Department of Economic and Social Affairs

The Department of Economic and Social Affairs of the United Nations Secretariat is a vital interface between global policies in the economic, social and environment spheres and national action. The Department works in three main inter-linked areas: (i) it compiles, generates and analyses a wide range of economic, social and environmental data and information on which States Members of the United Nations draw to review common problems and to take stock of policy options; (ii) it facilitates the negotiations of Member States in many intergovernmental bodies on joint courses of action to address ongoing or emerging global challenges; and (iii) it advises interested Governments on the ways and means of translating policy frameworks developed in United Nations conferences and summits into programmes at the country level and, through technical assistance, helps build national capacities.

Note

The designations employed and the presentation of the material in this publication do not imply the expression of any opinion whatsoever on the part of the Secretariat of the United Nations concerning the legal status of any country, city or area, or of its authorities, or concerning the delimitation of its frontiers or boundaries.

In general, statistics contained in the present publication cover a period up to 2013 or 2014 and as available to the United Nations Secretariat up to November 2015. They reflect the country nomenclature currently in use.

The term "country" as used in the text of this publication also refers, as appropriate, to territories or areas.

The designations "developed" and "developing" which appear in some tables are intended for statistical convenience and do not necessarily express a judgement about the stage reached by a particular country or area in the development process.

Symbols of the United Nations documents are composed of capital letters combined with figures.

Département des affaires économiques et sociales

Le Département des affaires économiques et sociales du Secrétariat de l'Organisation des Nations Unies assure le lien essentiel entre les politiques adoptées au plan international dans les domaines économique, social et écologique et les mesures prises au plan national. Il mène ses activités dans trois grands domaines interdépendants : i) il compile, produit et analyse une grande variété de données et d'informations économiques, sociales et écologiques dont les États Membres de l'ONU tirent parti pour examiner les problèmes communs et faire le point sur les possibilités d'action; (ii) il facilite les négociations que les États Membres mènent dans un grand nombre d'organes intergouvernementaux sur les moyens d'action à employer conjointement pour faire face aux problèmes mondiaux existants ou naissants; et (iii) il aide les gouvernements intéressés à traduire les orientations politiques établies lors des conférences et sommets de l'ONU en programmes nationaux et contribue à renforcer les capacités des pays en leur apportant une assistance technique.

Note

Les appellations employées dans la présente publication et la présentation de données qui y figurent n'impliquent, de la part du Secrétariat de l'Organisation des Nations Unies, aucune prise de position quant au statut juridique des pays, territoires, villes ou zones, ou de leurs autorités, ni quant au tracé de leurs frontières ou limites.

En règle générale, les statistiques contenues dans la présente publication couvrent pour la période jusqu'à 2013 ou 2014 et sont celles dont disposait le Secrétariat de l'Organisation des Nations Unies jusqu'à novembre 2015. Elles reflètent donc la nomenclature de pays en vigueur à l'époque.

Le terme « pays », tel qu'il est utilisé dans la présente publication peut également désigner des territoires ou des zones.

Les appellations « développées » et « en développement » qui figurent dans certains tableaux sont employées à des fins exclusivement statistiques et n'expriment pas nécessairement un jugement quant au niveau de développement atteint par tel pays ou telle région.

Les cotes des documents de l'Organisation des Nations Unies se composent de lettres majuscules et de chiffres.

Preface

The 2013 United Nations *Statistical Yearbook* is the fifty-eighth issue of the publication, prepared by the Statistics Division of the Department of Economic and Social Affairs. Ever since the compilation of data for the *Statistical Yearbook* series was initiated in 1948, it has consistently provided a wide range of internationally available statistics on social and economic conditions and activities at the national, regional and world levels.

The tables include series covering an appropriate historical period, depending upon data availability and space constraints, for as many countries, territories and statistical areas of the world as available. The tables generally cover the period up to 2013 or 2014.

The *Yearbook* tables are based on data which have been compiled by the Statistics Division mainly from official national and international sources as these are more authoritative and comprehensive, more generally available as time series and more comparable among countries than other sources. These sources include the United Nations Statistics Division in the fields of national accounts, industry, energy and international trade, the United Nations Statistics Division and Population Division in the field of demographic statistics, and over 20 offices of the United Nations system and international organizations in other specialized fields. In some cases, official sources have been supplemented by other sources and estimates, where these have been subjected to professional scrutiny and debate and are consistent with other independent sources.

