XBRL

ACCOUNTING

Coming Soon to a Computer Near You

As expected, earlier today the SEC proposed making XBRL filing mandatory, with the largest 500 US companies filing in XBRL as early as Q1 of 2009.

What is XBRL? XBRL stands for eXtensible Business Reporting Language, a computer language that's like bar coding for financial information. Companies can use XBRL to tag each piece of data in their 10-K, 10-Q, earnings release, etc. making it computer readable.

With the right software, your model could read those tags and put the relevant data into the right location with the press of a button. Allowing you to spend less time on manual labor like typing stuff into your model and checking it and more time on analyzing it. XBRL has the potential to significantly change (in a good way) how you and I do financial statement analysis, modeling and research.

With over 10,000 U.S. GAAP XBRL tags, covering everything from simple items that appear on the balance sheet (e.g., total assets) to data buried deep in the footnotes (e.g., the amount of pension benefits expected to be paid over the next five years) the analytical possibilities are endless. XBRL could allow investors to analyze things that they may not have in the past because it took too much time to pull together the data. For example, quality of earnings screens could evolve from basic changes in accruals to a focus on the underlying assumptions or valuation allowances. However, XBRL is not a cure all; it's just taking current information (with all of its baggage) and tagging it. XBRL is not changing any accounting or disclosure rules, it's just a better delivery mechanism.

In the future, XBRL could be used to enhance how companies present their financial results, allowing for much more flexibility. In an XBRL world, the financial statements no longer need to be limited to a sheet of paper or one static presentation. Why not let investors toggle between a direct and indirect method cash flow statement, or a historical cost and fair value balance sheet. The financial statements could also provide different layers of information, letting investors dig as deep as they want, for example the balance sheet could layer on off-balance-sheet items like operating leases, special purpose entities or a company’s pension plan, and the income statement could allow you to drill down to find out what is driving each line item (e.g., is it cash flows, accruals, change in estimates, mark to market etc.) Of course, there are investors that won’t care how the companies present the information as they can take the raw data and focus on whichever items they choose. Easily accessible detailed data may diminish the need for shortcuts, like trying to boil everything down to earnings. That may even help cure the disease of short-termism.

In this piece we briefly review XBRL, its potential benefits and challenges. We also discuss Credit Suisse HOLT’s hands on experience with XBRL.
XBRL

As expected, earlier today the SEC voted unanimously to propose requiring public companies to file their financial statements in XBRL. According to the proposed timeline, companies with total market floats of over $5 billion could begin filing their basic financial statements in XBRL as early as the first quarter of 2009, with the footnote data following the next year. The rest of corporate America (and international filers) would begin filing over the next three years. The rule isn't finalized (there's still a 60 day public comment period), but we expect the final rule to pass with no major changes.

So what is XBRL? You can think of an XBRL tag as a bar code (for financial information), on the surface a bar code doesn't provide much information, it's just a bunch of lines and numbers, however, there is a wealth of information (product description, price, etc.) associated with each code that's below the surface, accessible with the right technology (a bar code reader). XBRL is very similar, on the surface, as you can see in Exhibit 1, an XBRL tag looks like a bunch of gibberish.

Exhibit 1: XBRL Tag for Microsoft’s Current Unearned Revenue

Source: Microsoft’s Investor Central, Credit Suisse Accounting & Tax Research

However, with the right software, it is clear that this tag provides lots of information: including, that it represents short-term unearned revenue for Microsoft, it's denominated in U.S. dollars, the amount is $10,385 million, and the information is as of March 31, 2008, as you can see from a snapshot of Microsoft’s balance sheet in Exhibit 2.

