductible tax, in order to take delivery of a unit of a good or service at the time and place required by the purchaser; the purchaser’s price of a good includes any transport charges paid separately by the purchaser to take delivery at the required time and place.

#### *Resident*

An institutional unit is resident in a country when it has a centre of economic interest in the economic territory of that country.

#### *Services*

Services are outputs produced to order and typically consist of changes in the conditions of the consuming units realized by the activities of producers at the demand of the consumers; by the time their production is completed they must have been provided to the consumers.

#### *Stocks*

Stocks are a position in, or holdings of, assets and liabilities at a point in time and the System records stocks in accounts, usually referred to as balance sheets, and tables at the beginning and end of the accounting period; stocks result from the accumulation of prior transactions and other flows, and they are changed by transactions and other flows in the period (note that stocks of goods are referred to as “inventories” in the System).

#### *Subsidies*

Subsidies are current unrequited payments that government units, including non-resident government units, make to enterprises on the basis of the levels of their production activities or the quantities or values of the goods or services which they produce, sell or import.

#### *Taxes and duties on imports*

Taxes and duties on imports, excluding VAT, consist of taxes on goods and services that become payable at the moment when the goods cross the national or customs frontiers of the economic territory or when the services are delivered by non-resident producers to resident institutional units.

#### *Taxes on production and imports*

Taxes on production consist of taxes payable on goods and services when they are produced, delivered, sold,

transferred or otherwise disposed of by their producers plus other taxes on production, consisting mainly of taxes on the ownership or use of land, buildings or other assets used in production or on the labour employed, or compensation of employees paid.

#### *Taxes on products*

Taxes on products, excluding VAT, import and export taxes, consist of taxes on goods and services that become payable as a result of the production, sale, transfer, leasing or delivery of those goods or services, or as a result of their use for own consumption or own capital formation.

#### *Transfer*

A transfer is a transaction in which one institutional unit provides a good, service or asset to another unit without receiving from the latter any good, service or asset in return as counterpart.

#### *Valuables*

Valuables are produced assets that are not used primarily for production or consumption, that are expected to appreciate or at least not to decline in real value, that do not deteriorate over time under normal conditions and that are acquired and held primarily as stores of value.

#### *Value added - gross*

Gross value added is the value of output less the value of intermediate consumption; it is a measure of the contribution to GDP made by an individual producer, industry or sector.

#### *Value added - net*

Net value added is the value of output less the values of both intermediate consumption and consumption of fixed capital.

#### *Value added tax (VAT)*

A value added tax (VAT) is a tax on products collected in stages by enterprises; it is a wide-ranging tax usually designed to cover most or all goods and services but producers are obliged to pay to government only the difference between the VAT on their sales and the VAT on their purchases for intermediate consumption or capital formation, while VAT is not usually charged on sales to non-residents (i.e., exports).

## II. COUNTRY TABLES

---

# Afghanistan

## Source

The National Accounts department of the National Statistic and Information Authority (NSIA) in Kabul, Afghanistan is responsible for maintaining the national accounts statistics for Afghanistan.

The following tables have been prepared by the National Statistic and Information Authority(NSIA) in Kabul, Afghanistan in reply to the United Nations national accounts questionnaire. The official estimates of national accounts are published in an annual yearbook by the National Statistic and Information Authority in Kabul, Afghanistan.

## General

The estimates shown in the following tables have been prepared in accordance with the United Nations System of National Accounts 2008 (2008 SNA), so far as the existing data would permit.

GDP by economic activity (in current and constant price) and GDP by expenditure have been compiled and published by the National Statistic and Information Authority(NSIA) in Kabul, Afghanistan. GDP is estimated through the production and Expenditure approaches. GDP excludes Poppy.

## Methodology:

### Expenditure Approach

Previously, GDP by expenditure at current prices is estimated using the indirect method of carrying over the GDP from the production side.

Household final consumption expenditure is imputed as a residual item, including changes in stock and data discrepancies. Since 2010-2011, the National Risk Vulnerability Assessment (NRVA) survey data (now called Afghanistan Living condition survey ALCS) was incorporated into the GDP by expenditure method.

## Albania

### Source

INSTAT is the most important agency for the collection of Albanian macroeconomic statistics. INSTAT undertakes most of the data collection and compilation, with the main exceptions being that balance of payments (BOP) and banking sector data are responsibility of the Bank of Albania (BOA), government statistics are collected by the Ministry of Finances (MOF) and data for agriculture statistics are collected by the Ministry of Agriculture and Food (MAF).

INSTAT's Directory of National Accounts is responsible for national accounts in compliance with 2008 SNA / ESA 2010. INSTAT has undertaken some expansion and recruitments upgrading National Accounts from a Sector to a Directorate. The current task of National account Directory consists of preparing Quarterly and Annual national accounts (mainly GDP by production and expenditure approach), institutional sector accounts, regional accounts and Supply and Use tables.

Statistical publications on National Accounts are available on the official website [www.instat.gov.al](http://www.instat.gov.al).

### General

The compliance with ESA 2010 and 2008 SNA compilation of GDP data by production and expenditure at current and constant price has been improved during the last years, partly due to two projects financed by the European Union and the International Monetary Fund. Both programmes (EU and IMF) aimed at providing a general improvement in the accuracy of annual and quarterly GDP estimation. The work is carried out in detail to the fullest extent possible, both to ensure proper reliability of the estimates and to provide a sufficiently detailed breakdown to reflect trends in the various sectors. Time series are available from 1996 onwards.

The most detailed description of the state of compiling the Albanian National Accounts could be found in the "Description of Sources and Methods for GNI" elaborated in the frame of IPA 2007 Multi-beneficiary Statistical Cooperation Programme (Project 5 National Accounts, service Contract No 19100.2007.003 – 2008.124) <http://www.instat.gov.al/en/themes/national-accounts.aspx>.

### Methodology:

#### Overview of GDP Compilation

Production and expenditures methods are used to estimate Gross Domestic Products in Albania.

The basic approaches can be summarized as follows:

- a) The production-side estimates are mainly based on grossing up the enterprise figures from the surveys using numbers of employments. Estimation of labour input by combining sources from the labour demand side (businesses) and demographic sources play an essential role in producing the estimate of the non observed economy.
- b) Domestic demand is estimated by combining data on the supply of products with data on expenditure obtained from the household consumption surveys, special surveys and businesses' balance sheets.
- c) The aggregates for general government, financial institutions and some public corporations are estimated from budgets or balance sheets and from other administrative sources.
- d) The main approach used to estimate output for agriculture is "price x quantity."
- e) A chain index system is used for valuations at constant prices for annual estimates and fixed based year for quarterly estimates.

## Expenditure Approach

The expenditure method of GDP measures final uses categories, i.e. consumption of final goods and services produced in the domestic economy, for final use, gross capital formation and net export of goods and services.

$GDP = \text{Final consumption expenditure} + \text{gross investment} + \text{export} - \text{import}$

Household final consumption expenditure consists of all expenditure of Albanian households on goods and services in their role of consumers. Estimates on household final consumption expenditure at current and constant (previous year) prices are prepared in 4 digit COICOP categories. The data refer to national concept (the consumption expenditure of resident households in Albania and abroad). The household budget survey (HBS) is the primary source to estimate HFCE.

Estimation of Household Final Consumption Expenditure (HFCE) for the years 2017 (final estimate) and 2018 (semifinal estimate) is done from a variety of sources, such as turnover data from the Short Term and Long term Enterprise Surveys, output data of different economic activities estimated by the Production Approach, commodity flow method, Household Budget Survey.

The basis for the estimates of HFCE for the years 2008 - 2018 is the estimate for 2007. The base estimation was done from the household budget survey of the year 2007 and output data taken from the production approach. The 2007 data for HFCE are rolled forward on the basis of annual development indicators such as turnover from the Short Term and Long term Enterprise Surveys or output calculated by the production approach. Indicators are chosen in order to be representative for items of final consumption of households to which they are applied.

Administrative data is used for the final consumption of Water, Sewerage Collection and Payments for Licenses, Permits made by households.

Estimation of durable goods for items like Purchase of Transport Vehicles, Equipment for the reception, recording and reproduction of sound and pictures, Major durables for outdoor recreation is done using the commodity flow method.

Items of FISIM, Financial Services, Insurance Services, Actual and Imputed Rent, Health and Education are estimated from output of these activities calculated by the Production Approach. The share of FISIM, Financial Services and Insurance Services belonging to households is included into the estimation of HFCE.

As a general rule, the relevant CPI item has been used as deflator. Government final consumption expenditure consists of the expenditure incurred by general government on both individual consumption goods and services and collective consumption services.

This expenditure is divided into:

- Government expenditure on individual consumption goods and services which comprises payments for non-market government services (education, health, social care, etc.) and market goods and services.
- Government expenditure on collective consumption services which consists of expenditure on administrative, economic and other non-market government services.

The present version of estimating Gross fixed capital formation utilizes mainly the supply side data. Agriculture Directory, INSTAT, supplies data on cultivated assets. For calculation of the investments in machinery and equipment the commodity flow method is used. This method uses data from foreign trade statistics (import and export of machinery and equipment). The domestic production is insignificant.

Construction is the dominant component of GFCF. It is used a variation of commodity flow method, whose value relies on the present version of SUT. GFCF has been deflated separately for each type of assets, using different indices, such as CCI, UVI, PPI, etc.

Changes in inventories have been estimated from stock levels and are calculated as a difference of stock values at annual average price level.

The value of exports and imports of goods and services is determined from the Albanian balance of payments data.

## **Production Approach**

There are two types of main data sources used for GDP estimations by production approach: statistical and administrative data.

The main statistical sources are Annual Structural Business Survey (SBS - for non-financial and non-agriculture enterprises), that cover the largest part of economic activities (Industry, Construction, Trade and Hotels, Transports, Telecommunications and one part of Services); Quarterly surveys on enterprises (Industry, Construction, Retail Trade, partial services ) carried out by INSTAT. Other surveys cover the activities of agriculture, forestry and fishing carried out by Ministry of Agriculture.

Administrative data sources are annual accounting statements of enterprises, which are collected by the General Directorate of Taxation; governmental data coming from Ministry of Finances, where data are related to the revenues and expenditures for all budgetary institutions.

Other data sources are: financial statements of monetary institutions that are collected by the Bank of Albania; financial statements of insurance undertakings collected by the Financial Supervision Authority; file of sales, collected by Tax Administration for the purpose of value added tax (VAT).

GDP data by industrial activity is compiled by using the European Classification of Economic Activities (NACE Rev 2) of Eurostat. The NACE classification used in Albania is the same as the original version of NACE classification of Eurostat.

The assessments of GDP include all present productions and services intended for the market as well as those produced for their own consumption and resident units operating in the territory defined as "economic" in Albania. GDP according to production approach is equal to sum of gross added values relevant to different kinds of activities, adding taxation and subtracting subsidies on products (not distributed to sectors or branches of a certain activity).

For market producers production is composed of market production and production for own final use. Thus, production equals the value of produced goods and services in the period.

Output at basic prices is equal to  $(1+2+3+4+5+6)$ :

1. Sales of goods and services on domestic market and export ,
2. Sales of trade goods on domestic market and export, Total turnover  $(1 + 2)$
3. Less: purchase value of sold goods for resale,
4. Additions to less withdrawal from inventories,
5. Value of goods for own final use,
6. Current transfers from general government, subsidies

Non-market output is estimated with cost method as sum of cost:

Output = Value added + Intermediate Consumption + Consumption of fix capital

Intermediate consumption at purchases price is equal to  $(1+2+3)$ :

1. Materials
2. Supplies and services
3. Other cost

The financial intermediation services indirectly measured, FISIM, have been calculated and allocated to sectors and users, in accordance with the FISIM regulation. The allocation of the part of FISIM as an intermediate consumption by activities has been done according to the structure of loans and for more detail level by gross output.

Taxes on production and imports in national accounts are divided into taxes on products and into other taxes on production. In Albania all taxes are not divided into two groups and are collectively estimated like taxes on products. Taxes on products are levied on goods and services in proportion to value or quantity and are paid when goods and services are produced, imported or purchased by the buyer. Like all taxes, taxes on products as well are compulsory and unrequited payments to institutions of general government.

The most important taxes on products (VAT, excise duties and all import duties and taxes) are estimated by direct data sources at cash value. Some adjustments are made to convert taxes from cash into an accrual basis.

Subsidies on products are current payments without compensation that governments make to enterprises on the basis of their production activity or the quantity or value of the goods and services they produce, sell or import.

The GDP at constant prices is measured from production side as the GVA by industry, i.e., the total sum of value added of all the economic activities at constant prices plus net indirect taxes on products at constant prices. Taking into account the availability of price / volume indices, different methods for deflation were used; single extrapolation of value added with the volume index of output and double deflation.

As regards the compilation of constant prices, chaining index is used which means the use of prices of the previous year. Also we have implemented the constant prices with the base year in order to support the estimation of quarterly GDP at constant prices which use the year 2010 for the base year index.

# Algeria

## Source

Response to the United Nations national accounts questionnaire from the Office National des Statistiques (ONS), Alger. Official estimates are published in "Comptes Economiques" by the Direction des Statistiques et de la Comptabilite Nationale, Secretariat d'Etat au Plan, and in the "Annuaire Statistique de L'Algerie" by ONS.

## General

The estimates shown in the following tables have been prepared in accordance with the United Nations System of National Accounts 1993 (1993 SNA) so far as the existing data would permit. When the scope and coverage of the estimates differ for conceptual or statistical reasons from the definitions and classifications recommended in the SNA, a footnote provides explanation.

## Andorra

### Source

The analysis and preparation of the National Accounts statistics in Andorra is undertaken by the National Statistical Office of Andorra "Departamento de Estadística" attached to the Ministry of the Presidency, Economy and Business of Andorra. The data displayed have been submitted directly to the United Nations Statistics Division through the UN National Accounts questionnaire.

The Department of Statistics disseminates and compiles official statistics. Official data estimates are published separately on the website: <http://www.estadistica.ad/serveiestudis/web/index.asp>

You can find all the official press releases by following these instructions:

<http://www.estadistica.ad/serveiestudis/web/index.asp> then click on "Productes i serveis" then on "Notes de premsa".

Methodology Notes:

<http://www.estadistica.ad/serveiestudis/web/fitxa.asp?id=100>

Classifications:

Classification of Economic Activities of the Principality of Andorra (CAEA)

<http://www.estadistica.ad/serveiestudis/web/fitxa.asp?id=51>

Classification of Individual Consumption by Purpose (CCIF)

<http://www.estadistica.ad/serveiestudis/web/fitxa.asp?id=10>

Database:

Gross Domestic Product (GDP) and Gross Value Added (GVA)

<http://www.estadistica.ad/serveiestudis/web/index.asp>

Then click on "Data Bank" and then on "Macroeconomic Aggregates" and finally on "Indirect PIB Estimation"

### General

### Methodology:

#### Expenditure Approach

Government final consumption expenditure:

Estimates of final consumption expenditure of government are calculated based on administrative records (State Budget Closeouts) based on the following national laws: "General Plan for Public Comptability 1999, General Llei de les finances públiques 1996 amb them seves modificacions and Llei Public Contractació 1999."

The national classification of COFOG is being developed at the highest level, currently approved at two digits.

Constant price estimates of government final consumption are based on deflating by the Consumer Price Index (CPI) due to lack of other deflators.

Household final consumption expenditure:

Estimates of consumption expenditure of households are obtained through the household budget survey, EPF. Private consumption expenditure at constant prices are deflated by the CPI. Regarding the nomenclature used, the classification of individual consumption by purpose was updated from 10 groups to 12 groups in 2010. By creating a break in the historical data, it has been decided in the questionnaire add 2 tabs called T-302 and T-302 bis. In addition, 2010 was taken as the base year. (Base year 2001 = 100 during 2004 to 2009 and from 2010 is 2010 = 100).

Goods and services account:

Estimates of exports and imports of goods are based on foreign trade statistics. The nomenclature used is current Combined Nomenclature (Combined Nomenclature 2017) which is equivalent to the Harmonized System up to the first 6 figures.

The constant values of imports and exports are obtained by deflating the current values with the CPI.

## Production Approach

The Gross Value Added of the economy is valued at basic prices and defined as the total productive activity of the resident units of production as measurable in monetary transactions. Since information enabling a direct computation of value added is not available for the majority of economic sectors, the Department of Statistics has made an estimation of this macroeconomic aggregate by means of an indirect method, which has been applied to all the economic sectors with exception of the Banking sector. Furthermore Industry (Energy production) and Telecommunications sectors are partially estimated using a direct method.

The indirect method obtains the VAB of each sector by multiplying the compensation of employees declared for each economic activity with the Andorran Social Security Fund "Caixa Andorrana de Seguretat Social (CASS)" with some coefficients "VAB" (Gross Value Added/Compensation of Employees at basic current prices) for each sector of activity. These coefficients are obtained through "EUROSTAT" website, the National Accounts estimate area EA.

The value added for the Banking, Energy production and Telecommunication sectors is estimated on the basis of balance sheets and profit-and-loss statements of the corporations that operate in Andorra.

The GDP value is computed by adding indirect taxes collected by the central administration to the Value Added.

Computation of integrated institutional sector accounts has not been implemented since currently only rudimentary information is available, i.e. on the government sector and the household sector but not on the other sectors.

GNI cannot be computed since data on transactions of the domestic sectors with the Rest of the World is not available.

# Angola

## Source

The national accounts data are produced by the Ministry of Planning of Angola and provided to the United Nations by the National Statistics Institute of Angola (INE - Angola).

## General

The estimates shown in the following tables have been prepared in accordance with the United Nations System of National Accounts 1993 (1993 SNA) so far as the existing data would permit. When the scope and coverage of the estimates differ for conceptual or statistical reasons from the definitions and classifications recommended in the SNA, a footnote provides explanation.

## Methodology:

## Overview of GDP Compilation

The Classification of Activities and Products (NAP) is structured according to the International Standard Industrial Classification (ISIC Rev. 3) and to the Central Product Classification (CPC Rev. 1), adapted to the national economic reality and subdivided in 33 Branches of Activity and 77 products.

Household final consumption expenditure is classified using the classification of Household Consumption in Goods and Services, according to the 1993 SNA.

Other details can be found at [www.ine.gov.ao/publications/Type of publications: Special publications / Publication Theme: National Accounts](http://www.ine.gov.ao/publications/Type%20of%20publications%3ASpecial%20publications%20Publication%20Theme%3ANational%20Accounts).

# Anguilla

## Source

Response to the United Nations national accounts questionnaire from the Anguilla Statistics Department, Ministry of Finance and Economic Development, Investment, Commerce and Tourism, Anguilla.

## General

The estimates shown in the following tables have been prepared in accordance with the United Nations System of National Accounts 1993 (1993 SNA) so far as the existing data would permit. When the scope and coverage of the estimates differ for conceptual or statistical reasons from the definitions and classifications recommended in the SNA, a footnote provides explanation.

## Antigua and Barbuda

### Source

Official statistics for the national accounts are compiled and disseminated through a collaborative effort between the Antigua and Barbuda Statistics Division and the Eastern Caribbean Central Bank (ECCB). Distribution of the national accounts data are done by ECCB via its website <http://www.eccb-centralbank.org/Statistics/index.asp>.

Basic information on national accounts is also available on request from the Antigua and Barbuda Statistics Division.