The United Nations agencies and other international, national and specialized organizations which furnished data are listed under “Source” at the end each table. Acknowledgement is gratefully made for their generous and valuable cooperation in continually providing data.

After the first table which presents key world aggregates and totals, the *Yearbook* is organized in three parts as follows; part one, relating to population and social topics; part two, relating to economic activity; and part three relating to energy, environment and infrastructure. The tables in the three parts are presented mainly by countries or areas, and world and regional aggregates are shown where available.

The four annexes contain information on country and area nomenclature (annex I), summary technical notes on statistical definitions, methods and sources for all tables of the *Yearbook* (annex II), the conversion coefficients and factors used in certain tables (annex III), and a list of those tables which were added, omitted or discontinued since the last issue of the *Yearbook* (annex IV).

The *Statistical Yearbook* is prepared by the Statistical Dissemination Section, Statistical Services Branch of the Statistics Division, Department of Economic and Social Affairs of the United Nations Secretariat. The programme manager is Matthias Reister and the chief editor is Ian Rutherford. They are assisted by David Carter, Anuradha Chimata and Aida Diawara. Bogdan Dragovic provided IT support.

Comments on the present *Yearbook* and its future evolution are welcome. They may be sent via e-mail to statistics@un.org or to the United Nations Statistics Division, Statistical Dissemination Section, New York, NY 10017, USA.

Préface

L'Annuaire statistique des Nations Unies 2013 est la cinquante-huitième édition de cette publication, préparée par la Division de statistique du Département des affaires économiques et sociales. Depuis son instauration en 1948 comme outil de compilation des données statistiques internationales, *l'Annuaire statistique* s'efforce de constamment diffuser un large éventail de statistiques disponibles sur les activités et conditions économiques et sociales, aux niveaux national, régional et mondial.

Les tableaux présentent des séries qui couvrent une période historique appropriée, en fonction de la disponibilité des données et des contraintes d'espace, pour autant de pays, territoires et zones statistiques du monde comme disponibles. Les tableaux couvrent généralement la période jusqu'à 2013 ou 2014.

Les tableaux de *l'Annuaire* sont construits essentiellement à partir des données compilées par la Division de statistique et provenant de sources officielles, nationales et internationales; c'est en effet la meilleure source si l'on veut des données fiables, complètes et comparables, et si l'on a besoin de séries chronologiques. Ces sources sont: la Division de statistique du Secrétariat de l'Organisation des Nations Unies pour ce qui concerne la comptabilité nationale, l'industrie, l'énergie et le commerce extérieur, la Division de statistique et la Division de la population du Secrétariat de l'Organisation des Nations Unies pour les statistiques démographiques; et plus de 20 bureaux du système des Nations Unies et d'organisations internationales pour les autres domaines spécialisés. Dans quelques cas, les données officielles sont complétées par des informations et des estimations provenant d'autres sources qui ont été examinées par des spécialistes et confirmées par des sources indépendantes.

Les institutions spécialisées des Nations Unies et les autres organisations internationales, nationales et spécialisées qui ont fourni des données sont énumérées dans la "Source" sur chaque tableau. Les auteurs de *l'Annuaire statistique* les remercient de leur précieuse et généreuse collaboration.

Après le premier tableau qui fournit les principaux agrégats et totaux au niveau mondial, *l'Annuaire* est groupés en trois parties. La première partie est consacrée à la population et aux questions sociales, la deuxième est consacrée à l'activité économique, et la dernière est consacrée à l'énergie, environnement et infrastructures. Dans ces trois parties, les tableaux sont généralement présentés par pays ou régions, mais les agrégats mondiaux ou régionaux sont indiqués si disponibles.

Les quatre annexes donnent des renseignements sur la nomenclature des pays et des zones (annexe I), des notes récapitulatives sur les définitions, méthodes statistiques et techniques utilisées dans les sources de chaque tableau de *l'Annuaire* (annexe II), ainsi que sur les coefficients et facteurs de conversion employés dans les différents tableaux (annexe III), enfin une liste de nouveaux tableaux, de tableaux omis ou supprimés depuis la dernière édition est disponible (annexe IV).

L'Annuaire statistique est préparé par la Section de la diffusion statistique, Service des statistiques de services de la Division de statistique, Département des affaires économiques et sociales du Secrétariat de l'Organisation des Nations Unies. La responsable du programme est Matthias Reister, et le rédacteur en chef est Ian Rutherford. Ils sont secondés par David Carter, Anuradha Chimata et Aida Diawara. Bogdan Dragovic est responsable du support en informatique.