Exhibit 2: Snapshot of Current Liabilities from Microsoft’s Balance Sheet

Source: Microsoft’s Investor Central, Credit Suisse Accounting & Tax Research

The U.S. GAAP tags (more than 10,000 of them) range from items that appear on the balance sheet (e.g., unearned revenue) to data buried in the footnotes (e.g., Microsoft also
tags the components of unearned revenue—volume licensing programs, undelivered elements and other, along with unearned revenue by segment, as you can see in Exhibit 3). Ideally when companies are tagging their results using XBRL, the information in the footnotes would be as easily accessible as what you see on the face of the financial statements.

Exhibit 3: Microsoft XBRL Tags for Components of Unearned Revenue and Related Footnote

Note 4 – Unearned Revenue
The components of unearned revenue were as follows:

<table>
<thead>
<tr>
<th></th>
<th>March 31, 2008</th>

</tbody>
</table>

Unearned revenue $12,139 $12,646

Source: Microsoft’s Investor Central, Credit Suisse Accounting & Tax Research

XBRL is not a brand new concept. It has been used in other corners of the capital markets. For example, companies listed on the Shanghai and Shenzhen stock exchanges are required to file their financial statements in XBRL; U.S. banks currently issue their Call Reports to the FDIC in XBRL; and a number of U.S. companies have voluntarily filed their financial statements in XBRL with the SEC as part of a pilot-test of the new technology.

XBRL’s Potential Impact on Analysis

Think about how you do your analysis today, how you build your models. In many cases, it involves going to a source document, like a 10-K, 10-Q, earnings release, etc. reading it, pulling out the relevant numbers, and plugging them into a spreadsheet; then checking and rechecking the numbers to make sure you haven’t made any mistakes, a cumbersome process that has to take place before you can actually do the real work of analyzing the data.

What if, instead, your model could read the 10-K, 10-Q or earnings release and put the relevant data into the right location in your spreadsheet with the press of a button? Sounds pretty good, (less time on manual labor like typing stuff into your model and more time on analyzing it); that’s the idea behind XBRL. It’s like bar coding for financial information. Companies would tag each piece of data in their 10-K, 10-Q, etc. With the right software, your spreadsheet could read those tags, the same way that you currently read the data in the document. In other words, it makes the information in these reports instantly searchable and analyzable.

XBRL could also open new doors to analysts, allowing them to analyze things that they may not have in the past because it took too much time to pull together the data. Ideally, when XBRL is fully up and running, there would be an enormous amount of comparable data available for immediate analysis: allowing investors to quickly figure out which companies hold auction rate securities or have the largest exposure to Level 3 assets and
liabilities; quality of earnings screens could evolve from basic changes in accruals to a focus on the underlying assumptions or valuation allowances, etc. etc. etc. The need for shortcuts may diminish too, why try and boil everything down to earnings and a simple P/E multiple, when you can more easily unearth the metrics that indicate whether the company is truly building shareholder value, rather than the company defined metrics.

XBRL could have a significant impact on quantitative research and strategies as well, where the number of factors and relationships that can be tested efficiently and accurately would increase exponentially (if the footnote and MD&A data are tagged). For a further discussion see the Quantitative research team's May 14, 2008 piece on XBRL, The ABCD's of XBRL.

However, XBRL is not a cure all; it’s just taking current information (with all of its baggage) and tagging it. XBRL is not changing any accounting or disclosure rules, it's just a better delivery mechanism. Also, there are still plenty of unanswered questions: For example: what will the companies tag? So far, the SEC has only proposed requiring XBRL for the 10-K's and 10-Q's. Of course many investors rely on other sources of information including company earnings releases, which are often issued weeks ahead of these SEC filings. We hope that eventually the SEC will require companies to tag their earnings releases as well as their K's and Q's or that companies will choose to tag them on their own. Another example: will companies only tag the financial statements and footnotes, or will they tag the MD&A, pro-forma numbers and key performance indicators (KPI’s) as well?