### General

The national accounts of Antigua and Barbuda are prepared according to the methodological principles of the System of National Accounts 1993 (1993 SNA), which is the international standard adopted in 1993 by the Commission of the European Communities, the International Monetary Fund, the Organization for Economic Cooperation and Development, the United Nations and the World Bank. Also businesses are classified based on the ISIC Rev. 3.1 classification.

The national accounts data for Antigua and Barbuda are compiled on an accrual basis, which is the main principle for reporting economic transactions according to the 1993 SNA. Data from our annual national accounts surveys, banking and financial statistics, administrative data and Balance of Payments statistics are used to compile the accounts. The revised estimates are then posted on ECCB's website by July.

The methodology for computing the national accounts statistics has been updated since our last report. In 2010, we rebased the GDP estimates. The base year is 2006.

The rebasing exercise has led to significant improvements in the revised GDP current and constant price series, arising from:

- (1) Broader data coverage by employing a wider range of data sources, including economic surveys and administrative data.
- (2) Conceptual changes notably the application of financial intermediation services indirectly measured (FISIM); and measurement of the output of owner-occupied housing.
- (3) Methodological changes for integrated output, intermediate consumption and value-added for all industries.

In compiling the GDP at constant prices, the single indicator method is mainly used, which is the direct extrapolation of base year value-added by a volume index of gross output. Detailed recompiled constant price estimates have been established, using relevant price indices to deflate current price values in order to generate volume estimates. These prices indices reflect the updated structure of the economy and relative prices of the new base year.

The industry classification for the national accounts has been revised and it is now in line with the ISIC Rev 3.1. The revision has resulted in a shift of some industries to a different estimation group. For example, health, education and social development formerly classified under government services is now separated and expanded to include private sector activities.

The financial year is the calendar year.

### Methodology:

#### Overview of GDP Compilation

The GDP is estimated by two methods:

- (1) Production
- (2) Expenditure

The production method is used to estimate GDP at the stage of production of goods and services. GDP is equal to the sum of gross value added of all forms of economic activity plus taxes, less subsidies on products. According to the final-use method, GDP is estimated as the sum of final consumption, gross accumulation and the balance of exports and imports of goods and services.

## **Expenditure Approach**

The Expenditure approach is used to estimate the gross domestic product according the categories of final use. This consist of estimates of expenditure of households final consumption, consumption expenditure of government, private non-profit services serving households on gross capital formation adjusted for imports and exports of goods and services.

Final consumption expenditure by households is derived by adding the direct purchases resident households make abroad and deducting the purchases non-resident households make in the domestic market.

Final consumption expenditure by the government consists of the purchases of goods and services and expenditure on compensation of employees, less the revenue received from sales (does not include fees and charges levied by governments for regulatory purposes).

Gross Fixed Capital Formation consists of additions to the assets of producers of tangible reproducible goods that have an expected lifetime of use of one year or more.

Changes in inventories is equal to the market value at the owning establishment of the physical change during a period of account, in stocks of materials, supplies, work-in-progress except on construction projects, finished products, livestock raised for slaughter and merchandise held by resident industries and in stock of strategic materials and emergency stocks of important products held by government services.

Exports and Imports of Goods and Non-Factor Services consists of the transactions in goods and services of the residents of a given country with the rest of the world, and covers merchandise, transportation, travel, insurance and other non-factor services, such as government transactions, various fees, rentals, royalties and gifts in kind.

## **Income Approach**

The income approach is used to estimate the value added for some industries, by aggregating compensation of employees, taxes less subsidies on production, operating surplus and consumption of fixed capital. Although this approach is most commonly used in the case of services sectors, it is not used to calculate GDP.

## **Production Approach**

The production approach is designed to evaluate the value of output. The value added is estimated by deducting intermediate consumption from the value of output.

The production approach is useful for estimation of value added for the commodity producing sectors, agriculture, livestock, forestry, fishing and mining.

Output measures the value of the goods and services produced within an establishment that becomes available for use outside that establishment. There are three types of output:

- (i) Market output
- (ii) Output for own final use
- (iii) Other non-market output

Intermediate Consumption consists of non-durable goods and services purchased by producers and used up as inputs in the process of production. It does not include goods and services produced within the establishment and

fed back as inputs into production within the same establishment.

Gross Value Added is a measure of each producer's contribution to GDP. It is a measure of the increased or newly created value generated by the production process.

## Argentina

### Source

The preparation of national accounts statistics in Argentina is undertaken by Dirección Nacional de Cuentas Nacionales (DNCN) INDEC. The information is available in the INDEC's website <http://www.indec.gob.ar>. Argentina compiles and disseminates quarterly GDP estimates 70-80 days after the end of the reference quarter.

The quarterly national accounts of Argentina presents: a) data at current and constant (2004) prices of gross output and value added at basic prices for 16 economic activities, GDP and supply and demand at purchasers' prices, b) data at current and constant (2004) prices of value added at basic prices for 51 economic activities and c) at current and constant (2004) prices of gross output at basic prices for 51 economic activities for the definitive and provisory years. For the 2004 base year, the Income Generation Account was compiled for the 16 economic activities ([http://www.indec.gob.ar/uploads/informesdeprensa/pib\\_anual\\_06\\_16.pdf](http://www.indec.gob.ar/uploads/informesdeprensa/pib_anual_06_16.pdf)) and the Supply and Use table for 271 products and 163 activity branches.

The methodology is described in "Cuentas Nacionales. Metodología de estimación. Base 2004 y serie a precios constantes y corrientes. N° 21"[National Accounts. Estimation Methodology. 2004 Base at Current and Constant Prices]. The publication is available in the INDEC's website [http://www.indec.gob.ar/ftp/cuadros/economia/metodologia\\_21\\_cuentas\\_nacionales.pdf](http://www.indec.gob.ar/ftp/cuadros/economia/metodologia_21_cuentas_nacionales.pdf).

Update of sources and methods for the 2015-2018 review of the Quarterly National Accounts: [https://www.indec.gob.ar/ftp/cuadros/economia/pib\\_revision\\_2016\\_2018.pdf](https://www.indec.gob.ar/ftp/cuadros/economia/pib_revision_2016_2018.pdf)

### General

The 2004 Base has mostly adopted the recommendations, definitions and concepts of the SNA 2008. However, the changes introduced by the SNA 2008 compared to the SNA 1993 were only adopted in cases where the availability of statistical and administrative sources of information allowed it.

Gross output by industry is valued at basic prices and Intermediate consumption is valued at purchaser's prices, excluding the deductible part of the value-added tax. Taxes on imports, value-added tax and taxes on products less subsidies are added to the value added to obtain GDP at market prices. Household consumption expenditures are valued at purchaser's prices and consumption expenditure of general government is valued at cost.

Classification systems: The list of sectors that produce goods and services (source activity sector) reflects the breakdown used by INDEC (National Statistics and Census Institute) in the 2004 National Economic Census (CNE2004) which are based on the relevant international recommendations contained in the International Standard Industrial Classification, Revision 3 (ISIC Rev. 3). Data are released for the following activities: Agriculture, hunting and forestry; Fishing; Mining and quarrying; Manufacturing; Electricity, gas and water supply; Construction; Wholesale and retail trade; repair of motor vehicles, motorcycles and personal and household goods; Hotels and restaurants; Transport, storage and communications; Financial intermediation; Real estate, renting and business activities; Public administration, defense and compulsory social security; Education; Health and social work; Other community, social and personal service activities and Domestic services. The product classification is based in the Central Product Classification 1.1 (CPC 1.1). Foreign trade statistics are classified using the Common Nomenclature of the Mercosur (NCM) which are based on Harmonized System.

An advance release calendar which is updated at the beginning of each year to show the precise release dates for the next twelve months is disseminated in English and in Spanish at the website <http://www.indec.gob.ar/calendario.asp>.

The precise date of the next release of the quarterly data is also given in each issue of the quarterly publication Informe técnico: Cuentas Nacionales. Informe de avance del nivel de actividad. [Status Report on Activity Level.]

## Methodology:

### Overview of GDP Compilation

Gross domestic product is estimated mainly through the production approach.

### Expenditure Approach

Consumption expenditure by households - Goods and services:

Source: Sales to the internal market - Production plus imports minus net export retention minus changes in stocks.

Method: Flow of goods.

Consumption expenditure by households - Imports and exports of travels:

Source: International Tourism Survey - Balance of Payments.

Consumption expenditure by General Government:

Source: Budgetary execution of the national, provincial and municipal governments.

Method: Production is calculated by addition of costs and income of sales is deduced.

Gross fixed capital formation - Transport equipment; Office machinery and hardware; Radio, television and communication equipment; Other machinery and equipment n.e.c.:

Source: Sales to the internal market - Production plus imports minus net export retention minus changes in stocks.

Method: Flow of goods.

Construction:

Source: Construction Activity Indicator (INDEC); Construction Cost Index (INDEC).

Method: The base year is calculated by addition of costs + surplus margin.

Changes in inventories: Changes in stocks of industrial products: Current stock information at the end of each period is provided by the INDEC Monthly Industrial Survey. By using the price indices of the goods-producing branches, the stock at constant and current prices is calculated without capital gain at the end of each period. From these calculations the changes in stocks are obtained for each period at current and constant prices.

Exports of goods:

Source: Foreign Trade.

Method: Deflation of values in dollars and translation to pesos by base year exchange rate at current prices; translation of dollars into current pesos by exchange rate.

Exports of services:

Source: Balance of Payments.

Method: Deflation and translation to pesos for volume estimate; exchange rate for estimate at current prices.

Imports of goods:

Source: Foreign Trade.

Method: Deflation of values in dollars and translation to pesos by base year exchange rate at current prices; translation of dollars into current pesos by exchange rate.

Imports of services:

Source: Balance of Payments.

Method: Deflation and translation to pesos for volume estimate; exchange rate for estimate at current prices.

## Income Approach

For the 2004 base year, the estimates of compensation of employees are based on employment and wages information (sources: Social Security System and Permanent Household Survey). Operating surplus is obtained as a residual.

## Production Approach

01 Crop and animal production, hunting and related service activities:

Crop production:

Volumes: Ministry of Agro Industry. Valuation of crops in process.

Prices: Bolsa de Cereales de Buenos Aires (Buenos Aires Grain Exchange).

Farming of animals: Valuation of commercialization per destination/purpose.

Source: Oficina Nacional de Control Comercial Agropecuario (ONCCA, National Office for Agricultural Trade Control), el Servicio Nacional de Sanidad y Calidad Agroalimentaria (SENASA, National Sanitation and Agri-Food Quality Service).

02 Forestry and logging:

Source: Dirección de Estadística Forestal de la Secretaría de Medio Ambiente (Forestry Statistics Division of the Environmental Secretariat), businesses and business chambers. Quantities and prices for each period.

03 Fishing and aquaculture:

Quantities: Dirección de Estadística de la Subsecretaría de Pesca del Ministerio de Agroindustria (Statistics Division of the Fishing Under Secretariat of the Ministry of Agro Industry).

Prices: Cooperativa de Mar del Plata de Pesca (COMARPES, Mar del Plata Fishing Cooperative).

05 Mining of coal and lignite:

Volumes: Sistema Integrado Previsional Argentino (SIPA, Argentine Integrated Social Security System).

Indicators for Physical Volume Index: Number of job vacancies in the activity.

Prices: Sistema Integrado Previsional Argentino (SIPA, Argentine Integrated Social Security System).

Indicators for the Price Index: Salary cost of the activity.

06 Extraction of crude petroleum and natural gas:

Volumes, Sources: Ministerio de Energía y Minería (MinEM, Ministry of Energy and Mining).

Indicators for Physical Volume Index: Cubic meters (m<sup>3</sup>) of petroleum; Cubic meters (m<sup>3</sup>) of gas.

Prices, Sources: Ministerio de Energía y Minería (MinEM, Ministry of Energy and Mining); National Institute of Statistics and Censuses (INDEC).

Indicators for Price Index: Price of crude petroleum; Prices of natural gas.

07 Mining of metal ores:

Volumes: Sistema Integrado Previsional Argentino (SIPA, Argentine Integrated Social Security System).

Indicators for Physical Volume Index: Number of job vacancies in the activity.

Prices: Export Prices.

Indicators for Price Index: Export prices of each product of the Activity (silver, gold and copper).

Value Index = National Survey of Large Businesses (ENGE for its Spanish acronym).

08 Other mining and quarrying:

Volumes: Sistema Integrado Previsional Argentino (SIPA, Argentine Integrated Social Security System).

Indicators for Physical Volume Index: Number of job vacancies in the activity.

Prices: Sistema Integrado Previsional Argentino (SIPA, Argentine Integrated Social Security System).

Indicators for the Price Index: Salary cost of the activity.

09 Mining support service activities:

Volumes, Sources: Ministerio de Energía y Minería (MinEM, Ministry of Energy and Mining).

Indicators for Physical Volume Index: Drilled meters.

Prices, Sources: National Institute of Statistics and Censuses (INDEC).

Indicators for the Price Index: ICC (Construction Cost Index).

Value index = National Survey of Large Businesses (ENGE).

#### 10 Manufacture of food products:

Volumes, Sources: Ministry of Agro Industry, Federación Argentina de Industrias Molineras (FAIM, Argentine Milling Industry Federation), Centro Azucarero Argentino (Argentine Sugar Center), National Directorate of National Accounts (DNCN - Agricultural sector) and EIM (Monthly Industrial Survey – INDEC).

Indicators for Physical Value Index: Produced quantities of meats, oils, dairy products, sugar, other food products and current production deflated from the branch.

Prices, Sources: Internal Basic Wholesale Prices (IPIB), alternative Consumer Price Index (CPI) and Foreign Trade price indices.

#### 11 Manufacture of beverages:

Volumes, Sources: Cámara Argentina de la Industria de Bebidas Sin Alcohol (CADIBSA, Argentine Chamber of Non-Alcoholic Beverage Industry), Federación de la Industria Licorista Argentina (FILA, Argentine Liquor Industry Federation), Instituto Nacional de Vitivinicultura (INV, National Viniculture Institute - Ministry of Agro Industry) y EIM (Monthly Industrial Estimator).

Indicators for Physical Volume Index: Sold quantities of non-alcoholic beverages, produced quantities of spirits, produced and fractionated wines and current production deflated from the branch.

Prices, Sources: IPIB (Internal Basic Wholesale Price Index), CPI and Foreign Trade price indices.

#### 12 Manufacture of tobacco products:

Volumes, Sources: Ministerio de Agroindustria (Ministry of Agro Industry), NDNA (National Directorate of National Accounts) and Monthly Industrial Estimator (EMI-INDEC).

Indicators for Physical Volume Index: Quantity of processed tobacco leaves and cigarette production.

Prices, Sources: IPIB (Internal Basic Wholesale Price Index), CPI and Foreign Trade price indices.

#### 13 Manufacture of textiles:

Volumes, Sources: NDNA and EIM.

Indicators for Physical Volume Index: Ginned cotton and current production deflated from the branch.

Prices, Sources: IPIB (Internal Basic Wholesale Price Index), CPI and Foreign Trade price indices.

#### 14 Manufacture of wearing apparel:

Volumes, Sources: EIM.

Indicators for Physical Volume Index: Current production deflated from the branch.

Prices, Sources: IPIB (Internal Basic Wholesale Price Index), CPI and Foreign Trade price indices.

#### 15 Manufacture of leather and related products:

Volumes, Sources: EIM.

Indicators for Physical Volume Index: Current production deflated from the branch.

Prices, Sources: IPIB (Internal Basic Wholesale Price Index), CPI and Foreign Trade price indices.

#### 16 Manufacture of wood and of products of wood and cork, except furniture; manufacture of articles of straw and plaiting materials:

Volumes, Sources: EIM.

Indicators for Physical Volume Index: Current production deflated from the branch.

Prices, Sources: IPIB, ICC INDEC, IIC CABA (Construction Input index of the Autonomous City of Buenos Aires) and Foreign Trade price indices.

#### 17 Manufacture of paper and paper products:

Volumes, Sources: Asociación de Fabricantes de Celulosa y Papel (Pulp and Paper Manufacturers Association)

and EIM.

Indicators of Physical Volume Index: Produced quantities of pulp and paper and current production deflated from the branch.

Prices, Sources: IPIB (Internal Basic Wholesale Price Index), CPI and Foreign Trade price indices.

18 Printing and reproduction of recorded media:

Volumes, Sources: EIM.

Indicators for Physical Volume Index: Current production deflated from the branch.

Prices, Sources: IPIB (Internal Basic Wholesale Price Index), CPI and Foreign Trade price indices.

19 Manufacture of coke and refined petroleum products:

Volumes, Source: Ministerio de Energía y Minería (MinEM, Ministry of Energy and Mining).

Indicators for Physical Volume Index: Produced quantities of fuels and other derivatives of petroleum.

Prices, Sources: IPIB, wholesale prices of the Ministry of Energy and Mining and Foreign Trade price indices.

20 Manufacture of chemicals and chemical products:

Volumes, Sources: Instituto Petroquímico Argentino (IPA, Argentine Petrochemical Institute), INDEC Industrial Products Statistics, Cámara de Sanidad Agropecuaria y Fertilizantes (CASAFE, Agricultural Sanitation and Fertilizers Chamber), Monthly Industrial Estimate (EMI - INDEC), EIM (Monthly Industrial Survey) and INDEC Foreign Trade Databases.

Indicators for Physical Volume Index: produced quantities of compressed and liquid gases, basic chemical materials, nitrogen fertilizers and compounds, primary plastics and synthetic rubber, pesticides and chemical products for agricultural use, paints, soaps and cleaning preparations and current production deflated from the branch.

Prices, Sources: IPIB, alternative CPI, Foreign Trade price indices and Agrochemical Prices - Agricultural sector NDNA INDEC, IIC City.

21 Manufacture of basic pharmaceutical products and pharmaceutical preparations:

Volumes, Sources: INDEC Report on Pharmaceutical Industry.

Indicators for Physical Volume Index: Current deflated invoicing of medications for human use and pharmaceutical products.

Prices, Sources: IPIB (Internal Basic Wholesale Price Index), alternative CPI and Foreign Trade price indices.

22 Manufacture of rubber and plastic products:

Volumes, Sources: Instituto Petroquímico Argentino (IPA, Argentine Petrochemical Institute), INDEC Industrial Products Statistics, Monthly Industrial Estimate (EMI - INDEC), EIM (Monthly Industrial Survey) and INDEC Foreign Trade Databases.

Indicators for Physical Volume Index: produced quantities of rubber products and plastic products and current production deflated from the branch.

Prices, Sources: IPIB (Internal Basic Wholesale Price Index), alternative CPI and Foreign Trade price indices.

23 Manufacture of other non-metallic mineral products:

Volumes, Sources: Vidriería Argentina S.A. (Glass Company) and Pilkington Group Limited, Asociación de fabricantes de cemento Portland (Portland Association of cement manufacturers), EIM.

Indicators for Physical Volume Index: Produced quantities of flat glass and cement and current production deflated from the branch.

Prices, Sources: IPIB, alternative CPI, IIC City, ICC INDEC and Foreign Trade price indices.

24 Manufacture of basic metals:

Volumes, Sources: Cámara Argentina del Acero (Argentine Steel Chamber), INDEC Foreign Trade Databases and ALUAR Aluminio Argentino SAIC (Argentine Aluminum Company).

Indicators for Physical Volume Index: Produced quantities of iron, steel and primary aluminum.

Prices, Sources: IPIB, alternative CPI, IIC City, ICC INDEC, ENGE Price Index and Foreign Trade price indices.

25 Manufacture of fabricated metal product, except machinery and equipment:

Volumes, Sources: EIM.

