

Elements of data disaggregation

Expert group meeting on the indicator framework
for the post-2015 development

New York, 25-26 Feb 2015

Elements of data disaggregation

- Sex
- Age
- Location
- Income
- Education
- People living with Disabilities
- Ethnicity
- Race
- Refugees
- Indigenous
- Migration status
- Older persons

Basic analytical elements

1. The Principle of No one left behind
2. Issues of discrimination, human rights
3. Very specific groups, such as such as migrants, or refugees or people with disabilities.

Concerns

- How do we ensure that the disaggregation is not pushed to the national level only--need to reflect this at the global level.
- How do we include consistent listing of marginalized groups and disaggregation
- Feasibility of disaggregating
- Cost implications