**XBRL Could Help Change How Information is Presented**

XBRL could also allow for a completely different presentation of financial statements, that today is still tied to the antiquated idea of financial statements as one sheet of paper. Of course today's businesses are too complex for that to work, hence we get hundreds of pages of footnotes, MD&A etc. With the help of XBRL the financial statements could provide different layers of information with the click of a mouse. For example, a company could present a very basic balance sheet that with a click on a particular line item would expand to provide more detail and then expand again with another click to provide even more detail and so on and so on. You can see how easy this might be through a high level view of a small slice of the XBRL taxonomy in Exhibit 4, where we start with the XBRL taxonomy for the balance sheet, expand the assets, then current assets, then inventory to find its components (finished goods, work-in-process, etc.). Presenting financial statements that provide different layers of information in a user friendly manner is not as far fetched as it might seem; for example, check out Microsoft's Investor Central web site at www.microsoft.com/msft/ic. You may be wondering, what's taxonomy? (It sounds painful) simply put the XBRL taxonomy is the dictionary for XBRL it contains descriptions and detailed information about the thousands of XBRL tags. See www.xbrl.us for the full U.S. GAAP taxonomy.
Exhibit 4: High Level View of XBRL U.S. GAAP Taxonomy For Inventory

Potential Benefits of XBRL

As when bar coding was first introduced over 40 years ago, there is no way to dream up all of the benefits of XBRL before it is even rolled out unless you have a crystal ball. With that in mind here are just a few of the potential benefits of XBRL:

- Significant reduction in manual input and need to check and recheck numbers that go into models.

- Increased transparency with information from footnotes, maybe the MD&A and other data more readily available for further analysis. Could allow analysts and investors to build better models by incorporating factors they had not used previously.

- Almost real time data, more accurate information available instantly at time of filing.

- Standardized XBRL tags should provide better comparability across companies.

- Allows for the convergence of information globally and translation of financial reporting data into multiple languages as accounting standards converge.

- XBRL could extend beyond SEC filings (e.g., 10-Ks and 10-Qs) and include earnings releases and industry data. Conceivably any piece of financial information could be tagged under XBRL.

- Ability to share data easily would be a benefit to users of financial statements as well as preparers and auditors.

If investors can more efficiently and effectively digest financial data, it could result in more efficient capital markets.

Challenges for XBRL

Of course it’s not all peaches and cream for XBRL, the technology faces a number of challenges, including:

- Will the data be timely? (i.e., will companies only tag their 10-K’s and 10-Q’s, or will they provide tagged earnings releases as well?)
How to keep it up to date as accounting rules and disclosure requirements continue to change.

The level of assurance the auditor provides, (i.e., will the XBRL tags be audited).

One of the biggest challenges in developing XBRL has been and will continue to be, developing standardized tags.

Extensibility, one of the benefits of XBRL, could cause problems. If companies create their own tags, it would reduce comparability and a newly tagged data item might be missed by investors.

With so many tags, what level of detail will companies tag? How will this be policed? Inconsistent tagging, where some companies tag each data item and others may not, would be a problem.

International convergence, there are significantly fewer XBRL tags for International Financial Reporting Standards (IFRS) than under U.S. GAAP. Will investors lose transparency if we move from U.S. GAAP toward an IFRS system?

Remember, XBRL is not a cure all; it’s just taking current information and tagging it, the data is available, it’s just tough to get your hands on. Therefore, today’s problems with comparability and “one time” items will still cause problems in an XBRL world.

**HOLT’s Experience with XBRL**

XBRL is more than just an idea, it is actually being put to use today. We asked Tom Hillman from HOLT a few questions about HOLT’s experience with the new technology. HOLT is an advisory service of Credit Suisse offering unique insights into corporate performance and valuation. Companies are comparable across sectors, regions and over time because accounting and inflation distortions are systematically adjusted for to assess the underlying economics of the business. Tom Hillman, CFA, CPA, co-heads the global HOLT Valuation & Analytics group which is responsible for maintaining, improving, and garnering investment insights from their proprietary framework of 20,000 stocks in more than 60 countries. What follow are our questions, along with his answers:

**How is HOLT using XBRL today?**

- **First we built an infrastructure to leverage the XBRL technology.** With this infrastructure, HOLT has been able to significantly expand the coverage of its Chinese A-share database from 300 firms to well over 1,000 firms in the past year by incorporating the XBRL data from the Shanghai and Shenzhen stock exchanges. In addition to the benefit of a significant increase in coverage, we have also found the data to be of high quality.

