To enhance confidence and build credibility in rapid estimates for use in policy decisions they will have to prove more (or at least equally) accurate as results produced by other economic forecasts.”
Iaan:

‘To enhance confidence and build credibility in rapid estimates for use in policy decisions they will have to prove more (or at least equally) accurate as results produced by other economic forecasts’.

- The earlier official statistics publishes figures the more estimates are included. But with estimates and econometrics the question is, are the official estimates better than others (from researchers)?
Iaan:

‘To enhance confidence and build credibility in rapid estimates for use in policy decisions they will have to prove more (or at least equally) accurate as results produced by other economic forecasts’.

- The earlier official statistics publishes figures the more estimates are included. But with estimates and econometrics the question is, are the official estimates better than others (from researchers)?
- **What is the criterium? When should an estimate be ’official’?** (Horse race of methods?)
laan:
'To enhance confidence and build credibility in rapid estimates for use in policy decisions they will have to prove more (or at least equally) accurate as results produced by other economic forecasts'.

- The earlier official statistics publishes figures the more estimates are included. But with estimates and econometrics the question is, are the official estimates better than others (from researchers)?
- What is the criterium? When should an estimate be ’official’? (Horse race of methods?)
- How much new or special information should be available/included?
Iaan:

'To enhance confidence and build credibility in rapid estimates for use in policy decisions they will have to prove more (or at least equally) accurate as results produced by other economic forecasts'.

- The earlier official statistics publishes figures the more estimates are included. But with estimates and econometrics the question is, are the official estimates better than others (from researchers)?
- What is the criterium? When should an estimate be 'official'? (Horse race of methods?)
- How much new or special information should be available/included?
- Could official estimates lead to official econometric methods? (Variety of methods)
Ataman:

- Frequency or timeliness of quarterly data, what is higher on you wish list (regarding GDP and other indicators like production or turn over)?
Roberto:

- Given differences in data situation there probably must be different estimation strategies. What does rapid estimation with different data sources and estimation methods mean for international comparisons?
Roberto:

- Given differences in data situation there probably must be different estimation strategies. What does rapid estimation with different data sources and estimation methods mean for international comparisons?
- How important is international comparability for rapid estimates?
Roberto:

- Given differences in data situation there probably must be different estimation strategies. What does rapid estimation with different data sources and estimation methods mean for international comparisons?
- How important is international comparability for rapid estimates?
- How disaggregated should an estimate be?
Questions for Panel Discussion

- How can the timeliness of short term statistics be improved?
Questions for Panel Discussion

- How can the timeliness of short term statistics be improved?
- Can NSOs benefit from collaborating with research and academic institutes to develop rapid estimates?