Les observations sur la présente édition de *l'Annuaire* et les suggestions de modification pour l'avenir seront reçues avec intérêt. Elles peuvent être envoyées par message électronique à statistics@un.org, ou adressées à la Division de statistique des Nations Unies, Section de la diffusion statistique, New York, NY 10017 (États-Unis d'Amérique).

Explanatory notes

Symbols and conventions used in the tables

- . A point is used to indicate decimals.
- A hyphen between years, for example, 2013-2014, indicates the full period involved, including the beginning and end
- / A slash indicates a financial year, school year or crop year, for example 2013/14.
- ... Data are not available or not applicable; including for reasons of confidentiality, for example in commodity production.
- * Data are provisional, estimated or include a major revision.
- # Marked break in the time series.
- 0 Negligible or less than half of the unit used.

A space is used as a thousands separator, for example 1 000 is one thousand. Subtotals and percentages in the tables do not necessarily add to totals because of rounding.

Country notes and nomenclature

As a general rule, the data presented in the *Yearbook* relate to a given country or area as described in the complete list of countries and territories, see annex I.

References to statistical sources and methods in tables

For brevity the *Yearbook* omits specific information on source or methodology present in the original source for individual data points, and when a data point is estimated no distinction is made between whether the estimation was done by the international, national or specialized organization. Information on the original source are given at the end of each table or described in more detail in the technical notes to the tables, see annex II.

Units of measurement

The metric system of weights and measures has been employed throughout the *Statistical Yearbook*. For conversion coefficients and factors, see annex III.

Notes explicatives

Signes et conventions employés dans les tableaux

- . Les décimales sont précédées d'un point.
- Un tiret entre des années, par exemple "2013-2014", indique que la période est embrassée dans sa totalité, y compris la première et la dernière année.
- / Une barre oblique renvoie à un exercice financier, à une année scolaire ou à une campagne agricole, par exemple
- ... Données non disponibles ou non applicables, y compris pour des raisons de confidentialité, par exemple dans la production de marchandises.
- * Données provisoire, estimatif ou avec une révision majeure.
- # Discontinuité notable dans la série chronologique.
- 0 Négligeable ou inférieur à la moitié de l'unité employée.

Le séparateur utilisé pour les milliers est l'espace : par exemple, 1 000 correspond à un millier. Les chiffres étant arrondis, les sous-totaux ou pourcentages ne correspondent pas toujours à la somme exacte des éléments figurant dans les tableaux.

Notes sur les pays et nomenclature

En règle générale, les données renvoient au pays ou zone en question que décrite dans la liste complète des pays et territoires figure à l'annexe I.

Références à des sources et des méthodes statistiques dans les tableaux

Par souci de concision l'Annuaire omet une information spécifique sur la source ou la méthodologie présente dans la source originale pour les points de données individuels, et quand un point de données est estimé aucune distinction n'est faite entre savoir si l'estimation a été faite par l'organisation internationale, nationale ou spécialisée. Information sur la source d'origine sont donnés à la fin de chaque tableau ou décrit plus en détail dans les notes techniques au tableau, voir annexe II.

Unités de mesure

Le système métrique de poids et mesures a été utilisé dans tout l'*Annuaire statistique*. On trouvera à l'annexe III les coefficients et facteurs de conversion.

Introduction

The 2013 United Nations *Statistical Yearbook* is the fifty-eighth issue of this publication, prepared by the Statistics Division, Department of Economic and Social Affairs, of the United Nations Secretariat. The tables include series covering an appropriate historical period, depending upon data availability (as of 30 November 2015) and space constraints, for as many countries, territories and statistical areas of the world as available. The tables generally cover the period up to 2013 or 2014.

Objective and content of the Statistical Yearbook

The main purpose of the *Statistical Yearbook* is to provide in a single volume a comprehensive compilation of internationally available statistics on social and economic conditions and activities, at world, regional and national levels, for an appropriate historical period.

Most of the statistics presented in the *Yearbook* are extracted from more detailed, specialized databases prepared by the Statistics Division and by many other international statistical services. Thus, while the specialized databases concentrate on monitoring topics and trends in particular social and economic fields, the *Statistical Yearbook* tables aim to provide data for a more comprehensive, overall description of social and economic structures, conditions, changes and activities. The objective has been to collect, systematize, coordinate and present in a consistent way the most essential components of comparable statistical information which can give a broad picture of social and economic processes.