**What are the challenges you faced as you applied the XBRL technology?**

- **A lack of uniformity between taxonomies pre and post China adopting IFRS has been difficult.** Key data items, such as gross property, plant and equipment which were available for 2006 filings are no longer required for 2007 filings. This data is still available in their annual reports, its just not being presented electronically. Ideally all financial data in the annual report would be tagged consistently each year.

**Even though it’s early on, what benefits are you seeing from the use of XBRL?**

- **HOLT sources its key fundamental data from the best data vendors in the world and uses attributes such as quality, timeliness, and coverage to assess the vendors. The potential benefits of XBRL are many, including increased access, accuracy, quality, consistency, transparency, and detail of financial reports. In addition, through the automation of financial report delivery, we should see enhanced efficiency and better timeliness of financial reports. In the future, when companies file their financial data**
electronically, we expect to have this information in our HOLT database near instantaneously.

How do you expect HOLT will use XBRL in the future?

- As more countries adopt XBRL, HOLT will look to incorporate this into our database for the aforementioned benefits. Since XBRL allows for the possibility of significantly more data to be made available to investors, difficult to obtain key industry data items could be used to improve our industry models.

Tom, as a member of the CFA Institute's XBRL Working Group, can you talk about the key characteristics necessary for XBRL to be a useful technology for investors?

- The working group was established to represent the needs of investors and analysts in the global implementation of XBRL and we developed five key principles to outline the XBRL framework attributes that are necessary to maximize the investors' benefits from XBRL. These benefits are:
  - Core taxonomy (or structure of tagging elements) should be predefined by current financial reporting standards.
  - Taxonomy extensibility should maintain the level of data comparability as defined by GAAP and other regulatory requirements.
  - Ultimately, companies should deliver required financial reports to regulators using the established XBRL framework.
  - The general public should have equal access to the XBRL-tagged information.
  - Regulators should develop the necessary infrastructure and protocol to ensure the timely updating of the established XBRL framework as outlined in the preceding four key principles.

- The complete discussion on these key principles can be found on the CFA Institute Center web site, www.cfainstitute.org/centre/index.html. The second principle on extensibility is a significant concern to me. If extensions occur frequently, then we would potentially lose comparability and accuracy of financial reports, two significant benefits of XBRL. If taxonomies are properly defined initially, then the need to extend taxonomy should be a rare and unique event.
Disclosure Appendix

Important Global Disclosures

David Zion, CFA, CPA, Amit Varshney, CFA, FRM & Christopher Cornett, CPA each certify, with respect to the companies or securities that he or she analyzes, that (1) the views expressed in this report accurately reflect his or her personal views about all of the subject companies and securities and (2) no part of his or her compensation was, is or will be directly or indirectly related to the specific recommendations or views expressed in this report.

The analyst(s) responsible for preparing this research report received compensation that is based upon various factors including Credit Suisse’s total revenues, a portion of which are generated by Credit Suisse’s investment banking activities.

Analysts’ stock ratings are defined as follows***:

Outperform (O): The stock’s total return is expected to exceed the industry average* by at least 10-15% (or more, depending on perceived risk) over the next 12 months.

Neutral (N): The stock’s total return is expected to be in line with the industry average* (range of ±10%) over the next 12 months.

Underperform (U)**: The stock’s total return is expected to underperform the industry average* by 10-15% or more over the next 12 months.

*The industry average refers to the average total return of the relevant country or regional index (except with respect to Europe, where stock ratings are relative to the analyst’s industry coverage universe).