Indicators for Physical Volume Index: Current production deflated from the branch.

Prices, Sources: IPIB, alternative CPI, IIC City, ICC INDEC and Foreign Trade price indices.

26 Manufacture of computer, electronic and optical products:

Volumes, Sources: Industrial Products Statistics (EPI) and EIM.

Indicators for Physical Volume Index: Produced quantities of television and radio transmitters and apparatus for line telephony and radio and television receivers, sound or video recording or reproducing apparatus and current production deflated from the branch.

Prices, Sources: IPIB and alternative CPI.

27 Manufacture of electrical equipment:

Volumes, Sources: Industrial Products Statistics (EPI) and EIM.

Indicators for Physical Volume Index: Produced quantities of domestic appliances and current production deflated from the branch.

Prices, Sources: IPIB and alternative CPI.

28 Manufacture of machinery and equipment n.e.c:

Volumes, Sources: INDEC Report on Agricultural Machinery Industry, Argentine Chamber of Agricultural Machinery Manufacturers and EIM.

Indicators for Physical Volume Index: Produced quantities of tractors and agricultural machinery, deflated sales of agricultural implements and current deflated production from the branch.

Prices, Sources: IPIB.

29 Manufacture of motor vehicles, trailers and semi-trailers:

Volumes, Sources: Automobile Factories Association, IVECO, Mercedes Benz and EIM.

Indicators of Physical Volume Index: Produced quantities of motor vehicles and current production deflated from the branch.

Prices, Sources: IPIB and alternative CPI.

30 Manufacture of other transport equipment:

Volumes, Sources: EIM.

Indicators for Physical Volume Index: Current production deflated from the branch.

Prices, Sources: IPIB and alternative CPI.

31 Manufacture of furniture:

Volumes, Sources: EIM.

Indicators for Physical Volume Index: Current production deflated from the branch.

Prices, Sources: IPIB and alternative CPI.

32 Other manufacturing:

Volumes, Sources: EIM.

Indicators for Physical Volume Index: Current production deflated from the branch.

Prices, Sources: IPIB and alternative CPI.

33 Repair and installation of machinery and equipment:

Volumes, Sources: EIM.

Indicators for Physical Volume Index: Current production deflated from the goods-producing branches.

Prices, Sources: IPIB, alternative CPI and Price Index of the goods-producing branches.

35 Electricity, gas, steam and air conditioning supply:

Volumes, Sources: CAMMESA (Wholesale Electric Market Management Company), Secretariat of Energy, Self-producers Survey (INDEC). ENARGAS (National Gas Regulating Agency), Cía MEGA.

Indicators for Physical Volume Index: MWh Generation, self-production and co-generation, demand of the Ministry of Energy and Mining. MWh distributed to final users. m3 of gas distributed, sales of products from separation of Gas derived from Natural Gas.

Prices, Sources: CAMMESA, companies from the sector.

36 Water collection, treatment and supply:

Volumes, Sources: panel of companies of the sector.

Indicators for Physical Volume Index: m3 delivered to the network.

Prices, Sources: AFIP (Argentine Federal Administration of Public Revenue) revenue.

37 Sewerage: Sewerage activity is included in 36.

38 Waste collection, treatment and supply:

Volumes, Sources: CEAMSE (State Agency for Ecological Coordination in the Metropolitan Area).

Indicators for Physical Volume Index: Waste tonnage.

Prices, Sources: AFIP sales.

41 Construction of buildings

Volumes, Sources: SIPA (Argentine Integrated Social Security System) and ISAC (Synthetic Indicator of Construction Activity)-INDEC. ICC-Materials (Construction Cost Index)-INDEC.

Indicators for Physical Volume Index: Number of job vacancies in the activity – SIPA. ISAC-INDEC.

Prices, Sources: ICC-Materials-INDEC.

42 Civil engineering

Volumes, Sources: SIPA (Argentine Integrated Social Security System) and ISAC (Synthetic Indicator of Construction Activity)-INDEC. ICC-Materials (Construction Cost Index)-INDEC.

Indicators for Physical Volume Index: Number of job vacancies in the activity – SIPA. ISAC-INDEC.

Prices, Sources: ICC-Materials-INDEC.

43 Specialised construction activities

Sources: SIPA (Argentine Integrated Social Security System) and ISAC (Synthetic Indicator of Construction Activity)-INDEC. ICC-Materials (Construction Cost Index)-INDEC.

Indicators for Physical Volume Index: Number of job vacancies in the activity – SIPA. ISAC-INDEC.

Prices: ICC-Materials-INDEC.

45 Wholesale and retail trade and repair of motor vehicles and motorcycles:

Volumes: Vehicles is calculated by current goods together with the wholesale (46) and retail (47) trade.

Vehicle repair: Estimate of vehicle fleet from DNRPA (National Directorate of Automotive Property Records) and ADEFA (Association of Automotive Manufacturers).

Prices for vehicle repairs: alternative CPI.

46 Wholesale trade, except of motor vehicles and motorcycles:

Volumes: Current goods on VMI from Gross Production Value of the Agro Sectors, Mining and Industry, net exports, and imports (INDEC Foreign Trade data). Includes vehicle sales according to ADEFA data.

Prices: Implicit Gross Production Value prices of the involved sectors and foreign trade prices, according to the current goods method.

47 Retail trade, except of motor vehicles and motorcycles:

Volumes: Current goods on VMI from Gross Production Value of the Agro Sectors, Mining and Industry, net exports, and imports (INDEC Foreign Trade data). Includes vehicle sales according to ADEFA data. Repair of personal and household goods: according to demand calculation.

Prices: Implicit Gross Production Value prices of the involved sectors and foreign trade prices, according to the current goods method. Repair of personal and household goods: Alternative CPI.

49 Land transport; transport via pipelines:

Sources: National Commission for Regulation of Transport, NDNA Statistics, Ministry of Energy and Mining.  
Indicators for Physical Volume Index: Transported passengers and km traveled (automotive urban and via railway). Transported passengers (underground and interurban via railway), m3 of crude petroleum transported, m3 of natural gas delivered via pipelines, Demand indices (Taxis and town cars).  
Indicators for Current goods: Industrial Sector Gross Production Value, Mining Sector Gross Production Value, Foreign Trade Statistics.  
Prices, Sources: Alternative CPI, Revenue from urban and interurban automotive passenger transport, Underground services price series, metropolitan trains.

50 Water transport:

Sources: Statistics of the NDNA, Directorate of Passenger Transport of the Province of Buenos Aires; Statistics of the NDIA (National Directorate of International Accounts), Ministry of Agro Industry.  
Indicators for Current goods: Foreign Trade Statistics.  
Indicators for Physical Volume Index: Sea and inland water passengers.  
Prices: Sea transport Price Index, Revenue from passenger transport services.

51 Air transport:

Sources: Public Services Report (INDEC), Aerolineas Argentinas (Argentine Airlines) and Austral (Airline).  
Indicators for Physical Volume Index: Tonnage and passengers transported by air: tons.km and passengers.km by Aerolineas Argentinas and Austral.  
Prices, Sources: Alternative CPI

52 Warehousing and support activities for transportation:

Sources: Public Services Report (INDEC); Statistics of the NDNA; General Directorate of Statistics and Censuses of the Autonomous City of Buenos Aires.  
Indicators for Physical Volume Index: Vehicle flow of concession roads and motorways; animal production; automotive fleet; Foreign Trade Statistics.  
Prices: CEDOL (Business Chamber of Logistics Operators), revenue from toll services in concession roads and motorways, price indices implicit in the involved sectors.

53 Postal and courier activities:

Source: National Communications Agency.  
Methods: Extrapolation by indices of volume and value of service sales.

55 Accommodation:

Source: Hotel Occupancy Survey and Argentine Federal Administration of Public Revenue (AFIP).  
Method: Physical Volume Index and Sales Value.

56 Food and beverage service activities:

Volumes: Elasticity of demand according to the ENGHo'04 (INDEC), production account of the Manufacturing Industry (NDNA) and Real Services account (NDNA and NDIA).  
Prices: CPI-GBA (INDEC), Wage Index (INDEC) and average income according to the EPH (Permanent Household Survey, INDEC) and SIPA (ANSES). Annual sales registered by AFIP.

58 Publishing activities:

Source: Argentine Federal Administration of Public Revenue (AFIP). Asociación Argentina de Publicidad (AAP, Argentine Advertising Association), Cámara Argentina de Agencias de Medios (CAAM, Argentine Chamber of Media Agencies).  
Methods: Extrapolation by indices of weighted volume and value of service sales.

59 Motion picture, video and television programme production, sound recording and music publishing activities:

Source: Department of Study and Research of the Argentina Film Industry Union (DESICA); information on gross advertising investment in television, radio and cable television provided by IBOPE.

Method: Extrapolation and production costs.

60 Programming and broadcasting activities:

Source: Argentine Chamber of Media Agencies (CAAM) and Argentine Integrated Social Security System.

Method: Extrapolation and indexation.

61 Telecommunications:

Source: National Communications Agency / INDEC (Internet survey) / Cablevisión balance.

Method: Extrapolation and indexation.

62 Computer programming, consultancy and related activities:

Sources: Argentine Integrated Social Security System (SIPA) - AFIP - Argentine Federal Administration of Public Revenue.

Method: Extrapolation and indexation. The Gross Production Value and Gross Value Added (GVA) are extrapolated with the number of job posts and indexed with AFIP sales.

63 Information service activities:

Sources: Argentine Integrated Social Security System (SIPA) - AFIP - Argentine Federal Administration of Public Revenue.

Method: Extrapolation and indexation. The Gross Production Value and Gross Value Added (GVA) are extrapolated with the number of job posts and indexed with AFIP sales.

64 Financial service activities, except insurance and pension funding:

Sources: BCRA (Central Bank of the Republic of Argentina).

Indicators for Physical Volume Index: Current production deflated from the branch, alternative CPI, Physical Volume Index of loans and deposits.

Prices: Current information, monthly balances.

65 Insurance, reinsurance and pension funding, except compulsory social security:

Sources: Superintendency of National Insurance (SSN), Argentine Integrated Social Security System (SIPA).

Indicators for Physical Volume Index: Quantity of policies and premium production deflated by alternative CPI.

Number of job vacancies in the activity.

Prices: Current information, quarterly balances. Index of value of the payroll of the branch.

66 Activities auxiliary to financial service and insurance activities:

Sources: Superintendency of National Insurance, National Securities Commission.

Volumes: Current production of the branch deflated by alternative CPI.

Prices: Current information, quarterly balances sample. Commission value index.

68 Real estate activities:

Home ownership: series of stock of houses, construction permit releases (INDEC) and cancellations.

Housing market activities: Public Notaries Association of the City of Buenos Aires and the Province of Buenos Aires.

69 Legal and accounting activities:

Sources: Public Notaries Association of CABA and Public Notaries Association of the Province of Buenos Aires and legalizations by the Professional Council of Economic Sciences of CABA. AFIP - Argentine Federal Administration of Public Revenue.

Method: Extrapolation and indexation.

71 Architectural and engineering activities; technical testing and analysis:

Source: Physical Volume Index produced with Construction activity levels. AFIP - Argentine Federal Administration of Public Revenue.

Method: Extrapolation and indexation.

72 Scientific research and development:

Sources: Employment rate according to SIPA.

Method: Extrapolation and indexation.

74 Veterinary activities:

Sources: SIPA - Argentine Integrated Social Security System - AFIP - Argentine Federal Administration of Public Revenue.

Volume Index: Jobs – SIPA.

Value Index: Sales reported - AFIP.

77 Rental and leasing activities:

Sources: SIPA - Argentine Integrated Social Security System - AFIP - Argentine Federal Administration of Public Revenue. NDNA Data.

Volume Index: Jobs - SIPA, construction activity, transport activity.

Value Index: Sales reported – AFIP.

78 Employment activities:

Sources: Surveys of temporary employment companies.

Method: Extrapolation and indexation

79 Travel agency, tour operator, reservation service and related activities:

Sources: NDNA Statistics.

Volumes: Gross Production Volume at current prices of Hotel and Air Passenger Transport services.

Prices: Index of prices implicit in the involved sectors.

80 Security and investigation activities:

Sources: Argentine Integrated Social Security System (SIPA) - AFIP - Argentine Federal Administration of Public Revenue.

Method: Extrapolation and indexation. The Gross Production Value and Gross Value Added (GVA) are extrapolated with the number of job posts and indexed with AFIP sales.

81 Services to buildings and landscape activities:

Sources: Argentine Integrated Social Security System (SIPA) - AFIP - Argentine Federal Administration of Public Revenue.

Method: Extrapolation and indexation. The Gross Production Value and Gross Value Added (GVA) are extrapolated with the number of job posts and indexed with AFIP sales.

84 Public administration and defense; compulsory social security:

Sources: Budgetary execution of the national, provincial and municipal governments.

Method: Production is calculated by addition of costs.

85 Education:

Private Education:

Sources: Sistema Integrado Provisional Argentino (SIPA, Argentine Integrated Social Security System).

Method: Extrapolation and change in value.

Public Education:

Source: Budgetary execution of the national, provincial and municipal governments.

Method: Production is calculated by addition of costs.

86 Human health activities:

Public Health:

Source: Budgetary execution of the national, provincial and municipal governments.

Method: production is calculated by addition of costs.

Private Health:

Sources: SIPA - Argentine Integrated Social Security System - AFIP - Argentine Federal Administration of Public Revenue.

Volume Index: Jobs – SIPA.

Value Index: Sales reported – AFIP.

87 Residential care activities:

Sources: SIPA - Argentine Integrated Social Security System - AFIP - Argentine Federal Administration of Public Revenue.

Volume Index: Jobs – SIPA.

Value Index: Sales reported - AFIP

88 Social work activities without accommodation:

Sources: SIPA - Argentine Integrated Social Security System - AFIP - Argentine Federal Administration of Public Revenue.

Volume Index: Jobs – SIPA.

Value Index: Sales reported – AFIP.

90 Creative, arts and entertainment activities:

Sources: SIPA / INCAA (Instituto Nacional de Cine y Artes Audiovisuales, National Institute of Film and Visual Arts) / AADET (Asociación Argentina de Empresarios Teatrales, Argentine Association of Theater Businesspeople).

Method: Extrapolation and change in value.

91 Libraries, archives, museums and other cultural services:

Sources: SIPA.

Method: Extrapolation and change in value.

92 Gambling and betting activities:

Sources: National Lottery and Provincial Institute of Lotteries and Casinos of the Province of Buenos Aires.

Method: Extrapolation and change in value.

93 Sports activities and amusement and recreation activities:

Sources: SIPA.

Method: Extrapolation and change in value.

94 Activities of membership organizations:

Sources: SIPA.

Method: sum of costs.

95 Repair of computers and personal and household goods:

Volumes: Demand Elasticity according to ENGHo'04.

Prices: CPI-GBA (INDEC), Wage Index (INDEC) and average income according to the EPH (Permanent Household Survey, INDEC) and SIPA (ANSES).

96 Other personal service activities:

Volumes: Demand Elasticity according to ENGHo'04.

Prices: CPI-GBA (INDEC), Wage Index (INDEC) and average income according to the EPH (Permanent Household Survey, INDEC) and SIPA (ANSES).

97 Activities of households as employers of domestic personnel:

Source: Socio-demographic and registration system of household staff. Extrapolation and change in value.

## Armenia

### Source

The Macroeconomic Indicators and National Accounts Division of the Republic of Armenia's Statistical Committee is responsible for compiling and disseminating official national accounts statistics. National accounts are disseminated in the following publications: Socio-Economic Situation of the Republic of Armenia (monthly publication); Statistical Yearbook of Armenia (annual publication); and National Accounts of Armenia (annual publication), as well as on the National Data Summary Page (NSDP) requested by SDDS (<http://docs.armstat.am/nsdp/>) and on SC RA website as time series in spreadsheet files (<http://www.armstat.am/en/?nid=263>). Detailed information is available under "publications" on the website of the Statistical Committee of the Republic of Armenia: (<http://www.armstat.am/en/>).

### General

Since 2014 SC RA has implemented methodological changes in National accounts Statistics, switching from "The System of National Accounts 1993" (1993 SNA) to "The System of National Accounts 2008". The national accounts of Armenia are compiled in line with the key concepts, categories and notions of the methodological bases for the System of National Accounts 2008 (2008 SNA).

According to the 2008 SNA data are available for the period of 2012-2018 years. Revision of more back data is intended, which is one of stage of the implementation process of 2008 SNA.

In order to inform the Armenian national accounts data users about implementation of 2008 SNA the SC RA announced about "The Introduction of the System of National Accounts 2008 (2008 SNA) in Armenia's National accounts" in a special press release on 13 December 2013 (<http://armstat.am/en/?nid=53&id=372>). Within the release were reflected the more significant changes which lead to the changes of GDP volume, real growth and structure, as well as the SNA's main indicators.

Schedules for the release of statistical publications (data) are contained in the annual statistical work programmes approved by the State Statistical Council of the Republic of Armenia. The annual programme is approved within one month following the adoption of the State budget by the National Assembly of the Republic of Armenia. Schedules with GDP revision policy for the release of statistical publications are also available in the website of NSS RA:

- Gross Domestic Product Revision Timetable [http://armstat.am/file/Timetable/Timetable\\_2018-en.pdf](http://armstat.am/file/Timetable/Timetable_2018-en.pdf)
- Pre-release Calendar of Statistical Indicators for 2018 <http://armstat.am/file/calendar/Kalendar-en.pdf#page=18>
- Calendar of statistical publications <http://armstat.am/file/calendar/2018-i%20Oracuic-en.pdf>
- Advance Release Calendar by SDDS <http://docs.armstat.am/nsdp/arc/>

Starting from 2018 quarterly GDP data by production and expenditure approaches are published in 45/46 days after the reporting quarter and annual national accounts are published in 16 months after the reporting year. GDP in constant prices were reported in different ways: With 1998 BY, 2005 BY and in prices of the same period of the previous year. Since 2011 quarterly GDP data in constant prices are reported in average prices of the previous year. Quarterly Data in average prices of the previous year are available for 2009-2016. The national accounts aggregates in constant prices are reported in the form of chain volume measures.

In the Armenian national accounts the calendar year is used as the financial year.

### Methodology:

#### Overview of GDP Compilation

GDP is compiled by three methods:

- (1) Production approach

- (2) Income generation approach
- (3) Expenditure or use approach

The production approach is the basic method used for GDP compilation. For the production approach the GDP compilation is based on various sources, although primarily on the surveys of the Statistical committee of the Republic of Armenia.

The Statistical committee conducts monthly (discrete), quarterly and annual surveys of organizations engaged in all types of economic activities apart from agriculture. In the case of agriculture, information are collected a) through annual reports from legal persons, individual entrepreneurs and organizations engaged in agricultural activities b) through sample survey on a monthly basis (186 communities, 12090 farmholdings).

Data sources are also supplemented using data from surveys of households (ILCS). Other sources include reporting data from the Ministry of Finance for general government services and tax revenues and subsidies. Data from Central Bank and commercial banks are used for compilation of financial sector data. NACE Rev. 2 classification was implemented since 2008 for GDP compilation by production approach.

For the income approach, data are obtained from labour-force surveys conducted by the Statistical Committee; reports from the Ministry of Finance on taxes and subsidies; and the quarterly and annual financial reports of companies submitted to the Statistical Committee.

For the expenditure approach on categories of expenditure data are compiled on the basis of data from surveys of households; surveys of trade and paid services; the resources-uses balance used for agricultural product consumption; reports from the Ministry of Finance on general government consumption expenditure; company's reports on capital formation and inventory changes; and BoP data from Central bank, data of one off survey on NPISHs.

