

## Concept note

# Developing a Programme for the Implementation of the 2008 SNA and Supporting Statistics in the Latin American and Caribbean region

16 - 18 September 2013, Rio de Janeiro, Brazil

## Background

1. The Implementation Programme for the System of National Accounts 2008 (2008 SNA) and supporting statistics represents a global statistical initiative, which was mandated by the Statistical Commission at its fortieth session following the adoption of the 2008 SNA as the international standard for the compilation and dissemination of national accounts.
2. With the 2008 SNA being flexible to accommodate all countries and economies, regardless of their level of statistical development, each country has to review with its users the relevant changes that are applicable to the country and consider its adoption for the change over to the 2008 SNA. At the same time, user consultation should revisit the scope, detail and quality of the accounts and supporting economic statistics by taking a view on which socio-economic and financial policies have to be informed by the structural and short-term economic statistics, including annual and quarterly national accounts.
3. Three distinct stages are identified for the changeover to the 2008 SNA through a multi-year programme, irrespective of the level of statistical development namely:
  - (a) Stage I. Review of a strategic framework and detailing of national and regional implementation programmes;
  - (b) Stage II. Adaptation of classification frameworks, business registers and frames, surveys, administrative data sources and information technology infrastructure; and
  - (c) Stage III. Application of adapted frameworks and source data, backcasting and changeover to 2008 SNA.
4. When preparing a national implementation programme for the 2008 SNA and supporting statistics it is necessary to take into consideration the national and regional policy needs to determine the scope and detail of the national accounts required to inform policy makers. These goals are also guided by the requirements set by the Statistical Commission for assessing the scope and detail of the national accounts. The chosen scope and detail of the national accounts also determine the data sources needed for timely and accurate estimates of the national accounts aggregates. By mapping the statistical requirements – where you want to go, and the outcome of an assessment of the statistical system – where you are, it is possible to determine the required actions – how to get there. These required actions are translated into an implementation programme for the 2008 SNA and supporting statistics, providing key features and deliverables that are specific, measurable, relevant and can be carried out within a specific time frame. Countries are encouraged to develop their implementation programmes for the 2008 SNA and supporting economic statistics within the framework of national strategies for the development of statistics.

## **Purpose**

5. UNSD in collaboration with ECLAC and the IBGE aims to initiate the formulation of a national strategy and implementation programme for the 2008 SNA and supporting system-wide socio-economic statistics with the objective of strengthening the national statistical system (NSS) in support of improved policy making. It is expected that this initiative would lead to a multi-year statistical programme to move the country over to the 2008 SNA and to establish a minimum common data set of annual and high frequency statistics with quality “fit for purpose”.

## **Organisation of work**

6. The initiative is expected to review the adequacy of the national statistical production process and institutional arrangements supporting national accounts compilation through consultations with all stakeholders of the NSS. This system wide assessment should lead to a shared strategic vision for the development of the statistics for monitoring and evaluating policy programmes with clear country and government ownership and leadership and which is integrated with the national planning and budget processes.

7. It is understood that for the development of an effective strategic vision for the development of statistics, a broad participation of the ministries and agencies being part of the NSS, including users and producers of statistics, is good practice. In addition, donor community should be involved in the assessment, particularly those that are already active in supporting statistical capacity building, to ensure donor coordination for technical and financial support at an early stage.

8. The seminar will be organized over 3 days as a back-to-back meeting with the workshop of environmental economic accounts. The first day (16 September) will be a national seminar focusing on policy needs and priorities of Brazil. The second and the third days (17-18 September) will be a regional meeting focusing on priorities for neighbouring countries.

## **Consultations**

9. For the purpose of this initiative, consultations will be held with senior staff of IBGE, the Central Bank, Ministry of Finance, Ministry of Economy, Ministry of Environment, and other relevant ministries. In addition, consultations will be held with representatives from international and regional organizations and donor countries.

## **Expected outcome**

10. IBGE in collaboration with national partners and in consultation with UNSD and ECLAC will prepare an outcome document which will contain:

- (a) an initial assessment of the current capacity of the NSS to produce and disseminate a core data set of annual and high frequency statistics consisting of economic statistics and national accounts in support of national policy programmes;

- (b) a consolidation of the statistical requirements, assessment and actions for preparing a national implementation programme for the 2008 SNA and supporting statistics; and
- (c) a proposed institutional arrangement to coordinate activities in the formulation of the statistical implementation programme for economic statistics and national accounts

### Supporting documents

11. UNSD has developed a number of tools to support the development of a programme for the implementation of the 2008 SNA and supporting statistics. These include:

- (a) The note: *Developing a global programme for the implementation of the 2008 SNA and supporting statistics*;
- (b) Statistical System Information fact sheet;
- (c) Diagnostic Framework for National Accounts and Supporting Economic Statistics (DF-NA&ES); and
- (d) Status of National Accounts and Supporting Economic Statistics

12. At its forty-second session in 2011 the UNSC adopted an update of the milestone and data set measures to assess the scope and compliance with the 2008 SNA<sup>1</sup> and initiated a review to accommodate a broader scope of economic statistics and short term economic statistics, including quarterly national accounts, for early warning of exposures and risks<sup>2</sup>. The ISWGNA organizations also apply other generally accepted frameworks in performing or facilitating data quality assessments for national accounts and supporting data sets, which include the IMF's GDDS and SDDS metadata, information gleaned in the discovery process during quality assessment reviews, including self assessments, peer reviews, as well as IMF data modules of the (ROSC, and periodic international surveys.