**In an effort to achieve a more balanced distribution of stock ratings, the Firm has requested that analysts maintain at least 15% of their rated coverage universe as Underperform. This guideline is subject to change depending on several factors, including general market conditions.

***For Australian and New Zealand stocks a 7.5% threshold replaces the 10% level in all three rating definitions, with a required equity return overlay applied.

Restricted (R): In certain circumstances, Credit Suisse policy and/or applicable law and regulations preclude certain types of communications, including an investment recommendation, during the course of Credit Suisse’s engagement in an investment banking transaction and in certain other circumstances.

Volatility Indicator [V]: A stock is defined as volatile if the stock price has moved up or down by 20% or more in a month in at least 8 of the past 24 months or the analyst expects significant volatility going forward.

Analysts’ coverage universe weightings are distinct from analysts’ stock ratings and are based on the expected performance of an analyst’s coverage universe* versus the relevant broad market benchmark**:

Overweight: Industry expected to outperform the relevant broad market benchmark over the next 12 months.

Market Weight: Industry expected to perform in-line with the relevant broad market benchmark over the next 12 months.

Underweight: Industry expected to underperform the relevant broad market benchmark over the next 12 months.

*An analyst’s coverage universe consists of all companies covered by the analyst within the relevant sector.

**The broad market benchmark is based on the expected return of the local market index (e.g., the S&P 500 in the U.S.) over the next 12 months.

Credit Suisse’s distribution of stock ratings (and banking clients) is:

<table>
<thead>
<tr>
<th>Global Ratings Distribution</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Outperform/Buy*</td>
<td>45% (56% banking clients)</td>
</tr>
<tr>
<td>Neutral/Hold*</td>
<td>41% (56% banking clients)</td>
</tr>
<tr>
<td>Underperform/Sell*</td>
<td>12% (47% banking clients)</td>
</tr>
<tr>
<td>Restricted</td>
<td>2%</td>
</tr>
</tbody>
</table>

*For purposes of the NYSE and NASD ratings distribution disclosure requirements, our stock ratings of Outperform, Neutral, and Underperform most closely correspond to Buy, Hold, and Sell, respectively; however, the meanings are not the same, as our stock ratings are determined on a relative basis. (Please refer to definitions above.) An investor’s decision to buy or sell a security should be based on investment objectives, current holdings, and other individual factors.

As of the date of this report, Credit Suisse acts as a market maker or liquidity provider in the equities securities that are the subject of this report.

Principal is not guaranteed in the case of equities because equity prices are variable.

Commission is the commission rate or the amount agreed with a customer when setting up an account or at anytime after that.
CS may have issued a Trade Alert regarding this security. Trade Alerts are short term trading opportunities identified by an analyst on the basis of market events and catalysts, while stock ratings reflect an analyst's investment recommendations based on expected total return over a 12-month period relative to the relevant coverage universe. Because Trade Alerts and stock ratings reflect different assumptions and analytical methods, Trade Alerts may differ directionally from the analyst's stock rating.

The author(s) of this report maintains a CS Model Portfolio that he/she regularly adjusts. The security or securities discussed in this report may be a component of the CS Model Portfolio and subject to such adjustments (which, given the composition of the CS Model Portfolio as a whole, may differ from the recommendation in this report, as well as opportunities or strategies identified in Trading Alerts concerning the same security). The CS Model Portfolio and important disclosures about it are available at www.credit-suisse.com/ti.

Important Credit Suisse HOLT Disclosures

With respect to the analysis in this report based on the Credit Suisse HOLT methodology, Credit Suisse certifies that (1) the views expressed in this report accurately reflect the Credit Suisse HOLT methodology and (2) no part of the Firm's compensation was, is, or will be directly related to the specific views disclosed in this report.