## **Expenditure Approach**

GDP from use side is defined as the sum of final consumption expenditures, gross capital formation, and net export of goods and services. It shows how the households, government units and non-profit institutions serving households distribute their disposable incomes among the final consumption and savings.

Final-consumption expenditure is calculated using data from households budget surveys (ILCS), retail trade turnover, which is adjusted to account for the amount of purchases in the informal market; expenditure on paid services; production for own consumption; and consumption expenditure by general government and non-profit institutions. Data are adjusted on the basis of household surveys and, in part, on the need for an overall balance between GDP calculated using the production approach and the final-use method. Assessments in the previous year's average prices are made through deflation of final consumption and capital formation in current prices using the appropriate price indexes.

Fixed capital formation is mainly calculated on the basis of data from statistical reports on capital investments; expenditures for major repairs; expenditures on geological prospecting work; increases in the value of livestock; expenditures for computer software and databases; expenditures on literary and artistic original productions; and also includes State budget expenditures for the acquisition of non-expendable equipment and other items. Balance-of-payment data are also used.

A change in inventories is calculated on the basis of data from the statistical reports of enterprises. A change in the value of inventories is defined as the difference between the goods entering inventories and those being withdrawn from them. The value of the goods as a result of price fluctuations during the period that they are held in inventories — i.e. the influence of price fluctuations (holding gains) — is excluded from the value of changes in inventories.

Data on export and import of goods and services are derived from balance-of-payments data, which are compiled

on the basis of data from customs statistics, with an adjustment made for “shuttle trade”. Quarterly data in average annual prices of the previous year are obtained by deflating, using the quarterly price index (by component). Until 1999, the base year was 1996. For the years 2000-2006 the base year was 1998. For the years 2005-2011 the base year was 2005. Since 2011 the base year is the previous year. Quarterly data at constant prices are calculated with chain volume measures.

## **Income Approach**

GDP from income generation side is one of the three approaches to calculate GDP in the SNA framework. However it's not an independent calculation, as, according to the accepted methodology, not all income indicators are derived by direct calculation, some of them are calculated through the balancing method. The income approach is used for the calculation of GDP on an annual basis only. Remuneration of employees includes pay and employers' social-security contributions. These are recorded on the basis of the accrued amounts. Pay includes all forms of remuneration, in cash or in kind, irrespective of the sources of funding.

Taxes on production and import include taxes on goods and imports and other taxes on production. Subsidies are current non-refundable and non-returnable payments that the State makes to enterprises on the basis of the production, sale or import of goods and services. Gross operating surplus and gross mixed income include the portion of the value added that is retained by the manufacturers after deducting expenditures. Gross mixed income is also included from the household sector.

## **Production Approach**

Production account records transactions directly linked with the production process. In this account the value added is defined, which is the basis for calculating the Gross Domestic Product.

Intermediate consumption consists of the value of the goods and services, which are either transformed or used up by the production process in the reporting period. Intermediate consumption excludes consumption of fixed capital. Intermediate consumption separately covers financial intermediation services indirectly measured.

Gross value added is calculated as the value of output of goods and services less the value of intermediate consumption by economic activities. The term «Gross» shows that the indicator includes the value of fixed capital consumed in the process of production.

GDP at market prices from production side is defined as the sum of gross value added (at basic prices) produced in the economy, and net taxes (less subsidies) on products and import.

Value added at basic prices is an output indicator, which is defined as the value of output of goods and services less the value of intermediate consumption and doesn't include taxes on product, but includes subsidies on product.

The output data submitted are adjusted for “non-recorded” activities including illegal activity on drugs. Estimations of NOE are based on data of production output, Household budget surveys, Informal sector survey, the number of persons employed and the number of persons engaged in production derived from regular statistical reporting and labour-force surveys. Indirect macroeconomic methods are also employed using a combined information base.

Data are valued at constant prices using the double deflation method. These prices are based on volume, price and extrapolation indexes. Until 1999, the base year was 1996. For the years 2000-2006 the base year was 1998. For the years 2005-2011 the base year was 2005. Since 2011 the base year is previous year. Quarterly data at constant prices are calculated with chain volume measures.

## **Overview of the Compilation of the Integrated Economic Accounts**

Integrated economic accounts cover all transactions defined in the 2008 SNA within the entire territory of the Republic of Armenia. A number of statistical indicators are evaluated related to the “non-recorded” part of the

economy and the hidden economy. The non-observed economy is estimated to account for 23.2 per cent of GDP in 2016. Institutional units are economic units that are capable of owning assets and entering into commitments in their own right. They are able to engage in all kinds of transactions and are central to decisions taken in all aspects of economic life. Institutional units are grouped into main institutional sectors on the basis of their principal functions, behaviour and objectives. A sector is a collection of institutional units which are similar from the point of view of their functions and financing sources.

The five sectors of the national economy are as follows: non-financial corporations; financial corporations; general government; non-profit institutions serving households; and households. Non-financial corporations are institutional units whose principal activity is the production of market goods and non-financial services; Financial corporations are institutional units which are principally engaged in financial intermediation or in auxiliary financial activities; General government refers to institutional units which, in addition to fulfilling their political responsibilities and their role of economic regulation, produce principally non-market services for individual or collective consumption and redistribute income and wealth; Non-profit institutions serving households are legal entities which are principally engaged in the production of non-market services for households. Their status does not permit them to be a source of income, profit or other financial gain for the units that establish them. The main resources of these institutions are voluntary contributions from households; a household is a small group of persons who share the same living accommodation, who pool some, or all, of their income and wealth and who consume certain types of goods and services collectively, mainly housing and food. Units included in the households sector participate in production with their labour force and acquire goods and services in the market.

Furthermore, households are sometimes owners of small unincorporated enterprises (farms, family restaurants, shops, etc.). These unincorporated enterprises produce goods and services for sale in a market, but also sometimes partly for their own consumption. The financial outcome of the activity of unincorporated establishments is the mixed income, including both the surplus elements and the remaining remuneration of work. In order to reflect the interlinkages of the above-mentioned sectors with other countries, a nominal "rest of the world" sector was established, consisting of all non-resident institutional units that enter into transactions with residents of the national economy.

## Aruba

### Source

Reply to the United Nations national accounts questionnaire from the Central Bureau of Statistics, Aruba.

### General

The estimates shown in the following tables have been prepared in accordance with the System of National Accounts 2008 (2008 SNA) so far as the existing data would permit. When the scope and coverage of the estimates differ for conceptual or statistical reasons from the definitions and classifications recommended in the SNA, a footnote provides explanation.

## Australia

### Source

Reply to the National Accounts Questionnaire from the Australian Bureau of Statistics, Canberra. The official estimates are published in 'Australian system of national accounts', ABS, catalogue 5204.0.

### General

As from December 2009, national accounts estimates are compiled according to the 2008 SNA ('System of National Accounts 2008', Commission of the European Communities-Eurostat, International Monetary Fund, Organisation for Economic Co-operation and Development, United Nations and World Bank, 2009).

Detailed information about the implementation of the 2008 SNA in Australian national accounts could be found in ABS website:

<http://www.abs.gov.au/ausstats/abs@.nsf/mf/5310.0.55.002>

All the data refer to fiscal years beginning on the 1st July of the year indicated.

The financial intermediation services indirectly measured (FISIM) are allocated to industries and institutional sectors.

Original chain constant price estimates for main aggregates are referenced to fiscal year 2017-2018.

### Methodology:

#### Overview of GDP Compilation

Gross domestic product (GDP) is estimated in Australia using three approaches: the income approach (I), the expenditure approach (E) and the production approach (P). A description of each approach is provided below.

While each of the I, E and P measures should, conceptually, provide the same estimate of GDP, if the three measures are compiled independently using different data sources, then different estimates result. From 1994-95, up to the year preceding the latest complete financial year, balanced supply (production) and use (demand) tables by commodity are compiled. The annual GDP (I, E and P) estimates are then benchmarked to these balanced supply-use estimates, ensuring the annual estimates using the I, E and P approaches are identical for the years for which supply and use tables are available.

Prior to 1994-95, and for quarterly estimates for all years, the estimates using each approach are based on independent sources, and there are differences between the income, expenditure and production estimates. Nevertheless, for these periods, a single estimate of GDP has been compiled. For the latest fiscal year, only a GDP by expenditure value is estimated. In chain volume terms, GDP is derived by averaging the chain volume estimates obtained from each of the three independent approaches. The current price estimate is obtained by redeflating the average chain volume estimate by the implicit price deflator derived from the expenditure-based estimates.

As a result of these methods, there is no statistical discrepancy for annual estimates from 1994-95 up to the year prior to the latest complete financial year. For years prior to 1994-95, and for quarterly estimates for all years, statistical discrepancies exist between estimates based on the I, E and P approaches and the single estimate of GDP, in both current prices and volume terms.

#### Expenditure Approach

Government final consumption expenditure and public gross fixed capital formation are estimated from the accounting records of the government sector. Private final consumption expenditure on goods is mainly derived

from information collected in retail censuses (held approximately every six years) as well as data on production, imports and exports, and motor vehicle registrations. The results of a monthly survey of retail sales are used to interpolate between census benchmarks and to extrapolate for the period since the last retail census. Benchmarks for dwellings rent are derived from population census data collected every five years. The consumer price index is used in conjunction with a perpetual inventory model of the stock of dwellings to interpolate between census year estimates and extrapolate from the most recent census. Estimates of expenditure on other services are based mainly on revenue or earnings data. Increase in inventories is based on book value levels of inventories reported in ABS economic censuses and surveys, taxation statistics and ABS Quarterly Business Indicator Surveys (QBIS) (less the inventory valuation adjustment). Estimates of private gross fixed capital expenditure are obtained from a quarterly collection of building and engineering construction statistics and from a quarterly survey of new capital expenditure by private businesses on plant and equipment. Exports and imports of goods are estimated from customs data while exports and imports of services are derived from transportation survey data and from data obtained as a by-product of the administration of foreign exchange transactions. Chain volume measures are derived quarterly with annual estimates obtained by summing the quarterly series. Government consumption expenditures are deflated by composite wage rate and material price indexes. Substantial use is made of consumer price indexes in the deflation of private final consumption expenditure. Estimates of gross fixed capital expenditure are deflated using (output) building price indexes for building; composite wage and material price indexes for engineering construction; producer price indexes and import price indexes for equipment; and quantity revaluation for real estate transfer expenses. For exports and imports, considerable use is made of the quantity revaluation technique with the remainder deflated using price indexes. Increase in inventories volume estimates are derived using detailed price indexes to revalue book value levels.

### **Income Approach**

The components of indirect taxes (net) are estimated from government accounting records. Estimates of gross operating surplus are mainly based on annual ABS Economic Activity Survey (EAS) data supplemented by taxation statistics. The annual estimates are then moved on a quarterly basis using an indicator series [Company gross operating profits] from the ABS Quarterly QBIS. Gross mixed income (GMI), which denotes the income from unincorporated enterprises, is derived separately for the farm and non-farm sectors. Annual GMI for the non-farm sector is derived from taxation statistics supplemented with information from ABS and other sources and moved quarterly using a range of data relating to turnover (e.g. retail sales and building activity). GMI of farm unincorporated enterprises is derived using a range of ABS and non-ABS sources. Estimates of the consumption of fixed capital are derived at current replacement cost using the perpetual inventory method. Compensation of employees data for the private sector are based on ABS Economic Activity Survey data, moved quarterly using QBIS. Compensation of employees data for the public sector are currently based on a survey of employment and earnings.

### **Production Approach**

GDP using the production approach is derived as the sum of gross value added for each industry, at basic prices, plus taxes less subsidies on products. The current price estimates of gross value added by industry are only produced annually. For years prior to 1994-95, the estimates were derived for the most part using the income approach only. For years from 1994-95, they have been derived in a supply-use framework and are in balance with the expenditure estimates on an annual basis for all years prior to the latest complete financial year. The annual benchmark estimates are based on ABS EAS data supplemented by taxation statistics.

Quarterly chain volume measures of gross value added by industry are derived by interpolating and extrapolating annual benchmarks using quarterly indicator series. Both the annual benchmarks and the quarterly indicators are calculated as chain volume measures. From 1994-95, the annual benchmarks are obtained from supply and use (S-U) tables compiled in the prices of the previous year.

Quarterly chain volume indicators of gross value added in the Australian national accounts are derived using three different methods:

- the output indicator method (the most common method)

- double deflation (used for Agriculture estimates) and
- the input indicator method

The method selected to obtain chain volume measures for a particular industry depends on the data available in respect of that industry.

In the Australian National Accounts, the QBIS data are used extensively for those industries for which the output indicator method is used. A range of other data is also used such as output volume data for certain industries, other ABS survey data (e.g. Retail Turnover Survey, Building Activity Survey, etc.), public finance data and other indicator data. More information can be provided on request.

## Austria

### Source

The preparation of annual national accounts statistics in Austria is undertaken by the Directorate of Macroeconomic Statistics at STATISTICS AUSTRIA, the Austrian National Statistical Office located in Vienna. The official data are published in "Österreichs volkseinkommen", Beiträge zur Österreichischen Statistik. The data provided to UNSD is received through the Organisation for Economic Cooperation and Development (OECD), Paris.

Detailed methodology of the Austrian national accounts could be found in Statistics Austria website: [http://www.statistik.at/web\\_en/dynamic/statistics/national\\_accounts/078511](http://www.statistik.at/web_en/dynamic/statistics/national_accounts/078511).

### General

From September 2014, these national accounts estimates are compiled according to the 2008 SNA ('System of National Accounts 2008', Commission of the European Communities-Eurostat, International Monetary Fund, Organisation for Economic Co-operation and Development, United Nations and World Bank, 2009).

The financial intermediation services indirectly measured (FISIM) are allocated to industries and institutional sectors.

Original chain constant price estimates are referenced to 2015.

### Methodology:

#### Overview of GDP Compilation

The compilation of Austria's national accounts is primarily based on the production approach. A statistical discrepancy is therefore shown on the demand side in nominal terms. In addition, an income approach is calculated with gross operating surplus as a residual.

GDP is primarily calculated as the sum of gross value added of all industries--classified according to NACE REV. 2-- plus taxes and less subsidies on products (which are not allocated to sectors and industries). Unintended growth by natural processes without human contribution like increase in fish or wood stock is not production. GDP comprises all activities within the ESA 2010 production boundary. Estimates for hidden but legal economic activities are included as long as they contribute to GDP. Illegal activities are integrated according to the production definitions of ESA 2010 (drug production and trafficking, prostitution, smuggling of cigarettes).

Calculations cover the whole area within Austria's national border (including the free trade zones of Jungholz and Kleines Walsertal) as well as Austrian embassies in foreign countries.

Annual figures of final consumption expenditure are classified by COICOP (private households), COPNI(NPISH) and COFOG (general government). The supply side is broken down by NACE Rev. 2 for annual as well as quarterly figures. For quarterly releases, gross fixed capital formation is classified by seven types according to ESA2010 (advance releases cover only the sum). For regular dissemination, quarterly national accounts exports and imports are separated by goods and services (again, advance estimates provide only a sum of them). Outside the national accounting framework, monthly export and import data--classified by SITC Rev. 3 -- is available too.

#### Expenditure Approach

Private household consumption expenditure is partially derived from retail trade statistics, statistics on non-retail traded private consumption (like energy consumption), tax revenue statistics, etc. Additionally, some services like owner-occupied rents are imputed. NPISH-consumption is mainly derived from enterprise and association reports. Government consumption calculations are based on government records. Import and export values are derived

from monthly INTRASTAT and EXTRASTAT statistics as well as from the balance of payment statistics. Gross fixed capital formation figures are compiled using various data sources such as investment surveys, administrative data and commodity flows.

Adjustments for underreporting and imputing for rents take place on a regular basis. Quarterly figures are calculated by econometric means with statistics like retail sales, exports and imports, production statistics, tax revenues and administrative data as input.

Deflation is done using CPI data, whole sale prices, energy statistics, wage increase data (for government consumption) etc.

Primary data, used for compilation of the expenditure side, is tested for plausibility in the same way as for production, with emphasis on tax records.

### **Income Approach**

Estimates of compensation of employees are based on contributions paid by employers to government funds and wage statistics, as well as structural business statistics. Direct information is available on compensation of government employees. Operating surplus/mixed income is basically derived as a residual item. Further information is gained from income tax statistics for unincorporated enterprises, independent professions and property. Corporate balance sheets and tax statistics are used for undistributed profits of corporations: for agriculture and forestry income is derived from the production account. In the case of the public sector, data are obtained from the accounting records of public bodies. Depreciation estimates of stocks are obtained either by using the perpetual inventory concept or, in some instances, are extrapolated by net output at constant prices and inflated by national accounts' price index for fixed capital formation. Indirect taxes and subsidies are obtained directly from the records of the various governments.

### **Production Approach**

The data for annual national accounts is from an annual business census covering NACE rev.2 industries B to J and L to N. Annual sample surveys covers 21% of all Austrian enterprises and represents more than 90% of total enterprise turnover. The surveys deliver data on output and intermediate consumption. Additionally, enterprise reports of large firms are used. Quarterly national accounts are compiled on a monthly 5 percent sample survey of total enterprises, which only provides output figures. Results for agriculture are derived from various special statistics on output volumes and prices. Administrative records are used for the calculation of production in the government sector.

Source data are supplemented by estimates concerning unit-non-response, underreporting and hidden economic activity. Missing observations are either completed by forecasting or other econometric methods. In order to calculate value added from output figures on a quarterly basis, input/output ratios are derived. In some cases this is not done explicitly but instead by econometric methods. For some service sectors, quarterly employment figures are used for extrapolation of value added.

Price adjustment for annual statistics is done by deflating separately output and intermediary consumption (double deflation), for quarterly figures by econometric methods implicitly.

Data used in the production approach are tested for plausibility with tax records or benchmark figures for individual branches (for annual calculations). For quarterly accounts, input data is tested for plausibility by benchmark quotas (like productivity) as well as statistical techniques.

## Azerbaijan

### Source

The preparation of national accounts statistics in Azerbaijan is undertaken by the National Accounts and Macroeconomic Indicators Statistics Department at State Statistical Committee of Azerbaijan Republic, located in Baku. Data on national accounts statistics are published annually in "National Accounts of the Azerbaijan Republic" (Azeri and English), Statistical Yearbook - "Statistical Indicators of the Azerbaijan Republic" (Azeri and English), "Azerbaijan in figures" (Azeri and English), on the internet (<http://www.stat.gov.az>); quarterly in "Statistical review" (Azeri), monthly in "Socio-Economic Development" (Azeri) and Press-releases (Azeri).

### General

The "System of National Accounts, 1993" (1993 SNA) provides the framework for compiling national accounts. The definitions and concepts of national accounts for the aggregates and balancing items are derived from 1993 SNA.

The methodological issues of compilation of national accounts statistics have been published in "Methodology on statistics" (2002, 2003), "Compilation of national accounts by institutional sectors and definition of its indicators" (2005), "Estimation of GDP on base of supply and use tables data" (2011) and etc.

The recording period for annual accounts is the calendar year.

The previous year and 2005 serve as the base year for data series at constant prices.

### Methodology:

#### Overview of GDP Compilation

GDP data are currently published using the national Classification of Types of Economic Activities based on NACE. GDP cover all resident units, including producers engaged in unrecorded activities. The contribution of the informal sector to GDP is estimated on the basis of budget and special surveys, and added to annual GDP by production activities. Gross domestic product is estimated mainly through the production approach. Expenditure and income approach are also compiled.