The content of the *Statistical Yearbook* is planned to serve a general readership. The *Yearbook* endeavours to provide information for various bodies of the United Nations system as well as for other international organizations, governments and non-governmental organizations, national statistical, economic and social policy bodies, scientific and educational institutions, libraries and the public. Data published in the *Statistical Yearbook* may also be of interest to companies and enterprises and to agencies engaged in market research. The *Statistical Yearbook* thus provides information on a wide range of social and economic issues which are of concern in the United Nations system and among the governments and peoples of the world. A particular value of the *Yearbook* is that it facilitates meaningful analysis of issues by systematizing and coordinating the data across many fields and shedding light on such interrelated issues as:

- General economic growth and related economic conditions;
- Gender equality;
- Population by sex and rate of increase, surface area and density;
- Unemployment, inflation and prices;
- Energy production and consumption and the development of new energy sources;
- Expansion of trade;
- The financial situation of countries;
- Education, training and eradication of illiteracy;
- Improvement in general living conditions;
- Pollution and protection of the environment;
- Assistance provided to developing countries for social and economic development purposes.

Organization of the Yearbook

After the first table which presents key world aggregates and totals, the tables of the *Yearbook* are grouped into three parts as follows:

- Part One: Population and Social Statistics (chapters II-V: tables 2-12);
- Part Two: Economic Activity (chapters VI-XII: tables 13-35);
- Part Three: Energy, environment and infrastructure (chapters XIII-XVIII: tables 36-50).

The first table provides a summary picture of development at the global level. More specific and detailed information for analysis concerning regions, individual countries or areas are presented in the three thematic parts.

Part One, Population and Social Statistics, comprises 11 tables which contain more detailed statistical series on population, gender, education and health.

Part Two, Economic Activity, comprises 23 tables of which; 13 provide data on national accounts, finance, labour market, price and production indices; and 10 provide data on production in the major branches of the economy (using, in general, the International Standard Industrial Classification, ISIC), namely agriculture, hunting, forestry and fishing, manufacturing and on international merchandise trade. Consumption data are combined with the production data in tables on specific commodities, where available.

Part Three, Energy, environment and infrastructure, comprises 15 tables on energy, environment, science and technology, communication, international tourism and transport and development assistance.

Annexes and regional groupings of countries or areas

The annexes to the *Statistical Yearbook*, and the section “Explanatory notes” preceding the Introduction, provide additional essential information on the *Yearbook’s* contents and presentation of data.

Annex I provides information on countries or areas covered in the *Yearbook* tables and on their arrangement in geographical regions and economic or other groupings. The geographical groupings shown in the *Yearbook* are generally based on continental regions unless otherwise indicated. However, strict consistency in this regard is impossible. A wide range of classifications is used for different purposes in the various international agencies and other sources of statistics for the *Yearbook*. These classifications vary in response to administrative and analytical requirements.

Annex II provide brief descriptions of major statistical concepts, definitions and classifications required for interpretation and analysis of the data.

Annex III provides detailed information on conversion coefficients and factors used in various tables, and Annex IV provides a list of tables added, omitted and discontinued in the present edition of the *Yearbook*. Some Tables do not feature in this edition of the *Yearbook* due to space limitations or an insufficient amount of new data being available. Their titles nevertheless are still listed in this Annex since it is planned that they will be published in a later issue as new data are compiled by the collecting agency and where space permits.

Data comparability, quality and relevance

The major challenge continuously facing the *Statistical Yearbook* is to present series which are as comparable across countries as the available statistics permit. Considerable efforts have already been made among the international suppliers of data and by the staff of the *Statistical Yearbook* to ensure the compatibility of various series by aligning time periods, base years, prices chosen for valuation, and so on. This is indispensable in relating various bodies of data to each other and in facilitating analysis across different sectors. Thus, for example, relating data on short-term interest rates to those on prices makes it possible to arrive at a general understanding about the inflation environment, and relating a country’s data on tourism expenditure in other countries to those on its per capita GDP provides a gauge on that country’s wealth status. In general, the data presented reflect the methodological recommendations of the United Nations Statistical Commission issued in various United Nations publications, and of other international bodies concerned with statistics. The use of international recommendations promotes international comparability of the data and ensures a degree of compatibility regarding the underlying concepts, definitions and classifications relating to different series. However, much work remains to be done in this area and, for this reason, some tables serve only as a first source of data and require further adjustment before being used for more in-depth analytical studies. While on the whole, a significant degree of comparability has been achieved in international statistics, there will remain some limitations, for a variety of reasons.