The Credit Suisse HOLT methodology does not assign ratings to a security. It is an analytical tool that involves use of a set of proprietary quantitative algorithms and warranted value calculations, collectively called the Credit Suisse HOLT valuation model, that are consistently applied to all the companies included in its database. Third-party data (including consensus earnings estimates) are systematically translated into a number of default variables and incorporated into the algorithms available in the Credit Suisse HOLT valuation model. The source financial statement, pricing, and earnings data provided by outside data vendors are subject to quality control and may also be adjusted to more closely measure the underlying economics of firm performance. These adjustments provide consistency when analyzing a single company across time, or analyzing multiple companies across industries or national borders. The default scenario that is produced by the Credit Suisse HOLT valuation model establishes the baseline valuation for a security, and a user then may adjust the default variables to produce alternative scenarios, any of which could occur. Additional information about the Credit Suisse HOLT methodology is available on request.

The Credit Suisse HOLT methodology does not assign a price target to a security. The default scenario that is produced by the Credit Suisse HOLT valuation model establishes a warranted price for a security, and as the third-party data are updated, the warranted price may also change. The default variables may also be adjusted to produce alternative warranted prices, any of which could occur.

CFROI®, HOLT, HOLTolio, HOLTSelect, ValueSearch, AggreGator, Signal Flag and “Powered by HOLT” are trademarks or service marks or registered trademarks or registered service marks of Credit Suisse or its affiliates in the United States and other countries. HOLT is a corporate performance and valuation advisory service of Credit Suisse.

Additional information about the Credit Suisse HOLT methodology is available on request.

For Credit Suisse disclosure information on other companies mentioned in this report, please visit the website at www.credit-suisse.com/researchdisclosures or call +1 (877) 291-2683.

Disclaimers continue on next page.
This report is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or which would subject Credit Suisse, the Swiss bank, or its subsidiaries or its affiliates ("CS") to any registration or licensing requirement within such jurisdiction. All trademarks, service marks and logos used in this report are trademarks or service marks or registered trademarks or service marks of CS or its affiliates.

The information, tools and material presented in this report are provided to you for information purposes only and are not to be used or considered as an offer or the solicitation of an offer to sell or to buy or subscribe for securities or other financial instruments. CS may not have taken any steps to ensure that the securities referred to in this report are suitable for any particular investor. CS will not treat recipients as its customers by virtue of their receiving the report. The investments or services contained or referred to in this report may not be suitable for you and it is recommended that you consult an independent investment advisor if you are in doubt about such investments or investment services. Nothing in this report constitutes investment, legal, accounting or tax advice or a representation that any investment or strategy is suitable or appropriate to your individual circumstances or otherwise constitutes a personal recommendation to you. CS does not offer advice on the tax consequences of investment and you are advised to contact an independent tax adviser. Please note in particular that the bases and levels of taxation may change.

CS believes the information and opinions in the Disclosure Appendix of this report are accurate and complete. Information and opinions presented in the other sections of the report were obtained or derived from sources CS believes are reliable, but CS makes no representations as to their accuracy or completeness. Additional information is available upon request. CS accepts no liability for loss arising from the use of the material presented in this report, except that this exclusion of liability does not apply to the extent that liability arises under specific statutes or regulations applicable to CS. This report is not to be relied upon in substitution for the exercise of independent judgment. CS may have issued, and may in the future issue, a trading call regarding this security. Trading calls are short term trading opportunities based on market events and catalysts, while stock ratings reflect investment recommendations based on expected total return over a 12-month period as defined in the disclosure section. Because trading calls and stock ratings reflect different assumptions and analytical methods, trading calls may differ directionally from the stock rating. In addition, CS may have issued, and may in the future issue, other reports that are inconsistent with, and reach different conclusions from, the information presented in this report. Those reports reflect the different assumptions, views and analytical methods of the analysts who prepared them and CS is under no obligation to ensure that such other reports are brought to the attention of any recipient of this report. CS is involved in many businesses that relate to companies mentioned in this report. These businesses include specialized trading, risk arbitrage, market making, and other proprietary trading.