Following the 1993 SNA all non-financial transactions are covered. The entire territory of the Azerbaijan Republic (excluding occupied territories) is covered. Special sample surveys are conducted to estimate unrecorded production not included in the regular national accounts compilation. For this purpose, the data from household budget surveys, retail trade turnover and transport, balance methods, the Ministry of Taxes, Customs Committee and other supervisory agencies are used.

Production output is valued at basic prices. Intermediate and final consumption are recorded at market prices. Gross fixed capital formation is recorded at market prices. Non-market production is valued on the basis of outlays. Imports and exports of goods and services are valued on an FOB basis. The monetary unit is Manat. Input-output tables were compiled for 2001, 2006 and 2011.

#### Expenditure Approach

Basic data sources for estimation of GDP through expenditure approach are: household Budget Surveys and surveys of retail trade; reports on incomes and expenditures of nonprofit institutions serving households; annual budget report provided by MOF; reports on the balance sheets of enterprises and data on imports of capital (investment) goods, and on investment expenditures of government; reports on customs payments, and import and export of goods and services provided by the customs authorities; balance of payments data provided by the Central Bank of Azerbaijan (CBA).

Consumption expenditure of households is estimated from household surveys and goods turnover in retail trade. Final consumption of nonprofit institutions serving households consists of expenditures on services provided to households free of charge. Final consumption of government is estimated from current expenditure reported in the annual state budget.

Fixed capital formation is estimated from the expenditure of enterprises and organizations on capital investments, geological prospecting operations, etc. Changes in inventories include changes in inventories of raw materials and supplies, goods for resale, finished products, and unfinished production. Net exports (less imports of goods and services) are derived from customs data that are adjusted by the CBA according to the BOP methodology and include also the adjustments on "shuttle" trade.

Estimation of data in prices of the previous year: The data in current prices are deflated by the appropriate components of the available price indices. Final consumption of households is deflated by the CPI. Government final consumption is extrapolated using employment data. Imports and exports of goods and services are deflated using value indices for imports and exports. Gross fixed capital formation is deflated using mainly the price index for capital investment.

## **Production Approach**

Basic data sources for estimation of GDP through production approach are monthly, quarterly and annual reports on production and expenses submitted to the SSC by enterprises. In general, monthly reports cover large enterprises, while the annual surveys include small enterprises as well. The sources include quarterly household surveys, monthly and annual employment and wage surveys, annual banking statistics provided by the Central Bank of the Azerbaijan Republic (CBA), the budget report of the Ministry of Finance (MOF), reports on customs payments and taxes of the MOF.

Additionally, the following activity-specific sources are used:

**Agriculture:** Production data in physical terms and data on prices of agricultural products. For most farms the first set of data is submitted by reporting farms, and the second set of data is obtained from price surveys of farms. In the case of privately operated farms, the data on farm productivity and yield per acre are collected in surveys of these farms, and the prices data are collected separately from surveys. Agricultural output is estimated as the product of output of crops and animal husbandry and corresponding prices. Output includes the change in the value of unfinished production in crop farming and animal husbandry.

**Industry:** Monthly, quarterly and annual report forms on production and expenses submitted by enterprises on a monthly and annual basis. Estimates of production and production expenses of units engaged in individual entrepreneurial activity are compiled from household surveys. Industrial output is compiled from the data on total production as reported by enterprises, excluding intra-factory turnover, i.e. the value of finished and semi-finished goods used within the enterprise.

**Construction:** Monthly, quarterly and annual reports of construction companies on completed construction and capital investments, and annual income and expenditure statements. Large enterprises report on a monthly basis; small enterprises on a quarterly basis; and all enterprises are covered on an annual basis. Gross output of construction is determined from the purchasers' side, and includes the value of construction and installation work, operational drilling, and other capital work. Individual construction activity is estimated using records of city and local governments relating to new and additional construction.

**Transportation:** Monthly, quarterly and annual reports of transport companies on freight and passenger turnover, and reports on income and costs. Gross output of transportation includes output of enterprises in rail transport, highway transport, waterway transport, aviation, small (individual) transporters.

**Communications:** Reports on the (monetary value of) services provided and costs submitted by postal service enterprises and electrical communications services, and reports on the (monetary value of) services provided

submitted by small enterprises.

Trade and public food service: Reports on turnover submitted by enterprises engaged in retail trade and public food services, and data of other economic units engaged in this activity. Special quarterly surveys of city markets and trade fairs. Output of retail and wholesale trade is determined as the difference between the value of sales and the purchase value of goods.

Finance, credit, insurance: Quarterly and annual statistical reports of the banking sector, the annual report of the Central Bank, and quarterly and annual reports of insurance companies.

General government: Monthly reports on revenue and expenditure of the government (MOF) and consolidated annual report on the budget, quarterly and annual reports of Oil Fund and State Social Security Fund.

Health care, education, social sphere, and other services: Annual surveys of enterprises engaged in providing these services, and data on current expenditure from the monthly and annual budget reports of MOF.

Output of non-market services is determined from the cost side, mainly from expenditures reported in the annual budget, and includes consumption of fixed capital. Output of market services of self-supporting enterprises and state-supported enterprises, including services provided by private individuals, is determined from sales volume.

Estimation of data in prices of the previous year: In the case of commodity sectors, volume indices are used to derive the estimates at constant prices of the previous year. For services, extrapolation is done using employment indices.

## **Overview of the Compilation of the Integrated Economic Accounts**

The national accounts of Azerbaijan are in line with the 1993 SNA. It concerns all main definitions, including identification of boundaries of production activity, assets and liabilities. The following accounts are compiled: Goods and services; Production; Generation of the income; Distributions of primary incomes; Secondary distribution of income; Use of disposable income; and Accumulation accounts. There is a statistical discrepancy between balancing item of the Capital account and corresponding item of the Financial account.

The accounts are compiled for the following institutional sectors:

- Non-financial corporations;
- Financial corporations;
- General government;
- Households;
- Non-profit institutions serving households.

The account "Rest of the world" is also compiled for covering transactions with non-resident units. The "Rest of the world" accounts are compiled on the basis of BOP data produced by the Central Bank of Azerbaijan. Institutional units are included in different sectors of economy in accordance with their functions and 1993 SNA requirements.

The following data sources are used for the compilation of the integrated accounts in Azerbaijan: the data of the statistical reports of the enterprises and non-profit institutions; the data of the Central Bank and bank statistics; balance of payment; the report of the Ministry of the Finance on execution of the state budget, data from the Ministry of Taxes; the data of the State Social Protection Fund, State Oil Fund; the data from the households budgets survey, and also special sample surveys conducted in the different branches of economy.

The interrelation of indicators in the accounts of each institutional sector is made in the integrated table reflecting main intersectoral flows in economy.

## Bahamas

### Source

Department of Statistics within the Ministry of Finance is responsible for the compilation of the official national accounts statistics. Dissemination of the official national accounts statistics is in (a) Annual Report "The National Accounts Report" published during June/July of the year and (b) Online: [www.statistics.bahamas.gov.bs](http://www.statistics.bahamas.gov.bs) and [www.centralbankbahamas.com](http://www.centralbankbahamas.com) (after October of the year).

### General

The latest estimates shown in the following tables are considered to be prepared in accordance with the concepts and definitions of the System of National Accounts 2008 (2008 SNA), based on the response to a conceptual questionnaire and/or other available information. Previous estimates were prepared in accordance with the United Nations System of National Accounts 1993 (1993 SNA). A footnote provides explanation when the scope and coverage of the estimates differ for conceptual or statistical reasons from the definitions and classifications recommended in the SNA.

### Methodology:

#### Overview of GDP Compilation

The national accounts are primarily compiled by the production approach. It is also calculated by the expenditure approach. FISIM is distributed across the industries as recommended by 2008 SNA. Output is recorded at basic prices.

#### Supply & Use Tables:

The Department of Statistics created a Supply & Use Table for 2012. Hence 2012 will become the new benchmark for the constant prices series. In an effort to ensure that the original economic relationships remain correctly reflected in the accounts the period 1997 to 2012 will be extrapolated using the new benchmark. This will provide a series of years which allow for calculation of a GDP growth rate and in-depth analysis by local and international organizations using the original changes at the industry levels. The revised historical series are scheduled to be released in the spring of 2018 with when the annual National Accounts Report is release.

The National Accounts Section periodically undertakes revisions to the data especially when a new SUT has been produced.

The updated benchmark data that facilitated the production of the 2012 SUT tables were:

1. The revised data from the Tourist Expenditure Survey which provides detailed information on tourist expenditures.
2. The Department of Statistics 2012 Household Expenditure Survey - which encompasses information on a wide range of household expenditure commodities.
3. The Department of Statistics Annual Business Establishment Survey.
4. The incorporation of aggregated Value Added Tax (VAT) data.
5. Industrial Classification: The Industry grouping has been changed from International Standard Industrial Classification Revision 3 to International Standard Industrial Classification Revision 4 and has been given the appropriate names as suggested by ISIC (Rev. 4)

The Department of Statistics will be creating a Tourism Satellite Account for The Bahamas utilizing the 2012 SUT which will gave insight into consumption and revenue patterns of the Tourism sector.

#### Expenditure Approach

Government Final Consumption Expenditure is derived from an an analysis of the Estimates of Revenue and Expenditure produced by the Ministry of Finance

Private final consumption expenditure of residents has many constituent elements. The methodology utilizes the proportion of household expenditure of commodities based on the Household Expenditure Survey (HES) of 2012.

The change in stocks data were obtained from records of public corporations and the establishment survey in retail and wholesale trade. Since, at the moment, no knowledge of inventory accounting practices exists, nor are there any price indices measuring the change in the value of inventories, these estimates must be considered rough approximations to the true change in the value of inventories. Presently no data exist in areas other than outlined above.

The values of residential building construction and of other construction which were based on the construction industry are now calculated using the commodity flow approach. Purchases of machinery and equipment were derived from detailed import data adjusted for custom duties and mark-ups. The value of exports and imports of goods and services are anchored to the balance of trade and balance of payment data estimated by the Department of Statistics and the Central Bank of the Bahamas respectively. The tourism data is based on Ministry of Tourism figures for expenditure by tourists.

### **Production Approach**

Using the SUT 2012 each industry's Revenue at the four (4) digit level ISIC (Rev. 4) is calculated based on the change in those ISICs as shown in the Business Establishment Survey Estimates. The growth levels are then extrapolated to make the current price industry for each industry's revenue. Additionally, with the assistance of the SUT 2012 the use of specific commodities by each industry is used to form the benchmark for Intermediate Consumption (IC) of each industry. The IC of each industry is then extrapolated using the annual changes in expenditure of each industry as provided by the Business Establishment Survey Estimates. The IC of each industry is then subtracted from the matching Revenue resulting in the GVA for each industry. Total GVA of the Industries results in Total GDP at Basic Prices. Consequently, the GDP at purchaser prices is the final figure after the inclusion of taxes less subsidies.

Important inputs into the GDP by Production Approach are the Business Establishment Survey. Unless otherwise stated, the data is derived from questionnaires asking for such detail as gross revenue, salaries and wages, expenses incurred in the business' operation. Most industries are covered by the Department of Statistics (DOS) "Business Establishment Survey". Data in the agriculture and fishing industries were constructed from information obtained from the Departments of Fisheries and Agriculture. The financial industry data is obtained mainly from the Insurance Commission and from the Central Bank of the Bahamas who normally gather financial data from the insurance companies and banking institutions, respectively. The majority of the information for public administration, public education, and public health came from the Expenditure and Revenue report of the government of the Bahamas. The industrial total thus derived is based on output at basic prices minus intermediate consumption at purchaser's prices which yield gross value added at purchaser's prices for each industry. As recommended by 2008 SNA, FISIM was distributed across the Industries. The taxes less subsidies on products mainly represent the import taxes, with the inclusion of Value Added Tax (VAT) for the years 2015/16.

Constant prices are calculated using a fixed base year of 2012.

## Bahrain

### Source

The estimates are published by the Central Informatics Organization in the "National Accounts of Bahrain". The following tables have been prepared from replies to the UN National Accounts Questionnaire by the Ministry of Finance and National Economy.

### General

The estimates shown in the following tables have been prepared by the Statistics Department in accordance with the United Nations System of National Accounts 1993 (1993 SNA), so far as the existing data would permit.

In line with international recommendations, which states the importance of changing the base year whenever diverged from the comparison year to be more accurate and representative of the current economic reality, and enable decision-makers in the public and private sectors, to decide the appropriate economic and financial policies. The Directorate of National Accounts in Central of informatics and communication had changed the base year from 2001 to 2010, That is because it's less distortion and volatile in price than in previous years. Also we conduct a comprehensive review of data base for the years from 1980 until 2011, guided by 1993 SNA and 2008 SNA.

As a first step towards the implementation of the 2008 SNA, the financial intermediation services measured indirectly had allocated to the benefiting activities and sectors, in line with the recommendations of the new system. Those actions have led to change in GDP figures at constant and current prices.

### Methodology:

#### Overview of GDP Compilation

Current price estimates of GDP are compiled using combination of benchmark survey data, regular sample survey data and administrative records, Government data, trade statistics, studies such as cost of production of agricultural products and enterprises financial statements (profit and loss accounts and balance sheet) as following:

In the case of agriculture, detail data are collected on agricultural crops products for both crops and livestock through Annual production survey which is conducted by the Department of agriculture. The survey gives results on cost of agricultural crops and farming of animals. Monthly survey of fishing activities conducted by the Department of fishing which gives an estimation on the cost of fishing.

Annual economic survey conducted by national account section (including industries, construction, transportation and communication, private education, private health , hotels and restaurants, business and personal services), data are collected on revenues or sales, intermediate costs of goods and services, inventory change, numbers employed, compensation of employees, and acquisitions and disposals of capital assets and financial assets by type.

Government sector accounts are compiled using annual data on government provided by the Ministry of Finance. Other administrative data, such as number of doctors, clinics, teachers, quantities of imported commodities. Data also are collected from financial statements of public enterprises. Data related to gross capital formation by activity are obtained from enterprises, and from government.

Imports and exports data are obtained from the Central Informatics Organization (CIO), and the balance of payments data from the Bahrain central Banks. Measurement of household final consumption is estimated based on latest Household budget surveys (2006), and modified using CPI and population growth. There are no suitable sources for the measurement of change in stock; hence the estimate is derived residually.

## Source

Response to the United Nations national accounts questionnaire from the Bureau of Statistics, Dhaka.

## General

The latest estimates shown in the following tables have been prepared in accordance with the concepts and definitions of the System of National Accounts 1993 (1993 SNA). Previously, the estimates were prepared in accordance with the United Nations System of National Accounts 1968 (1968 SNA). When the scope and coverage differ for conceptual or statistical reasons from the definitions and classifications recommended in SNA, a footnote is indicated to the relevant tables.

# Barbados

## Source

Reply to the United Nations national accounts questionnaire from the Barbados Statistical Service, Bridgetown, St. Michael. Official estimates are provided by the Statistical Service and published in the "Annual Statistical Digest" of the Central Bank of Barbados.

## General

The estimates shown in the following tables have been prepared in accordance with the United Nations System of National Accounts 1993 (1993 SNA), which was adopted in 2010. When the scope and coverage of the estimates differ for conceptual or statistical reasons from the definitions and classifications recommended in the SNA, a footnote provides explanation.

### General

The national accounts of the Republic of Belarus for the period 1990-2015 were compiled on the basis of methodological principles of the international standard of the System of National Accounts (SNA) adopted in 1993 by the Commission of the European Communities, the International Monetary Fund, the Organisation for Economic Co-operation and Development, the United Nations and the World Bank.

Starting from 2016, the national accounts of the Republic of Belarus are compiled using methodological principles of the international standard 2008 SNA adopted in 2008 by the European Commission, the International Monetary Fund, the Organisation for Economic Co-operation and Development, the United Nations and the World Bank. In view of the implementation of the main provisions of the 2008 SNA in the statistical practice, time series for 2009-2015 were revised accordingly. In compliance with this standard the main principle of recording of economic transactions is the 'accrual method' which is applied in compiling the SNA of Belarus.

The source information for national accounts is the data of state statistical surveys, data of household sample surveys, of the report on budget execution, data of the balance of payments, and other administrative sources.

Methodologies for compilation and computation of statistical indicators and, in particular, for the system of national accounts, are available on the official website of Belstat, in the section Methodology:

<http://www.belstat.gov.by/metodologiya/metodiki-po-formirovaniyu-i-raschetu-statistichesk/>; Methodological provisions on SNA are also available there:

<http://www.belstat.gov.by/metodologiya/metodologicheskie-polozeniya-po-statistike/>

The SNA methodology consists of:

Methodology for compilation of the production account;

Methodology for compilation of gross regional product by production approach at current and constant prices;

Methodology for monthly GDP estimates;

Methodology for monthly GRP estimates;

Methodology for computing quarterly GDP by production approach and by expenditure approach in average annual prices;

Methodology for estimation of non-observed economy;

Methodology for GDP estimation in constant prices;

Methodology for compilation of the capital account;

Methodology for compilation of income accounts;

Methodology for estimation of net taxes on products at constant prices;

Methodology for estimation of labour productivity;

Methodology for compilation of the balance of fixed assets;

Methodology for constructing input-output tables.

The schedule of GDP and GRP estimates is available on the official website of Belstat at

<http://www.belstat.gov.by/metodologiya/metodologicheskie-polozeniya-po-statistike/>.

The main changes in the NA methodology are as follows:

- Since 2011, the National classification of economic activities harmonized with NACE Rev. 1 was in statistical practice. Time series for 2000-2010 were revised accordingly;

- Starting from 2016, the National classification 'Kinds of economic activities' harmonized with NACE Rev. 2 and compatible with ISIC at 4-digit level has been used in statistical practice. Time series for 2009-2015 were revised accordingly.

The national currency is Belarusian ruble. On 1 January 2000 it was redenominated (with three zeroes cut); on 1 July 2016 it was again redenominated (BYN; with four zeroes cut).

The base year for valuation at constant prices is changed every five years, which complies with the international recommendations. The base year for valuation at constant prices for 2010-2015 was the year 2009. Starting from estimates for the quarters of 2016, the base year is 2014.

The financial year is the calendar year.

In connection with the implementation of the main provisions of the 2008 SNA in statistical practice, the methodology and calculation of several indicators was changed. R&D results and weapons systems were included in gross fixed capital formation; the consumption of fixed capital for these assets was revised. Exports, imports, production and intermediate consumption are reflected in the national accounts excluding the value of goods sent abroad for processing. The approach to recording services for owner-occupied dwellings changed. The method of user costs is currently used. The estimation of FISIM was revised, and this value is now referred to final and intermediate consumption as well as distributed across economic activities.

## **Methodology:**

### **Overview of GDP Compilation**

The GDP in Belarus is calculated using three approaches: the production approach, the income approach, and the expenditure approach.

GDP by production approach is computed as the sum of gross value added of economic activities and net taxes

on products.

GDP by income approach reflects primary incomes receivable by units directly engaged in production as well as general government and non-profit institutions serving households (NPISHs). Here the gross operating surplus and gross mixed income are the balancing item and are measured as the GDP by production approach less compensation of employees and net taxes on production and imports.

GDP by expenditure approach is the sum of final consumption expenditures of households, general government and NPISHs, gross accumulation and net exports of goods and services (less exports).