One common cause of non-comparability of economic data is different valuations of statistical aggregates such as national income, wages and salaries, output of industries and so forth. Conversion of these and similar series originally expressed in national prices into a common currency, for example into United States dollars, through the use of exchange rates, is not always satisfactory owing to frequent wide fluctuations in market rates and differences between official rates and rates which would be indicated by unofficial markets or purchasing power parities. The use of different kinds of sources for obtaining data is another cause of incomparability. This is true, for example, in the case of employment and unemployment, where data are obtained from different sources, namely household and labour force sample surveys,

establishment censuses or surveys, official estimates, social insurance statistics and employment office statistics, which are not fully comparable in many cases. Non-comparability of data may also result from differences in the institutional patterns of countries. Certain variations in social and economic organization and institutions may have an impact on the comparability of the data even if the underlying concepts and definitions are identical. These and other causes of non-comparability of the data are briefly explained in the technical note associated with each table (see Annex II).

A further set of challenges relate to timeliness, quality and relevance of the data contained in the *Yearbook*. Users generally demand the most up-to-date statistics. However, due to the different development stages of statistical capacity in different countries, data for the most recent years may only be available for a small number of countries. For a global print publication, therefore, a balance has to be struck between presenting the most updated information and satisfactory country coverage. Of course the United Nations Statistics Division's website offers greater flexibility in presenting continuously updated information and is therefore a useful complement to the annual print publication. Furthermore, as most of the information presented in this *Yearbook* is collected through specialized United Nations agencies and partners, the timeliness is continuously enhanced by improving the communication and data flow between countries and the specialized agencies on the one hand, and between the United Nations Statistics Division and the specialized agencies on the other. The development of new XML-based data transfer protocols will address this issue and is expected to make international data flows more efficient in the future.

Data quality at the international level is a function of the data quality at the national level. The United Nations Statistics Division in close cooperation with its partners among the UN agencies and the international statistical system continues to support countries' efforts to improve both the coverage and the quality of their data. Metadata, as for example reflected in the footnotes and technical notes of this publication, are an important service to the user to allow an informed assessment of the quality of the data. Given the wide variety of sources for the *Yearbook*, there is of course an equally wide variety of data formats and accompanying metadata. An important challenge for the United Nations Statistics Division and its partners for the future is to work further towards the standardization, or at least harmonization, of metadata.

A crucial challenge is to maintain the relevance of the series included in the *Yearbook*. As new policy concerns enter the developmental debate, the United Nations Statistics Division will need to introduce new series that describe concerns that have gained prominence as well as to prune data as they become outdated and continue to update the recurrent *Yearbook* series that still address those issues which are most pertinent. Often choosing the appropriate moment when the statistical information on new topics has matured sufficiently so as to be able to disseminate meaningful global data can be challenging. Furthermore, a balance has to continuously be found between the ever-increasing amount of information available for dissemination and the space limitations of the print version of the *Statistical Yearbook*. International comparability, data availability, data quality and relevance will remain the key criteria to guide the United Nations Statistics Division in its selection.

Needless to say, more can always be done to improve the *Statistical Yearbook's* scope, coverage, design, metadata and timeliness. The *Yearbook* team continually strives to improve upon each of these aspects and to make its publication as responsive as possible to its users' needs and expectations, while at the same time focusing on a manageable body of data and metadata. Since data disseminated in digital form have clear advantages over those in print, as much of the *Yearbook* information as possible will continue to be included in the Statistics Division's online databases. Please feel welcome to provide feedback and suggestions to statistics@un.org.

Introduction

L'*Annuaire statistique* des Nations Unies 2013 est la cinquante-huitième édition de cette publication, établi par la Division de statistique du Département des affaires économiques et sociales du Secrétariat de l'Organisation des Nations Unies. Les tableaux présentent des séries qui couvrent une période historique appropriée, en fonction de la disponibilité des données (à la date du 30 novembre 2015) et des contraintes d'espace, pour autant de pays, territoires et zones statistiques du monde comme disponibles. Les tableaux couvrent généralement pour la période jusqu'à 2013 ou 2014.

