

Indicators and a Monitoring Framework for the SDGs

A presentation by SDSN
to the Expert Group Meeting on SDG Indicators
25th February 2015

Summary of global public consultation

Multi-stakeholder engagement

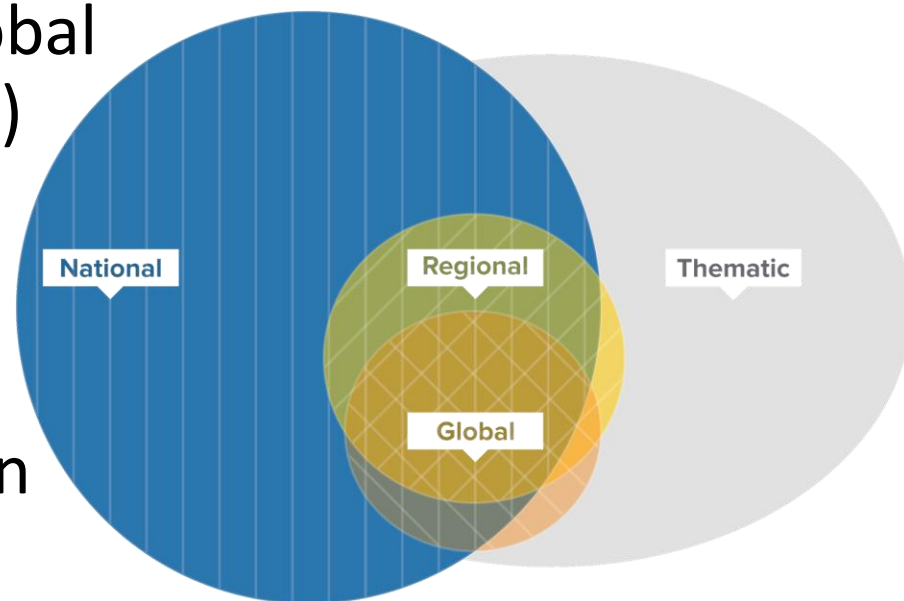

- Over 600 individual sets of comments received
- From CSO, government, universities/research institutions, and UN

Global dissemination

- 50,000 downloads around the world
- 522 organizations from 52 countries participated in the consultation

Key messages

- Differentiate between 4 monitoring levels
- Maintain a limited set of Global Monitoring Indicators (GMIs)
- Propose GMIs that are simple and policy relevant
- Propose GMIs that lend themselves to disaggregation
- Improve timeliness of data
- Invest in statistical capacity development

Impact on our proposals

#70 Area of public and green space as a proportion of total city space

- Directly relates to OWG target 11.7 on safe and accessible green and public spaces
- Access to public/green space improves quality of life and is a first step toward civic empowerment and greater access to institutional/political spaces
- Provides rights of way required for streets and infrastructure (and their connectivity) and green space necessary for recreation and ecosystem services
- Responds to a current, worsening trend in allocations of land for public space & streets