## **Expenditure Approach**

GDP calculated by expenditure approach is the sum of final consumption expenditures of households, general government and NPISHs, gross accumulation and net exports of goods and services (less imports).

Final consumption expenditure consists of final consumption expenditures of households, expenditures of general government on individual goods and services and collective services, and final consumption expenditures of NPISHs. Such grouping shows who pays for final consumption.

Final consumption expenditure of households consists of expenditures incurred by households on consumption goods and services which are used to meet personal needs. Final consumption expenditure of households consists of purchases of consumption goods and services, final consumption expenditures out of incomes received in kind (except social transfers in kind), expenditures on consumptions of goods and services produced by households for own final consumption.

Final consumption expenditure of general government on individual goods and services consists of expenditures incurred by general government on consumption goods and services intended for individual consumption. Such expenditures are financed from the budget.

Final consumption expenditure of general government on collective services. This indicator differs from the previous one in that it encompasses services provided out of the budgetary funds that meet the needs not of individual households, but of the society as a whole or of selected population groups (defence, government, roads, science).

Final consumption expenditure of NPISHs is expenditures incurred by public organizations on consumption goods and services provided to households free of charge, including education and health care services provided by employers to their employees.

Gross fixed capital formation is investment by residents in fixed assets to create new income in future by using them in production.

Changes in inventories includes changes in production stocks, work-in-progress and semi-finished products, finished products, products for sale and state stockpiles. Changes in inventories during a given period is measured as closing stocks less opening stocks valued at average market prices of this period to eliminate price effects.

The data source for gross fixed capital formation and changes in inventories is state statistical surveys of organisations.

Net lending (+) or net borrowing (-) is the excess or deficit of financing compared to net acquisition of non-financial assets. At the level of the economy net lending or net borrowing shows resources payable by an economy to the rest of the world or receivable from the rest of the world.

Net exports of goods and services is measured as the value of exports of goods and services less imports and includes the turnover of Belarusian trade with foreign countries, including the CIS countries.

The data source for exports and imports of goods and services is the balance of payments of the Republic of Belarus.

## **Income Approach**

Compensation of employees is the total remuneration in cash or in kind payable by employers to employees for work performed during the reference period. Compensation of employees is measured on a gross basis, i.e. before taxes and other deductions payable in compliance with the legislation of the Republic of Belarus.

Compensation of employees reflects remuneration of labour of all employees of resident organisations, regardless of whether these employees are residents or non-residents.

Compensation of employees consists of the two main components:

- wages and salaries; and
- social insurance contributions payable by employers.

Wages and salaries for the total economy and by economic activities are defined as the gross wage payroll in cash and in kind, including wage payrolls of small enterprises that did not submit state statistical reports on labour statistics, and wage payrolls or representations of foreign companies, of house-building, housing and garage co-operatives, religious organizations (associations), as well as payments not included in the payroll but referred to wages and salaries in the SNA.

Social insurance contributions include payments made by employers to the Pension fund and social insurance funds and are defined as the value of charges on wage payroll for all types of social insurance. They are estimated on the basis of budgets and reports of corresponding social insurance funds.

Imputed social insurance contributions of employers are payable to employers and directly to their employees, former employees or their dependents who qualify accordingly, out of own funds, without engagement of third party.

The data source for estimation of wages and salaries for the total economy and by economic activities are state statistical surveys of organizations.

The source of information on actual social insurance contributions are administrative data of the Social protection fund of the Ministry of Labour and Social Protection of the Republic of Belarus.

Other taxes on production are taxes associated with the use of production factors (land, assets, labour) as well as the state duty for granting a special permit (license) for certain activities, or other compulsory payments to allow activities of a resident.

The main data source on taxes and subsidies on production and imports is the report on execution of the consolidated budget of the Republic of Belarus.

Gross operating surplus, gross mixed income are the balancing item.

## **Production Approach**

The estimates of output and intermediate consumption and, consequently, gross value added are produced and published for 19 economic activities, 21 subsections and 61 divisions of the National classification of economic activities (OKED), and by institutional sectors.

The process of NA compilation is chiefly based on the data of business surveys and sample surveys: of households on the standard of living and on employment (LFS); of personal subsidiary plots of permanent and temporary rural residents. As additional sources, used are administrative data: of the Ministry of Finance of the

Republic of Belarus on budget execution, on activities of insurance companies; of the National Bank of the Republic of Belarus on output of services in the banking sector, on the balance of payments; and other administrative data of the Ministry of Taxation of the Republic of Belarus, the Ministry of Education of the Republic of Belarus, the Federation of Trade Unions, the Social Protection Fund of the Ministry of Labour and Social Protection of the Republic of Belarus, etc.

Output of goods and services is the total value of goods and services which are the result of economic activity of resident units in the reference period.

Intermediate consumption is the value of goods and services consumed in the reference period in the process of production.

Gross value added is measured at the level of economic activities as the value of goods and services produced in the reference period (output) less the value of goods and services produced in the same period on the process of production (intermediate consumption).

Taxes on products are taxes chargeable proportionally to the number or value of goods produced and sold and services provided, or imported by resident units. Taxes on products include value added tax, excise taxes, customs fees, import customs duties, etc.

Subsidies on products subsidies payable for a unit of good produced or service provided, i.e. proportionally to the number or value of goods produced and sold and services provided, or imported by resident units.

The main data source on taxes and subsidies is the report on execution of the consolidated budget of the Republic of Belarus.

## **Overview of the Compilation of the Integrated Economic Accounts**

The SNA of the Republic of Belarus includes the following accounts: the goods and services account; the production account; the generation of income account; the allocation of primary income account; the secondary distribution of income account; the use of income account; the capital account.

The accounts are compiled for the following institutional sectors:

- Non-financial corporations;
- Financial corporations;
- General government;
- Households;
- NPISHs.

To show the transactions with non-resident units, the rest of the world account is compiled. It reflects all transactions between institutional units of a given economy (residents) and institutional units of other economies (non-residents) that took place during the reference period.

The rest of the world account encompasses the activities of non-resident institutional units in that they interact with resident units. The transactions between residents and non-residents are reflected also in the domestic economy accounts, but there they are not distinguished from transactions between resident units.

The rest of the world account includes the following external economic accounts:

- ☐ - the external goods and services account;
- ☐ - the external primary income and current transfers account;
- ☐ - the external capital account.

The data source for the rest of the world account is the balance of payments of the Republic of Belarus.

The indicators of accounts of each institutional sector are linked in the integrated table showing the main cross-sectoral flows in the economy.

## Belgium

### Source

Data compiled by the Institut des Comptes Nationaux, Banque nationale de Belgique, Brussels and provided to the OECD by Eurostat. The official estimates are published in 'Comptes nationaux', ICN.

### General

From September 2014, these national accounts estimates are compiled according to the 2008 SNA ('System of National Accounts 2008', Commission of the European Communities-Eurostat, International Monetary Fund, Organisation for Economic Co-operation and Development, United Nations and World Bank, 2009).

Detailed methodology of the Belgium national accounts could be found in National Bank of Belgium website: [http://www.nbb.be/doc/dq/f\\_method/M\\_SEC2010\\_FR.pdf](http://www.nbb.be/doc/dq/f_method/M_SEC2010_FR.pdf)

The financial intermediation services indirectly measured (FISIM) are allocated to industries and institutional sectors.

Original chain constant price estimates are referenced to 2016.

### Methodology:

#### Overview of GDP Compilation

GDP measures the market value of the goods and services produced in Belgium, before deduction of consumption of fixed capital. The Belgian quarterly accounts cover all transactions included in the estimation of the annual GDP, without any exclusion. Illegal activities (drugs, prostitution, and smuggling) are also introduced in the annual accounts. Estimates for consumption from own agricultural production is also included. At market prices. Output of government and NPISHs are recorded at cost; value of gross fixed capital formation includes installation costs.

Government income and expenditure are recorded on an accrual basis. Imports are recorded at the time goods are released by customs. Exports are recorded when goods are loaded at ports, except for exports of some large goods (e.g., aircraft), which are recorded at the time of change of ownership (change of ownership in such cases is mostly according to progress of work). To the extent possible, the choice of the quarterly indicators is closely aligned to the data sources and methodology used for the annual accounts.

GDP in volume and at current prices, according to ESA 2010, are calculated initially using the production approach. In addition to this production approach, complete estimates of GDP by means of the expenditure approach are also made, including private and public consumption, total gross fixed capital formation, changes in inventories (the last two merged under the heading "gross capital formation" in Belgium's National Summary Data Page), net exports. The data cover the entire Belgian economy and are adjusted for seasonal and calendar effects. The calculation of the quarterly figures is based on the Chow-Lin method, i.e. a method of interpolation and extrapolation of certain indicators of the annual national accounts. For the main activity branches, as defined in the annual national accounts published by the ICN (Institute of National Accounts) a quarterly split up of the value added is available. These branches are:

1. Agriculture, hunting, forestry and fishing (A)
2. Industry, energy and waste management (B,C,D,E)
3. Construction (F);
4. Trade, transport and horeca (G,H,I);
5. Information and communication (J);
6. Financial and insurance activities (K)
7. Real estate (L);
8. Professional, scientific, technical, administrative and support service activities (M, N);
9. Public administration and education (O,P);

10. Human health and social work activities (Q);

11. Other services (R,S,T)

The taxes (less subsidies) on products are added to obtain the GDP. The data are published in millions of Euros, and in percent changes (compared to the last quarter and compared to the same quarter of the last year).

Other Statistical procedures are:

- Reconciliation of the production and expenditure approach: The changes in inventories are obtained as a residual—the differences between the GDP estimated from the production side and the sum of the main components of the expenditure (final consumption expenditure, gross fixed capital formation and net exports) are included in the changes in inventories.
- Adjustment for seasonal and calendar effects: The method employed in Belgium is TRAMO SEATS.
- Flash estimate: A flash estimate of the real GDP growth is already published after one month. This estimate is obtained following the same structures, methods and concepts as the quarterly national accounts. With respect to the other economic indicators, the GDP flash estimate shows therefore the advantage of relying on a global and coherent picture of the whole economy. Compared to the existing quarterly accounts, the only difference lies in the partial nature of the available basic data (two months against three).

## Expenditure Approach

For the yearly accounts, the main sources used are:

- Household final consumption expenditure: A continuous households budget survey.
- Final consumption expenditure of NPISHs: A yearly specific survey on NPISHs.
- Final consumption expenditure of general government: The budget statements.
- Gross fixed capital formation: Exhaustive administrative data (VAT investments data and yearly accounts of enterprises).
- Changes in inventories: Yearly accounts of enterprises.
- Exports and imports of goods and services: The balance of payments data.
- The coherence of the estimations is ensured by means of the supply and use table.

- Household final consumption expenditure: VAT turnover for retail trade, hotels and restaurant services; the consumer price index is used for deflation.

- Final consumption expenditure of NPISHs: There is no quarterly information available about the final consumption expenditure of NPISHs. The estimation is obtained by interpolating and extrapolating the yearly figures by a trend.

- Final consumption expenditure of general government: The estimates for central government are based on the monthly budget statement (new ESA 1995 framework statistics). The quarterly final consumption expenditure of local government is interpolated starting from a yearly extrapolation.

- Gross fixed capital formation: Gross fixed capital formation of companies is based on VAT investments data. The investment prices index is used for deflation. Capital formation on housing is based on statistics on housing starts; data Residential construction prices index is used for deflation. Gross fixed capital formation for public administration comes from the monthly budget statement. The investment prices index is used for deflation.

- Changes in inventories: Derived as a residual by subtracting the sum of the other expenditure components from total GDP as measured from the production approach.

- Exports and imports of goods and services: The balance of payments data are adjusted to the national accounts concepts. External trade unit value indices are used as deflators.

## Income Approach

No independent estimate of GDP is made from the income perspective. The estimate of value added in basic prices and its income components, compensation of employees (D1), net other taxes/subsidies on production (D29-D39), gross operating surplus/mixed income (B2g/B3g), is done simultaneously, with B2g+B3g being determined as a balancing item.

Compensation of employees (D1) is estimated by a combined use of accounting information (annual accounts,

specific accounting documents for the financial sector, general government accounts) and information on paid social contributions. The totals for D29 and D39 are available from the general government account and the rest of the world account. These totals are distributed over sectors and industries, taking account of the type of taxes and subsidies.

## Production Approach

The production side of the annual accounts is based on administrative data (annual accounts, VAT-files) and surveys (structural business survey). Specific assumptions are made by industry on informal/hidden activities. The exhaustivity and the coherence of the estimations are ensured by means of the supply and use table.

Value added is estimated for some forty branches of activity, but these are aggregated into eleven main branches for publication. The indicators used are as follows:

- Information from the Agricultural Economic Institute for agriculture;
- Industrial production indices for industry (manufacturing and energy);
- VAT records for most market services;
- Interest rates, for financial services;
- Monthly budget statements for general government; and
- Producer and consumer price indices are used to derive volume estimates.

<sup>a</sup> Statistical discrepancy between net lending (+)/net borrowing (-) in the financial account and net lending (+)/net borrowing (-) in the capital account.

## Belize

### Source

Reply to the United Nations national accounts questionnaire from the Central Planning Unit, Ministry of Finance and Economic Planning, Belize. Official estimates are published in "National Accounts Statistics". Information on sources and methods of estimation are published in "National Accounts Statistics - Sources and Methods" and in "Economic Accounts of the Public Sector".

### General

The latest estimates shown in the following tables have been prepared in accordance with the concepts and definitions of the System of National Accounts 1993 (1993 SNA) so far as the data would permit. Previous estimates were prepared in accordance with the United Nations System of National Accounts 1968 (1968 SNA). When the scope and coverage of the estimates differ for conceptual or statistical reasons from the definitions and classifications recommended in the SNA, a footnote provides explanation.

## Benin

### Source

Official aggregates have been published by L'Institut National de la Statistique et de l'Analyse Économique (INSAE) since December 2013 and are prepared annually. The following tables have been prepared from replies to the UN National Accounts Questionnaire by INSAE.

### General

The latest estimates are prepared generally in accordance with the concepts, classifications and definitions recommended in the United Nations System of National Accounts 2008 (2008 SNA). When the scope and coverage of the estimates differ for conceptual or statistical reasons from the definitions and classifications recommended in the SNA.

The year 2015 has been adopted as the new national account's base year. The revised national accounts are now based on the International Standard Industrial Classification of All Economic Activities revision 4 (ISIC Rev.4).

Previously, the aggregates have been calculated using the System of National Accounts 1993 (1993 SNA).

### Methodology:

#### Overview of GDP Compilation

Gross domestic product is estimated through all three approaches (production, expenditure, and income).

The National Institute of Statistics and Economic Analysis (INSAE) has undertaken the process of rebasing the national accounts of Benin and setting the United Nations System of National Accounts 2008 (2008 SNA) since January 2016. The objective is to conform the national accounts of Benin to international standards and adapt them to the new realities resulting from the structural evolution of the national economy. The project was established by Inter-Ministerial Decree N ° 001 / SGG16 / MPDMEF / DC / SGM / DGAE-INSAE of September 07, 2016. The work took place over a period of more than two years.

The project benefited from the technical and financial assistance of the Beninese Government, from the United Nations Economic Commission for Africa (ECA), the Economic and Statistical Observatory of Sub-Saharan Africa (AFRISTAT), International Monetary Fund (IMF), especially AFRITAC West, European Union (EU) and a project of German Cooperation for International Cooperation GmbH (GIZ).

INSAE took advantage of the change in base year of the national accounts to introduce certain recommendations of the 2008 SNA relevant to the Beninese economy. Followings are taken into account:

- the expenditure on Research and development
- the calculation method of the Financial intermediation services indirectly measured (FISIM)
- the defence expenditure on fixed assets
- the calculation method the output of the Central Bank and the output of non-life insurance services recommended by the 2008 SNA.

All related activities of information and communication technologies have been grouped into a new section "Information and Communication". Previously, they were scattered in several branches.

ERETES software package is used for the preparation of national accounts. It allows the preparation of accounts in base year and current year, at current prices and at constant prices, the development of supply and use table (TRE) as well as the accounts of the institutional sectors leading to the table of Integrated Economic Accounts (TCEI).

## Bermuda

### Source

The preparation of the annual national accounts statistics in Bermuda is undertaken by the Government of Bermuda Department of Statistics in Hamilton, Bermuda. The official statistics are published annually on the internet ([www.statistics.gov.bm](http://www.statistics.gov.bm)) as well as in the Ministry of Finance's annual Economic Review publication. Official statistics on Bermuda's Balance of Payments (BOP) are compiled on a quarterly basis by the Department of Statistics and are available on the internet ([www.statistics.gov.bm](http://www.statistics.gov.bm)).

### General

The latest estimates shown in the following tables have been prepared in accordance with the concepts and definitions of System of National Accounts 1993 (1993 SNA). Previously the estimates were prepared in accordance with the United Nations System of National Accounts 1968 (1968 SNA). The conversion to 1993 SNA from 1968 SNA took place in 1998 and included the development of an Industrial Classification system as well as a classification system for transactions and other economic flows. The compilation of GDP was also converted from an expenditure approach to the production approach at this time.

One major deviation from the 1993 SNA is the treatment of the International Business Sector in Bermuda. Strictly speaking, according to the 1993 SNA this sector should be classified as resident. However, they earn income mainly through transactions that are unrelated to the Bermudian economy and far outstrip the capacity of the economy to generate them. Unlike other business units, the output of international business entities (IBEs) is not defined according to the specific goods and services produced but according to the manner in which the IBEs are organized. The insurance, financial and other services produced by these "offshore" business units are not seen as accruing to the Bermudian economy; hence, their output has been imputed based on expenditure and employment in the domestic economy. Even if the actual output of IBEs could be regarded as domestic output, in the absence of statistical reporting requirements by the Bermuda Monetary Authority, problems of measurement would still arise. Measuring output in terms of expenditure and employment in the domestic economy is a reasonable approach but it means that IBEs are treated as "partly resident", a concept that has no counterpart in the 1993 SNA or the Balance of Payments Manual of the International Monetary Fund.

The GDP by industry estimates are available on a calendar year basis from 1996 to 2016. At this point in time, there is no revision policy in place. The GDP estimates are compiled in Bermuda dollars (\$BD). The Bermuda dollar is on par with the United States dollar. The base year for the constant dollar GDP estimates is 2006.

Responsibility for the compilation of the BOP estimates was transferred from the Bermuda Monetary Authority to the Department of Statistics in 2006. The Department follows the guidelines laid out by the International Monetary Authority in the 6th Edition of the Balance of Payments Manual. The BOP estimates are compiled in Bermuda dollars (\$BD).

### Methodology:

#### Overview of GDP Compilation

Gross domestic product is estimated mainly through the production approach. Personal consumption estimates using the expenditure approach are also compiled each year. Supply and Use Tables have been prepared for the years 1996, 1997, 2004 and 2008 in accordance with the 1993 SNA guidelines. The Bermuda Industrial Classification System (BCEA) is based on ISIC Rev. 3.1 and for the most part, maintains its structure, nomenclature and industrial sequence. However, there are differences; the most important difference between the two systems is that BCEA identifies international business activity as a separate economic category. International business activity, which by amalgamating financial and non-financial business units, cuts across two institutional sectors.

## Production Approach

The table of Gross Domestic Product by Industry is compiled at market prices. The production approach is used to estimate virtually all industries. The income approach is used to estimate value added of the public administration sector and non-profit organizations.