Objectif et contenu de l'Annuaire statistique

Le principal objectif de l'*Annuaire statistique* est de fournir en un seul volume un inventaire complet de statistiques internationales concernant la situation et les activités sociales et économiques aux niveaux mondial, régional et national, sur une période adéquate.

La plupart des données qui figurent dans l'*Annuaire statistique* proviennent de bases de données spécialisées davantage détaillées, préparées par la Division de statistique et par bien d'autres services statistiques internationaux. Tandis que les bases de données spécialisées se concentrent sur le suivi de domaines socioéconomiques particuliers, les données de l'*Annuaire* sont présentées de telle sorte qu'elles fournissent une description globale et exhaustive des structures, conditions, transformations et activités socioéconomiques. On a cherché à recueillir, systématiser, coordonner et présenter de manière cohérente les principales informations statistiques comparables, de manière à dresser un tableau général des processus socioéconomiques.

Le contenu de l'*Annuaire statistique* a été élaboré en vue d'un lectorat large. Les renseignements fournis devraient ainsi pouvoir être utilisés par les divers organismes du système des Nations Unies, mais aussi par d'autres organisations internationales, les gouvernements et les organisations non gouvernementales, les organismes nationaux de statistique et de politique économique et sociale, les institutions scientifiques et les établissements d'enseignement, les bibliothèques et les particuliers. Les données publiées dans l'*Annuaire* peuvent également intéresser les sociétés et entreprises, et les organismes spécialisés dans les études de marché. L'*Annuaire* présente des informations sur un large éventail de questions socioéconomiques liées aux préoccupations actuelles du système des Nations Unies, des gouvernements et des peuples du monde entier. Une qualité particulière de l'*Annuaire* est de faciliter une analyse approfondie de ces questions en systématisant et en articulant les données d'un domaine/secteur à l'autre, et en apportant un éclairage sur des sujets interdépendants, tels que :

- La croissance économique générale, et les conditions économiques qui lui sont liées;
- La situation de femmes;
- La population, taux d'accroissement, superficie et densité;
- Le chômage, l'inflation et les prix;
- La production et la consommation d'énergie et le développement de nouvelles sources d'énergie;
- L'expansion des échanges;
- La situation financière des pays;
- L'éducation, la formation et l'élimination de l'analphabétisme;
- L'amélioration des conditions de vie;
- La pollution et la protection de l'environnement;
- L'assistance aux pays en développement à des fins socioéconomiques.

Présentation de l'Annuaire

Après le premier tableau qui fournit les principaux agrégats et totaux au niveau mondial, l'Annuaire est groupés en trois parties comme suit:

- Première partie: Statistiques démographiques et sociales (chapitres II à V, tableaux 2 à 12)
- Deuxième partie: Activité économique (chapitres VI à XII, tableaux 13 à 35)
- Troisième partie: Energie, environnement et infrastructures (chapitres XIII à XVIII, tableaux 36 à 50)

Le premier tableau donne un aperçu du développement à l'échelon mondial, tandis que les trois autres parties contiennent des renseignements plus précis et détaillés qui se prêtent mieux à une analyse par régions, pays ou par zones. Chacune de ces trois parties est subdivisée en unités thématiques.

La première partie, intitulée “Population et statistiques sociales”, comporte 11 tableaux où figurent des séries plus détaillées concernant la population, la situation des femmes, l’éducation et la santé.

La deuxième partie, intitulée “Activité économique”, comporte 23 tableaux, 13 qui présentent des statistiques concernant les comptes nationaux, le finances, le marché du travail, les indices des prix et de la production; et 10 qui présentent des données sur la production des principales branches d’activité économique (en utilisant en général la Classification internationale type, par industrie, de toutes les branches d’activité économique): agriculture, chasse, sylviculture et pêche, industries manufacturières et au commerce international des marchandises. Les tableaux traitant de certains produits de base associent autant que possible les données relatives à la consommation aux valeurs concernant la production.

La troisième partie, intitulée “Energie, environnement et infrastructures”, comprend 15 tableaux relatifs à l’énergie, l’environnement, la science et technologie, à la communication, au tourisme et transport internationaux et à l’aide au développement.

Annexes et groupements régionaux des pays et zones

Les annexes à l’*Annuaire statistique*, et la section intitulée “Notes explicatives” qui précède l’introduction, offrent d’importantes informations complémentaires quant à la teneur et à la présentation des données figurant dans le présent ouvrage.