Past performance should not be taken as an indication or guarantee of future performance, and no representation or warranty, express or implied, is made regarding future performance. Information, opinions and estimates contained in this report reflect a judgement at its original date of publication by CS and are subject to change without notice. The price, value and income from any of the securities or financial instruments mentioned in this report can fall as well as rise. The value of securities and financial instruments is subject to exchange rate fluctuation that may have a positive or adverse effect on the price or income of such securities or financial instruments. Investors in securities such as ADR's, the values of which are influenced by currency volatility, effectively assume this risk.

Structured securities are complex instruments, typically involving a high degree of risk and are intended for sale only to sophisticated investors who are capable of understanding and assuming the risks involved. The market value of any structured security may be affected by changes in economic, financial and political factors (including, but not limited to, spot and forward interest and exchange rates, time to maturity, market conditions and volatility, and the credit quality of any issuer or reference issuer. Any investor interested in purchasing a structured product should conduct their own investigation and analysis of the product and consult with their own professional advisors involved in making such a purchase.

Some investments discussed in this report have a high level of volatility. High volatility investments may experience sudden and large falls in their value causing losses when that investment is realised. Those losses may equal your original investment. Indeed, in the case of some investments the potential losses may exceed the amount of initial investment, in such circumstances you may be required to pay more money to support those losses. Income yields from investments may fluctuate and, in consequence, initial capital paid to make the investment may be used as part of that income yield. Some investments may not be readily realisable and it may be difficult to sell or realise those investments, similarly it may prove difficult for you to obtain reliable information about the value, or risks, to which such an investment is exposed.

This report is being distributed in the United States by Credit Suisse Securities (USA) LLC, in Switzerland by Credit Suisse; in Canada by Credit Suisse Securities (Canada), Inc.; in Brazil by Banco de Investimentos Credit Suisse (Brasil) S.A.; in Japan by Credit Suisse Securities (Japan) Limited, Financial Instrument Dealers, Director of Kanto Local Finance Bureau (Financial Instruments) Number 66, a member of Japan Securities Dealers Association, The Financial Futures Association of Japan; elsewhere in Asia/Pacific by whichever of the following is the appropriately authorised entity in the relevant jurisdiction: Credit Suisse (Hong Kong) Limited, Credit Suisse Equities (Australia) Limited, Credit Suisse Securities (Thailand) Limited, Credit Suisse Securities (Malaysia) Sdn Bhd, Credit Suisse Singapore Branch, Credit Suisse Securities (India) Private Limited, Credit Suisse Securities (Europe) Limited, Seoul Branch, Credit Suisse Taipei Branch, PT Credit Suisse Securities Indonesia, and elsewhere in the world by the relevant authorised affiliate of the above. Research on Taiwanese securities produced by Credit Suisse Taipei Branch has been prepared by a registered Senior Business Person. Research provided to residents of Malaysia is authorised by the Head of Research for Credit Suisse Securities (Malaysia) Sdn Bhd., to whom they should direct any queries on +603 2723 2020.

In jurisdictions where CS is not already registered or licensed to trade in securities, transactions will only be effected in accordance with applicable securities legislation, which will vary from jurisdiction to jurisdiction and may require that the trade be made in accordance with applicable exemptions from registration or licensing requirements. Non-U.S. customers wishing to effect a transaction should contact a CS entity in their local jurisdiction unless governing law permits otherwise. U.S. customers wishing to effect a transaction should do so only by contacting a representative at Credit Suisse Securities (USA) LLC in the U.S.

Please note that this report was originally prepared and issued by CS for distribution to their market professional and institutional investor customers. Recipients who are not market professional or institutional investor customers of CS should seek the advice of their independent financial advisor prior to taking any investment decision based on this report or for any necessary explanation of its contents. This research may relate to investments or services of a person outside of the UK or to other matters which are not regulated by the FSA or in respect of which the protections of the FSA for private customers and/or the UK compensation scheme may not be available, and further details as to where this may be the case are available upon request in respect of this report.