The main data source for the production of GDP by industry is the Department of Statistics' annual Economic Activity Survey (EAS). This survey covers approximately 1,500 survey respondents out of a total universe of over 6,000 businesses and organizations. This survey is sent to all sectors of the economy except for the public administration sector. A set of 15 unique questionnaires covering income and expense items are sent each year to the various sectors of the economy. The response rate to this survey has been in excess of 90% for the last two years. The data is blown-up to represent the complete universe using the results from the annual Employment Survey, which provides census data on employment for each industry.

For the international business sector, value added is produced by combining compensation of employees and net taxes on production (payroll tax and other taxes and licences).

For the agriculture industry, most of the reliance for gross output and intermediate expenses estimates is placed on the EAS. Administrative data on crop production are virtually non-existent. No quantitative information is available from the traditional sources for such data from the Department of Conservation Services. The fishing industry is surveyed every second year using the EAS. The off-survey year gross output is compiled using administrative data on the fish and lobster catch from the Department of Environment Protection.

The mining and quarrying industry has significantly reduced in size and its output is now included in the construction industry. Gross output and intermediate consumption estimates are based on the results from the EAS.

The manufacturing sector encompasses a wide range of activities, many of which are undertaken on a small scale in Bermuda. The share of manufacturing in GDP is estimated in 2016 at just 0.8%. Gross output and intermediate consumption estimates are based on the results for the EAS.

The value added for the electricity, gas and water supply industry was compiled using the results of the EAS as well as administrative data for government enterprises. Public financial records are also used as a cross-check against the survey data.

The value added for the construction industry was compiled using the results of the EAS as well as administrative data for government enterprises.

The value added for the wholesale and retail industry was compiled using the results of the EAS. Results from the monthly Retail Sales survey was also used to cross-check the data. The value-added for the hotel and restaurant industry was compiled using the results of the EAS. Results from the quarterly Hotel Gross Receipts and Employment surveys were also used to cross-check the data.

The value added for the transport and telecommunications industry was compiled using the results of the EAS as well as administrative data for government enterprises for the provision of bus services, marine and port services, airport operation and national post activities. Estimates of private sector activity in transport and communications were based essentially on EAS data.

The value added for the finance industry was compiled using the results of the EAS. It is important to note here that the coverage in the EAS for the finance industry is 100% for a number of the sub-sectors and no blow-ups are required. The value added for the real estate industry was compiled using the results of the EAS as well as administrative data for government enterprises. The compilation of value-added for the owner-occupied dwellings did not incorporate the EAS data. Instead estimates for gross rent were computed by multiplying extrapolated

benchmark on housing stock (2010 Census), using data on annual residential completions by extrapolated benchmark data on average rents (2013 Household Expenditure Survey) using the rent component of the CPI. The gross output component of the non-residential building rentals was compiled using the summation of the expenditure in all other sectors of the economy. The value added for the business activities industry was compiled using the results of the EAS.

The convention of measuring gross output in government services (and public administration) as production cost, i.e. the sum of compensation of employees, net indirect taxes, intermediate consumption and consumption of fixed capital (depreciation) was followed. However, no estimates of consumption of fixed capital have been made for government as the required administrative detail is not available. The administrative data for government services is provided by the Accountant General's office. No estimation is required in this industry as actual financial results are provided.

The value added for the education, health and social work industry was compiled using the results of the EAS as well as administrative data for government enterprises. In addition, non-profit institutions serving households or non-market producers utilized the production cost approach to measure their gross output. The value added for the community, social and personal services industry was compiled using the results of the EAS as well as administrative data for government enterprises. In addition, non-profit institutions or non-market producers utilized the production cost approach to measure their gross output.

For private households with employed persons, wages received by these employees constitute the value of the services provided. Since no intermediate consumption is computed for this household activity, compensation of employees = gross value added = gross output. Wages and salaries were derived from administrative employment records on payroll tax.

Data on charities was obtained from the EAS as well as administrative data (audited financial statements) from the Registry General.

The value added for the international business industry was compiled using the results of the EAS for those businesses with a physical presence in Bermuda. For those businesses without a physical presence, a gross-up procedure is utilized to produce estimates on taxes and licence fees, bank charges and professional services.

The constant-dollar GDP estimates are compiled either by deflating current price estimates with a price index (Consumer Price Index being the most prevalent methodology) or by extrapolating base year estimates with a volume index.

## Bhutan

### Source

The National Statistics Bureau of the Royal Government of Bhutan is responsible for compiling and publishing national accounts statistics for the Royal Government of Bhutan. The official estimates were published by the Royal Government of Bhutan in the National Accounts Statistics publication (available at <http://www.nsb.gov.bt>).

### General

The system of national accounts in Bhutan is based on the methodological frame work of System of National Accounts 1968 (1968 SNA) and 1993 (1993 SNA). We have distributed the FISIM across the sectors using the information available with the central Bank on loans and deposits. We have also estimate the expenses on softwares of the government to be added to the capital formation of the government which was treated as the intermediate consumption.

### Methodology:

#### Overview of GDP Compilation

The GDP in Bhutan is calculated by using production and expenditure approaches. GDP by Production is calculated at market prices i.e. sum of all the gross value added generated by the various sectors of the resident producers plus indirect taxes less of subsidies on products.

In case of expenditure approach, GDP is the sum of all the expenses on final consumption expenditure of private and government, Gross domestic capital formation and net exports.

The country has not tried with the Income approach due to lack of detailed breakdown of information.

The GDP estimates are brought out annually both in current and in constant prices. The base year is 2000. Each contributing sector has the deflator to convert the current estimate to constant 2000 prices.

The reporting period is the calendar year. Usually there are few agencies where their reports relates to fiscal year but they are converted to calendar year by taking the average of 2 years.

#### Expenditure Approach

According to the System of National Accounts (SNA), the three main aggregate uses of GDP are consumption and investment of government; private households; and net export. The final consumption expenditure is divided into private household final consumption and government final consumption expenditures. Private household final consumption expenditure was estimated based on the Household Income and Expenditure Survey (HIES) of 2000, 2003 and 2007. 2003 and 2007 household Income and Expenditure surveys were called as Bhutan Living Standard Survey (BLSS). The estimates are then interpolated between the surveys and constant price estimates are extrapolated using population and consumer price index. The sets of data were adjusted for under coverage.

The main source of information to estimate the government final consumption is the annual budget documents of the Ministry of Finance. The estimates of gross domestic capital formation (GDCF) consist of purchase of machinery and equipments; construction activities; and change in stock. For machinery and equipment, the sources of data are mainly from trade documents and in absence of trade documents historical trends are used.

#### Production Approach

The agriculture industry consists of crops, animal husbandry and forest. The Ministry of Agriculture carried out the agricultural census in 2000 and the contribution by the sector to the GDP are based on the census results.

The mining and quarrying industry has been treated as a primary industry, since no separate information on extraction and processing of minerals are available. The information are being made available by the department of geology of mines.

The manufacturing industry has been subdivided into forest based, agro based, cement based and chemical based industries. The majority of registered industries under the manufacturing industry are cement, food, basic iron and steel, wood based industries. It also covers other small-unregistered industries such as weaving, thangka painting and clay work etc. However, the cement industry is the dominant manufacturing industry in the country.

The electricity industry is subdivided into electricity and water. Gas supply, which is mainly the refilling of LPG cylinder, has been merged with the wholesale and retail trade. Electricity in Bhutan is generated from hydropower plants, and the generation of power purely depends on the availability of rainfall during the monsoon season and the snowfall in winters.

The transport, storage and communication industry is subdivided into transport by Air, buses, trucks, taxis and telecommunications. The main sources of information are from RSTA, Bhutan Telecom Annual Report, Druk Air Annual Report and Department of Revenue and Custom's sales turnover information. In case of trucks and taxis, their revenues are extrapolated by using the parameters obtained through case studies or sometimes the past trends are being applied.

The finance, insurance and real-estate industry covers activities of the Central Bank, commercial banks, agricultural credit institution (BDFC), investment companies etc. Also included are the renting, management and operation of real-estate activities. The required information to estimate the gross value of output, intermediate consumption and components of value added of the financial institutions were compiled from the annual reports published by them. Current price estimates of financial institutions were converted to constant price by using the composite index of lending rates, deposit rates and consumer price index. In case of real-estates, the activities are broken down into two parts: rural and urban dwellings. To estimate the gross output of rural dwellings, the receipts from the rural house tax was used as the bases and for the urban dwellings the BLSS 2003 were used as the bases.

The community and social services (general government) industry produces services by engaging in activities such as public administration, defence, sanitary, education, medical and welfare services. The main source of information is the Annual Budget documents of the Ministry of Finance. In SNA, the gross output of the government is defined as equal to its cost of production (i.e. the sum of intermediate consumption, compensation of employees and consumption of fixed capital). The private, social and recreational services industry includes services such as private health, recreation, personal etc. The main sources of information to estimate its contribution to the total GDP was the Bhutan Living Standard Survey 2003. Estimates were moved forward with the help of population growth and the consumer price index.

<sup>a</sup> Discrepancy between the Total Economy and the sum of the domestic sectors.

## Bolivia (Plurinational State of)

### Source

Bolivia's national accounts were first calculated in the 1950s by the Ministry of Planning and Coordination. These calculations later became the responsibility of the Central Bank of Bolivia and, in 1988, the National Institute of Statistics took responsibility for preparing the national accounts, incorporating a number of methodological considerations from revision 4, which would subsequently become the System of National Accounts 1993 (1993 SNA), using 1990 as the base year, yet without implementing the 1993 SNA.

### General

The information given in the attached tables was prepared in accordance with the concepts and definitions of the System of National Accounts 1968 (1968 SNA), which is an integrated, coherent and flexible set of macroeconomic accounts designed for purposes of economic analysis, decision-taking and policymaking.

### Methodology:

#### Overview of GDP Compilation

Gross domestic product (GDP) is estimated using the production approach. The economic transactions that occur in the input-output ratio are summarized and consolidated in standardized worksheets that are used to prepare the output tables and the supply and use balances, which are then synthesized in the input-output matrix with the 35 economic activities and 35 products.

#### Expenditure Approach

All components of gross domestic product by expenditure type are estimated through the expenditure approach except private final consumption expenditure which is obtained as a residual. The estimates of the government final consumption expenditure are based on the annual government accounts furnished by the respective government agencies. Increase in stocks estimates are based on information obtained from the enterprises. For public capital information, estimates are obtained from financial statements of the public institutions. The estimates are classified by type of goods and subdivisions of the public sector. For the estimates of private capital formation, the Instituto Nacional de Estadística requests detailed information from the enterprises. The estimates of imported machinery and equipment are based on c.i.f. import values classified by use or economic destination. Trade margins and transport expenses are then added. The estimation of domestically produced capital goods is done on the basis of annual industrial statistics. Data on exports of goods and services are obtained from the balance of payments accounts. The value of non-monetary gold export is added to the f.o.b. figures while imports are estimated by the Banco Central. For the constant price estimates, government expenditure on wages and salaries are revalued at base-year prices while purchases of goods and services are deflated by implicit price or cost-of-living indexes. The estimates of private consumption expenditure are obtained as a residual. For the remaining items, price deflation is used.

#### Income Approach

The cost structure of the gross domestic product has not been estimated since 1969.

#### Production Approach

Agricultural activities, according to the national accounts nomenclature, consist of the following economic activities: non-industrial agricultural products; industrial agricultural products; coca; livestock products; and forestry, hunting and fishing. For agricultural output, information on production volume (land area, yield and output by crop, number of head per species of livestock, cubic metres of forest species extracted, etc.) was based on the results of the agricultural census and the national agricultural survey carried out by the National Institute of Statistics. The national agricultural survey was performed in various years up until 1997; the data from the surveys were recorded at the departmental level. This is supplemented with information from the administrative records of

the following institutions: Ministry of Agriculture and Rural Affairs; Bolivian Agricultural Technology Institute, now the Bolivian Agricultural Technology System; Research Centre on Tropical Agriculture (Santa Cruz); Inter-American Institute for Cooperation on Agriculture (IICA); Chambers of agriculture; Producers' associations; Specialized publications (special studies and news articles); National Food Security Monitoring and Early Warning System; Stockbreeders' Federation; Poultry Producers' Association; Dairy Farmers' Association; Superintendency of Forests; Chamber of Forestry; National Forest Information System; Centre for Forest Development; Environmental Defence League; and Centre for Fisheries Development.

Hydrocarbons activities, according to the national accounts nomenclature, consist of the following products: crude petroleum and natural gas (including construction of wells by companies exploring petroleum and natural gas deposits). These exploration services have been included since 1997, as recommended in revision 4 of the 1993 SNA, and are reported under construction and business services. The allocation of output (to intermediate consumption, gross fixed capital formation, changes in inventories and exports) in physical terms is valued on the basis of the respective prices of each product. Petroleum and gas output is treated as intermediate consumption (petroleum and gas for refined products) and gross fixed capital formation, which consists of the drilling of new wells and the deepening of old wells to improve output; this work is performed by capitalized companies following exploration. Changes in inventories measure variations in inventories of petroleum and gas extracted and stored for refining or export. Taxes (on products) on petroleum, gas, imports and exports at well-head prices are included to yield figures for supply and demand at purchaser's prices. Lastly, supply and use balances are obtained at current and constant prices, using 1990 as the base year. The sources of information on this activity are the monthly reports of the State petroleum company Yacimientos Petrolíferos Fiscales Bolivianos (YPFB), the financial and economic analyses of the Finance and Accounting Office of the Accounting and Costs Department of YPFB, the annual sales report of the Marketing Business Unit of YPFB, the Statistical Bulletin on External Trade of the Central Bank of Bolivia and administrative records of Andina S.A. and Chaco (firms created with the capitalization of YPFB).

Mining activities, according to the national accounts nomenclature, consist of metallic and non-metallic minerals (divisions 10 to 14 of the International Standard Industrial Classification (ISIC), revision 3, Mining and quarrying). This activity includes two product groups: metallic minerals; and non-metallic minerals. The allocation of output (to intermediate consumption, gross fixed capital formation, changes in inventories and exports) in physical terms is valued on the basis of the respective prices of each product. Mineral output is treated as intermediate consumption (ore for smelting); export data are obtained from external trade data by product, and the value of smuggled gold is also calculated. Supply and use balances are calculated by origin (domestic and imported), taking into account the taxes on products and imports that are levied on groups of mineral products, as well as trade margins. This yields figures for supply and demand at purchaser's prices, in current values and constant 1990 values. The sources of information used are the statistical yearbook of mining and metallurgy of the Office of the Deputy Minister of Mining and Metallurgy, the annual report of the National Association of Medium-scale Miners, the National Federation of Mining Cooperatives, the magazine published by Gold Field Mineral Services, Ltd., the annual survey of the manufacturing industry, administrative records and the construction cost index.

Food and beverage manufacturing activities, according to the national accounts nomenclature, consist of the following activities: fresh and processed meats; dairy products; mill and bakery products; sugar and confectionery products; miscellaneous food products; and beverages. The output of each activity of the food manufacturing industry is calculated from three main sources of information: annual survey of the manufacturing industry, formerly the Single Economic Form; quarterly survey of the manufacturing industry (physical volume index of the manufacturing industry, sales volume index, manufacturing industry producer price index and other indices derived from the survey); and data on agricultural inputs taken from national accounts information on agricultural activity (agro-industrial chains).

Other manufacturing activities, according to the national accounts nomenclature, consist of the following: manufactured tobacco; textiles; apparel; leather and leather products; wood and wood products; paper, paper products and printing and publishing; chemicals and chemical products; refined petroleum products; non-metallic mineral products; basic metal products; metal products; machinery and equipment; and miscellaneous manufactured articles. The sources of information used to obtain output volume and prices include the following:

annual survey of the manufacturing industry; quarterly survey of the manufacturing industry (physical volume index of the manufacturing industry, sales volume index, manufacturing industry producer price index and other indices derived from the survey); data on agricultural inputs taken from national accounts information on agricultural activity (agro-industrial chains); survey on margins and channels; household budget survey; import and export lists; associations and chambers of producers; reports on trends in respect of various products and on economic activity; the information bulletin of the Superintendency of Hydrocarbons; the annual sales report of YPFB; the yearbook and statistical bulletin of the National Secretariat of Mining and Metallurgy (now the Office of the Deputy Minister of Mining and Metallurgy); Vinto Metallurgical Company records; external records on the metal products, machinery and equipment sector (taking into account the fact that 90 per cent of the products in this category are imported); and the directory of the census of economic establishments and new companies. For the valuation of output and of the other macroeconomic variables taken into account in the supply and use balance (except imports), the following sources of price information are used: annual average prices from the annual survey of the manufacturing industry; quarterly average producer prices in the manufacturing industry; average prices from the consumer price survey; monthly and annual international average prices; and the construction cost survey.

Electricity, gas and water activities, according to the national accounts nomenclature, consist of the following: electricity (including the generation, collection and transmission of electric energy for use by household, industrial and commercial users); gas (including the distribution of gaseous fuels through a system of mains to household, industrial, commercial or other users and excluding the transportation by pipeline of gaseous fuels on a fee or contract basis); and water (including the collection, purification and distribution of water to household, industrial, commercial or other users and excluding irrigation system operation for agricultural purposes and treatment of wastewater in order to prevent pollution). The determination of the gross value of production involves, the generation of a production volume table showing, on the basis of the data obtained from source documents (financial statements of companies, cooperatives, etc.), the behaviour of production in terms of volume. The valuation of this volume using price index data gives the gross value of production at current prices; the value at constant prices is determined using chain indices. Intermediate consumption and final consumption are based on consumption data by category (electricity and water), from which the level of intermediate consumption and the amount corresponding to final consumption are obtained. In the case of gas (10-kilo cylinders), owing to the characteristics of this product, all production is used for final consumption. Determination of imports and exports: import and export data are taken from information sources pertaining to the external sector. Taxes: tax figures are determined by the Department of Institutional Units on the basis of information from the National Tax System. The sources of the information used to calculate production volume and prices are as follows: Office of the Deputy Minister of Energy and Hydrocarbons; Superintendency of Energy; Superintendency of Hydrocarbons; gas volume indicators prepared by the National Institute of Statistics; water distribution companies, by department; National Institute of Statistics, Department of Administrative Records; and water volume indicators prepared by the National Institute of Statistics.

Construction activities, according to the national accounts nomenclature, include the following: the execution of projects such as buildings and civil engineering works by general and specialized contractors (construction firms that work primarily on a contract basis). Although the supply of goods and services in this activity generally consists of domestic output and imports, the sole component of supply is domestic output. Such output is valued at producer prices, since it includes taxes and does not include trade margins, as these goods are produced on a contract basis by a producer (contractor) for a purchaser (contracting party), with no possibility of commercial intermediation. Construction output is treated as gross fixed capital formation and intermediate consumption. The entire value of new construction projects, whether residential buildings, non-residential buildings or civil engineering works, is recorded under gross fixed capital formation because such projects entail the addition of new tangible fixed assets to the economy. The same is true of major maintenance expenses for civil engineering works, since they make it possible to extend or maintain the service life of built assets. Ordinary maintenance and repairs performed on residential buildings (dwellings) and non-residential buildings (business, industry and services) are considered intermediate consumption because they do not change the asset's performance, capacity or expected service life; they simply maintain it for the length of its useful life. The sources of information on this activity are the following: municipal governments; building, maintenance, repair and demolition permits for dwellings and other buildings issued by the mayors' offices of the country's major cities; National Institute of Statistics; construction cost index by type of dwelling; foreign direct investment by purpose, disaggregated into

capitalized companies, gas pipelines and other investments; Ministry of Finance; public investment budget and budget performance; institutional, sectoral, regional and project distribution from the National Public Investment System; cash operations of the non-financial public sector reported by the Fiscal Programming Unit; financial statements of capitalized companies; and reports, bulletins, papers from various information sources.