L’annexe I donne des renseignements sur les pays ou zones couverts par les tableaux de l’*Annuaire* et sur leur regroupement en régions géographiques et groupements économiques ou autres. Sauf indication contraire, les groupements géographiques figurant dans l’*Annuaire* sont généralement fondés sur les régions continentales, mais une présentation absolument systématique est impossible à cet égard car les diverses institutions internationales et autres sources de statistiques employées pour la confection de l’*Annuaire* emploient, selon l’objet de l’exercice, des classifications fort différentes en réponse à diverses exigences d’ordre administratif ou analytique.

L’annexe II contient les notes techniques de chaque chapitre apportent une brève description des principales notions, définitions et classifications statistiques nécessaires pour interpréter et analyser les données.

L’annexe III fournit des renseignements sur les coefficients et facteurs de conversion employés dans les différents tableaux, et l’annexe IV contient la liste de tableaux qui ont été ajoutés omis ou supprimés dans la présente édition de l’*Annuaire*. Certains tableaux ne figurent pas dans cet *Annuaire* en raison du manque d’espace ou de données nouvelles. Comme ils seront repris dans une prochaine édition à mesure que des données nouvelles seront dépouillées par l’office statistique d’origine, ses titres figurent toujours dans la table des matières.

Comparabilité, qualité et pertinence des statistiques

Le défi majeur auquel l’*Annuaire Statistique* fait continuellement face est de présenter des séries aussi comparables entre les pays que la disponibilité des statistiques le permettent. Les sources internationales de données et les auteurs de l’*Annuaire* ont réalisé des efforts considérables pour faire en sorte que diverses séries soient compatibles, en harmonisant les périodes de référence, les années de base, les prix utilisés pour les évaluations, etc. Cette démarche est indispensable si l’on veut rapprocher divers ensembles de données, et faciliter l’analyse intersectorielle de l’économie. Ainsi, lier les données concernant les taux d’intérêt à court terme à celles des prix permet d’arriver à une compréhension globale de l’environnement de l’inflation; lier les données de dépenses touristiques d’un pays dans d’autres pays à celles de son PIB par tête fournit un indicateur de la richesse de ce pays. De façon générale, les données sont présentées selon les recommandations méthodologiques formulées par la Commission de statistique des Nations Unies, et par les autres entités internationales impliquées dans les statistiques. Le respect des recommandations internationales tend non seulement à promouvoir la comparabilité internationale des données, mais elle assure également une certaine comparabilité entre les concepts, les définitions et classifications utilisés. Mais comme il reste encore beaucoup à faire dans ce domaine, les données présentées dans certains tableaux n’ont qu’une valeur indicative, et nécessiteront des ajustements plus poussés avant de pouvoir servir à des analyses approfondies. Bien que l’on soit parvenu, dans l’ensemble, à un degré de comparabilité appréciable en matière de statistiques internationales, diverses raisons expliquent que subsistent encore de nombreuses limitations.

Une cause commune de non comparabilité des données économiques réside dans la diversité des méthodes d’évaluation employées pour comptabiliser des agrégats tels que le revenu national, les salaires et traitements, la production des différentes branches d’activité industrielle, etc. Il n’est pas toujours satisfaisant de ramener la valeur des séries de ce

type—exprimée à l'origine en prix nationaux—à une monnaie commune (par exemple le dollar des États-Unis) car les taux de change du marché connaissent fréquemment de fortes fluctuations, et parce que les taux officiels ne coïncident pas avec ceux des marchés officieux ni avec les parités réelles de pouvoir d'achat. Le recours à des sources diverses pour la collecte des données est un autre facteur qui limite la comparabilité. C'est le cas, par exemple, des données d'emploi et de chômage, obtenues par des moyens aussi peu comparables que les sondages, le dépouillement des registres d'assurances sociales et les enquêtes auprès des entreprises. Dans certains cas, les données ne sont pas comparables en raison de différences entre les structures institutionnelles des pays. Des changements dans l'organisation et les institutions économiques et sociales peuvent affecter la comparabilité des données, même si les concepts et définitions sont fondamentalement identiques. Ces causes, et d'autres, de non comparabilité des données sont brièvement expliquées dans les notes techniques associée à chaque tableau (voir annexe II).