Wholesale and retail trade activities include establishments classified under divisions 51 and 52 (classes 5110 to 5260) of ISIC (revision 3), which correspond to wholesale and retail trade, except of motor vehicles and motorcycles, and repair of personal and household goods.

Transport activities, for the purpose of national accounts, are defined as the transport margin necessary to convert figures valued at producer prices into the prices paid by purchasers. According to the 1993 SNA, the output of transportation is measured by the value of the amounts receivable for transporting goods or persons. Storage services make it possible for a good available at a given point in time to differ in quality from the same good available at an earlier point in time if its supply and demand conditions change in the meanwhile. This service can thus be viewed as transportation over time rather than space. The sources of information on this activity include the financial statements of public, private and capitalized passenger and cargo transportation companies; companies providing transport-related services such as air and land terminals; companies that provide highway services in exchange for the collection of tolls; travel and tourism agencies; customs dispatchers; companies providing storage services; departmental and national information on motor vehicles, by type of service and vehicle from the Single Register of Motor Vehicles; municipal ordinances and other provisions regulating urban public transport and charges; bulletins, papers and reports issued by various deputy ministers' offices and Government divisions concerned with land, air and river transport.

Communications activities consist of services to the public through local and long-distance telephone, telegraph, telex and cellular telephone communications. It also includes the transmission of images, sound, Internet service and other data via cable. Also included in this activity are postal and courier services (transport and delivery of mail, sale of postage stamps, mailbox rental services, etc.). The sources of information on this activity include the following: financial statements of telecommunications companies (Entel, Telecel, AES, Viva GSM, COMTECO, COTAS and Bolivia Tel); financial statements of telephone companies and cooperatives; financial statements of the Bolivian postal service (Empresa de Correos de Bolivia); administrative records of the National Rural Telecommunications Service; and financial statements of private courier companies.

Financial activities consist of the following subsectors: the Central Bank of Bolivia; Monetary financial institutions (private commercial banks and foreign banks); other financial intermediaries (cooperative banks, mutual institutions, State funds, mixed funds, private funds, bonded warehouses, financial service companies); and insurance and reinsurance companies. The services provided by insurance companies consist of granting insurance policies to economic agents. These companies collect insurance premiums with which they finance the payment of claims arising from damage or loss suffered by the various agents of the economy. This also includes all activities to provide coverage against the consequences of specified events to which economic agents are exposed. The sources of information on this activity include administrative records or financial statements of the following financial institutions: Central Bank of Bolivia, consolidated banking sector, consolidated other financial intermediaries and consolidated insurance sector.

Business services activities involve the establishments classified in divisions 70, 71, 72, 73 and 74 (classes 7020 to 7499) of ISIC (revision 3), which correspond to real estate, renting and business activities. This category comprises nine product groups: real estate, renting of agricultural machinery and equipment, renting of construction and civil engineering machinery and equipment and architectural and engineering services, renting of other machinery and equipment, computer activities, accounting and legal activities, architectural and engineering activities, advertising, and other activities. The information used for the calculation of macroeconomic variables and for the groups of which the activity is comprised was taken from output tables prepared by experts at the Department of National Accounts, from which price indices, volume indices and values were obtained for each economic activity, in addition to the records and fees of professionals in the various associations and the consumer price survey.

Housing ownership activities include the establishments classified in division 70, class 7010, of ISIC (revision 3), which corresponds to real estate, within the national accounts product classification. This includes the exploitation of dwellings, parts of buildings and/or apartments, in their various forms of tenancy, whether occupied by the owners or by third parties. This means that owners, while they do not pay rent for the use of the dwelling, are treated as owners of fictitious (unincorporated) enterprises that produce housing services for their own consumption. The output of this economic activity excludes the exploitation of buildings or parts of buildings for non-residential purposes, such as hotels, rooming houses and other lodging places. The sources of information used for the calculation of macroeconomic variables and for the groups of which the activity is comprised are as follows: National Population and Housing Census (inter-census rate), 1992, National Institute of Statistics; Household budget survey, National Institute of Statistics; and Consumer price survey from the National Institute of Statistics.

Community, social and personal services activities are classified in division 80 of ISIC (revision 3) and consist of the following six groups: education services; health services; recreational services; repair services; basic sanitation services (refuse disposal); and other services. The sources of information include: the Department of Social Statistics of the National Institute of Statistics; the Institute's household budget survey; motor vehicle data by department; the Institute's census of economic establishments; budget performance data (expenditure) for the central Administration, decentralized entities and municipal governments; and administrative records of the Internal Revenue Service.

Restaurants and hotels activities include the establishments classified in division 55 (classes 5510 and 5520) of ISIC (revision 3), which corresponds to hotels and restaurants. The restaurant activity involves the sale of prepared foods and drinks for immediate consumption on the premises in establishments such as restaurants, cafés, lunch counters and refreshment stands. Also included are catering activities and take-out activities, as well as the operation of dining cars. Sale through vending machines is excluded, as are the above-mentioned activities carried out in connection with the provision of lodging. The hotel activity includes the provision on a fee basis of short-term lodging, camping space and camping facilities, whether open to the general public or restricted to members of a particular organization, as well as restaurant services provided in connection with the provision of lodging. Included also is the operation of sleeping cars. Activities in this class are those usually offered by hotels, motels, inns, school dormitories, residence halls, rooming houses, guest homes and houses, shelters, etc. The information used for the calculation of economic variables and for the group corresponding to this economic activity are obtained from restaurants, national accounts data on changes in the volume of activity in the food sector, international tourism data, the population growth rate in urban areas, hotels, and national and international tourism data from the National Institute of Statistics, Department of Administrative Records.

Domestic services activities include the activities of private households employing all kinds of domestic personnel such as maids, cooks, waiters, valets, butlers, laundresses, gardeners, gatekeepers, chauffeurs, baby-sitters, etc.

Public administration activities provide non-traded services to the community (collective services), which by definition are non-market services. The output of non-market services is valued as the sum of intermediate consumption and value added, minus market output. The sources of information on this activity are as follows: budget performance information; financial statements of institutions; cash operations; and general budget of the nation. The bulk of the revenues received by public administrations come from mandatory contributions (taxes, social security contributions, etc.), local transfers and external transfers. Public administrations are classified into the following: central administration; local and regional administration, and social security.

<sup>b</sup> Item does not consider consumption of fixed capital.

## Bonaire, Sint Eustatius and Saba

### Source

Reply to the United Nations National Accounts Questionnaire from Statistics Netherlands. Prior to the constitutional changes of October 2010, the GDP for Bonaire was compiled by the CBS of the Netherlands Antilles.

### General

The latest release of figures is not comparable with the figures prior to the constitutional changes for a number of reasons. The current GDP calculation is based on the 2008 SNA, while the previous figures were calculated based on the 1993 SNA. Furthermore, the constitutional change also brought about certain structural changes in the economy. Trade with Curaçao (for example) is now recorded as imports and exports, whereas previously, it was domestic trade. Changes also occurred in processing government data, because the islands of the Caribbean Netherlands are now registered as special municipalities of the Netherlands (public entity).

Data includes total of three special municipalities of Caribbean Netherlands which are Bonaire, Sint Eustatius and Saba.

## Bosnia and Herzegovina

### Source

The statistical system of Bosnia and Herzegovina (BiH) encompasses Agency for Statistics of Bosnia and Herzegovina (BHAS), the Central Bank of Bosnia and Herzegovina (CBBH) and other official producers of statistics at the level of Bosnia and Herzegovina; Federal Office of Statistics of Federation of Bosnia and Herzegovina and Institute for Statistics of Republika Srpska at the entity level, and other official producers of statistics in Federation of Bosnia and Herzegovina and Republika Srpska. At the level of Brcko District, Brcko Branch is organised as a part of the Agency for Statistics of Bosnia and Herzegovina, and together with other producers of statistics in Brcko District, it is a part of the statistical system of FBiH.

### General

Currently, the National Accounts of Bosnia are compiled in accordance with the European System of Accounts 2010 (ESA 2010). ESA 2010 has been implemented in May 2017 for the period 2005 onwards.

Previously, the compilation of the national accounts in Bosnia and Herzegovina was based on methodology recommended by the United Nations the System of National Accounts 1993 (1993 SNA) and the European System of Accounts 1995 (ESA 1995) since 1996. In the period until 1991, as in all former republics of ex-Yugoslavia, the concept of material production was used, that is calculation of only material production and services related to production. There are no reliable estimates of GDP for the war period 1992 – 1995.

Estimates of GDP by production approach are prepared according to the KD BiH 2010 which is harmonized with European Classification of Activity NACE Rev. 2.

Agency for statistics of BiH calculates components of production and income account for the Institutions of General Government of BiH and Central bank of BiH. The components compiled by BHAS are allocated to the entities and the Brcko District using the coefficients of the distribution of indirect taxes from single account of Indirect Tax Authorities (ITA) of BiH to the entities.

Agency for statistics of BiH (BHAS) is responsible for the estimation of gross domestic product (GDP) for BiH by production approach. Data are prepared by the Agency for Statistics of Bosnia and Herzegovina based on the data compiled separately for the two Entities ( Federation of Bosnia and Herzegovina and Republika Srpska), and by Brcko District. These estimates are compiled by the respective entities' institutes of statistics and by Bureau of Statistics of Brcko District. Data aggregated at the two digit level are transmitted to BHAS.

### Methodology:

#### Overview of GDP Compilation

Statistical institutions in BiH compile the annual GDP by the production and by the expenditure approach at current and constant prices (at previous year prices) and GDP by income approach at current prices. GDP by the production approach is the primary approach determining GDP and the volume growth of annual GDP.

#### Expenditure Approach

With a view to improving national accounts statistics of Bosnia and Herzegovina, Agency for Statistics BiH started compilation of Gross Domestic Product by expenditure in 2006. The year 2004 was chosen as the starting reference period for the construction of the series, as the first year in which new data sources were available, enabling compilation of the GDP by expenditure approach. The estimates were calculated at current and at prices of the previous year, thus allowing the comparison of the data between two consecutive years on a quantitative basis.

GDP by the expenditure approach is measured as total domestic final consumption corrected by external trade

balance with the rest of the world. Each component of GDP by expenditure can be estimated using a variety of data sources and techniques, with the aim of obtaining as comprehensive a measure as possible of the level of economic activity. The first estimates of GDP by the expenditure approach in BiH have been compiled at the level of country as a whole instead of aggregating the macroeconomic data compiled by the entities as it is done with the estimates of GDP by production. This approach was followed because balance of payments estimates are only available for the country as a whole. Moreover, estimates of expenditures on final uses rely significantly on detailed data on imports and exports, which are likely to be more reliable when referred to the country as a whole than to the entities. This is because the allocation of imports and exports to the entities in accordance with the residence of the importer/exporter does not necessarily reflect the residence of the final user of goods imported or the origin of the exports.

The year 2004 was chosen as the starting reference period for the construction of the series based on the availability of source data. The year 2004 is the first year for which data from a household budget survey with countrywide coverage became available, thus providing an important data source for estimating household's consumption. That year is also the first one for which foreign trade data were compiled with countrywide coverage, based on uniform customs declarations submitted to the Indirect Taxation Authority. GDP by the expenditure approach has been estimated at current prices since 2004 and at constant prices since 2005, thus permitting measuring of the volume growth rates between two years.

The estimates of the main components of the expenditure GDP are based on statistical surveys, administrative data sources and balance of payments statistics prepared by the Central Bank of Bosnia and Herzegovina.

### **Income Approach**

Rough experimental calculation of GDP by income approach started for the first time at the beginning of 2008.

The data sources for the calculation of income categories are the same as for GDP by production approach. Sources of data for taxes on production and subsidies on production are detailed lists of taxes and subsidies delivered by Ministry of Finance and budgetary statistics.

The item, consumption of fixed capital, does not exist in financial statements for direct budget users, so the experts from the National Accounts department have estimated this item.

Operating surplus is the residual category of value added in financial and non-financial corporations and in activities of households (imputed rentals of dwellings). As output of dwelling activities of owner-occupiers is estimated by the cost approach and gross operating surplus is the sum of consumption of fixed capital and net operating surplus.

Mixed income is the residual category in the calculation of value added of unincorporated enterprises. Gross mixed income is revenue of self-employed for their engagement in the production process. The category is estimated separately for household agriculture production and for unincorporated enterprises.

GDP by income approach is calculated on an annual basis and current prices.

### **Production Approach**

For the calculation of gross domestic product administrative sources of data are used, as well as data obtained through official statistical survey.

The calculation is based on the data of business enterprises registered and allocated according to the Classification of activities KD BiH 2010, which has been harmonized with the European Classification of Economic Activities (NACE – Rev.2). The business enterprises are at present, for the GDP calculation, grouped, as institutional units, according to the areas of activities, according to the headquarters and main activity, and not according to the units of homogenous activity.

Aggregate countrywide estimates of gross domestic product based on the production approach are prepared by the Agency for Statistics of Bosnia and Herzegovina based on the data compiled separately for the two Entities, Federation of Bosnia and Herzegovina and Republika Srpska, and for Brcko District. These estimates are compiled by the respective entities' institutes of statistics and by Bureau of Statistics of Brcko District (the Branch of the BHAS since 2005).

Estimates of GDP by production are prepared at detailed level of the NACE Rev. 3 and disseminated at the division level. Non observed economy (NOE) estimations and the estimate of imputed rental of owner-occupied dwellings are included in calculation of GDP. Illegal activities are not included. These adjustments for exhaustiveness were carried out following the tabular approach recommended by OECD-EUROSTAT for NOE, and user cost approach for imputed rentals. The estimate was made for 2004 (2004-benchmark year).

The GDP calculation at constant prices was done and published for the first time in 2004. For the calculation of GDP at constant prices the concept of the single indicator method is used, due to the lack of adequate deflators of intermediate consumption. The use of single indicator implies the assumption of fixed I/O coefficients of the base year (the previous year). Main indicators used for the annual calculation of constant prices are volume indices, CPI and number of employees' indices taken over from branch statistics.

## Botswana

### Source

The national accounts statistics in Botswana are prepared by the National Accounts Statistics Unit (NASU), which is a unit within the Economic Statistics Division of the Statistics Botswana of the Ministry of Finance and Development Planning, Gaborone. Official estimates together with methodological notes are published in a series of reports entitled "National Accounts of Botswana". The following statistical sources are used to compile the National Accounts Statistics of Botswana: Annual Economic Survey (AES) - annually, Survey of Recent Trends (SRT) - quarterly, Agriculture Statistics - annually, Government Accounts (Central and local), External Trade Statistics - quarterly, Balance of Payments Statistics - annually, Household Income and Expenditure, Survey (HIES)-2009/10 (every 10 years), Price Statistics - quarterly, Employment Statistics - twice a year, Transport Statistics - quarterly, Mine Statistics - quarterly, Population Projections (every 10 years). The following tables have been prepared from the successive replies to the United Nations national accounts questionnaire.

### General

The latest estimates shown in the following tables have been prepared in accordance with the concepts and definitions of the System of National Accounts 1993 (1993 SNA). These include the adoption of some of the terminology of the 1993 SNA, such as Financial Intermediation Services Indirectly Measured (FISIM). The classification of taxes has also been brought into line with the 1993 SNA and reclassification of mineral exploration costs from current to capital expenditure.

The previous estimates are generally in accordance with the classifications and definitions recommended in the United Nations System of National Accounts 1968 (1968 SNA). The most detailed description of the sources and methods used for the national accounts estimation is found in the published National Accounts reports.

Data starting 1994 is reported with calendar year.

When the scope and coverage of the estimates differ for conceptual or statistical reasons from the definitions and classifications recommended in SNA, a footnote is indicated to the relevant tables.

### Methodology:

#### Overview of GDP Compilation

The production approach is used to estimate value of almost all industries. The income approach is used for some sub-groups of private services and for producers of government services.

#### Expenditure Approach

Estimate of final expenditure on GDP may be obtained in two ways. First output of goods and services can be traced through the economy from the original producer to final uses; this is known as commodity flow approach. Alternatively, the receipt and expenditure of the various economic transactions of the system can be looked at directly in order to identify the expenditures that are final and this is referred to as direct estimation of final expenditure. In Botswana national accounts, direct estimation is used for most of the expenditure components.

All components of gross domestic product by expenditure type are estimated through the expenditure approach and private final consumption expenditure is obtained from household income and expenditure surveys. The estimates of the government final consumption expenditure are based on annual statements of the accounts of central and local governments. Changes in stocks are estimated on the basis of data from individual mines and Livestock data from Ministry of Agriculture. Gross fixed capital formation of the government sector is estimated from the government accounts and of the private sector from the Annual Economic Survey and administrative data. Included in the capital formation estimates are the cost of land clearings and imputed values of new huts. The estimates of imports and exports of goods and services are based on balance-of-payments data.

## Income Approach

Estimates of compensation of employees are obtained from individual industries and other sectors are estimated from formal employment figures. Data on payment of wages and salaries are distinguished whether paid to residents or to non-residents and are also classified by type. The main source for estimating consumption of fixed capital formation in the private sector is the Annual Economic Survey. For government assets, straight-line depreciation is applied, the constant percentage varying for different types of assets. Indirect taxes are extracted from the Accountant General's annual statements of accounts and the Trade Statistics Unit.

## Production Approach

The production approach is used to estimate value added of almost all industries. The income approach is used for some sub-groups of private services and for producers of government services.

For the traditional farming of the agricultural sector, the main source used for crops is the annual agricultural sample survey and for cattle, the sources used include Botswana Core Welfare Indicator Survey (BCWIS) and annual reports of Botswana Meat Commission. The method has been to obtain quantities of production from the above mentioned sources and apply unit values. Data from the 2009/10 BCWIS also provided information on milk production for own use and the value of meat consumed. From the two surveys, detailed input-output activity analysis of the traditional farming sector has been conducted. For the freehold farmers, the main source has been the Annual Economic Survey and to some extent the annual agricultural survey. For the non-respondents, a grossing-up is made by reference to other farms of the same type.

The estimates for the mining sector are obtained from the Annual Economic Survey.

For the manufacturing sector which is dominated by about three sub-industries, the source is the Annual Economic Survey and quarterly survey of Industrial Production. The two above mentioned sources cover all the primary industries, whilst the rest of the sectors are covered by the Annual Economic Survey. The Annual Economic Survey gives information for estimating the cost of intermediate consumption. All the government industries go to their respective sectors.

For construction, the private contractors and brigades are covered by the Annual Economic Survey. Estimates of construction outlays for sites and services are supplied by city and town councils whilst rural huts construction estimates are imputed on the basis of the BCWIS data. Estimates of construction carried out by the government departments are derived from the analysis of government accounts.

The main source of information for the trade sector is the Annual Economic Survey. The data obtained from this source is grossed-up to allow for under-coverage. Gross margins are estimated as the difference between sales and purchases of goods for resale. Taxes levied on imported goods are treated as indirect taxes collected by the trade sector.

As far as the transport sector is concerned, the source of data is the Annual Economic Survey.

Gross output of financial institutions is made up of the actual sales of services and an imputed service charge.

Estimates for producers of government services are based on the Annual Statements of Accounts of the central and local governments.

For the constant price estimates, consumer price index and other sectors like mining, general government are extrapolated by volume index.