Un autre ensemble de défis à relever concerne la fraîcheur, la qualité et la pertinence des données présentées dans l'*Annuaire*. Les utilisateurs exigent généralement des données les plus récentes possibles. Toutefois, selon le niveau de développement de la capacité statistique des pays, les données pour les dernières années peuvent n'être disponibles que pour un nombre limité de pays. Dans le cadre d'une publication mondiale, un équilibre doit être trouvé entre la présentation de l'information la plus récente et une couverture géographique satisfaisante. Bien entendu, le site Internet de la Division de statistique des Nations Unies offre une plus grande flexibilité, puisqu'il propose une information actualisée au fil de l'eau, et constitue ainsi un complément utile à la publication papier annuelle. Par ailleurs, étant donné que la plupart des informations présentées dans cet *Annuaire* sont collectées parmi les agences spécialisées des Nations Unies et autres partenaires, la fraîcheur des données est continuellement améliorée, grâce à une meilleure communication et un meilleur échange de données entre les pays et les agences spécialisées d'une part, et entre la Division de statistique des Nations Unies et les agences spécialisées d'autre part. Le développement de nouveaux protocoles de transfert de données basés sur le langage XML devrait contribuer à rendre, à l'avenir, les échanges de données internationales encore plus efficaces.

La qualité des données au niveau international est fonction de la qualité des données au niveau national. La Division de statistique des Nations Unies, en étroite collaboration avec ses partenaires dans les agences de l'ONU et dans le système statistique international, continue de soutenir les efforts des pays pour améliorer à la fois la couverture et la qualité de leurs données. Des métadonnées, comme l'illustrent les notes de bas de page et les notes techniques de cette publication, constituent un important service fourni à l'utilisateur pour lui permettre d'évaluer de manière avisée la qualité des données. Étant donné la grande variété des sources de l'*Annuaire*, il y a bien entendu une non moins grande variété de formats de données et de métadonnées associées. Un important défi que la Division de statistique des Nations Unies et ses partenaires doivent relever dans le futur est d'aboutir à la standardisation, ou au moins l'harmonisation, des métadonnées.

Le défi majeur reste la constance de la pertinence des séries présentées dans l'*Annuaire*. Au fur et à mesure que de nouvelles préoccupations politiques pénètrent le débat lié au développement, la Division de statistique des Nations Unies doit introduire dans l'*Annuaire* de nouvelles séries qui leur sont liées, et, ce faisant, effectuer une coupe sombre parmi les données qui lui semblent dépassées, tout en s'assurant de continuer à actualiser les séries récurrentes de qui paraissent encore pertinentes. Souvent, choisir le moment idoine auquel les données statistiques sur de nouveaux thèmes sont suffisamment matures pour qu'elles puissent, au niveau mondial, être diffusées sans hésitation, est un défi en soi. Par ailleurs, un équilibre doit continuellement être trouvé entre le volume toujours croissant d'informations disponibles à la diffusion, et les contraintes d'espace de la version papier de l'*Annuaire* statistique. La comparabilité internationale, la disponibilité, la qualité et la pertinence des données devront rester les principaux critères à considérer par la Division de statistique des Nations Unies dans sa sélection.

Inutile de dire qu'il est toujours possible d'améliorer l'*Annuaire* statistique en ce qui concerne son champ, sa couverture, sa conception générale, ses métadonnées et sa mise à jour. L'équipe en charge de l'*Annuaire* s'évertue en permanence à améliorer chacun de ces aspects, et de faire en sorte que cette publication réponde au plus près aux besoins et aux attentes de ses utilisateurs, sans toutefois oublier de mettre l'accent sur un corpus gérable de données et de métadonnées. Puisqu'il est avéré que les données diffusées de manière digitale ont des avantages comparés à celles diffusées sur papier, autant d'informations de l'*Annuaire* que possible continueront d'être incluses dans les bases de données électroniques de la Division de statistique. L'*Annuaire* statistique garde toujours une place de choix parmi les produits de la Division de statistique comme une ressource utile pour une compréhension général de la situation sociale et économique globale. N'hésitez pas à nous faire part de vos commentaires et suggestions à statistics@un.org

Estimations de population au milieu de l'année, taux d'accroissement annuel, taux bruts de natalité et de mortalité, densité : Organisation des Nations Unies, Division pour la population, New York, *Perspectives de la population mondiale: révision de 2015*. Superficie: Organisation des Nations Unies, Division de statistique, New York, *Annuaire démographique 2013*.

- 1 Including Christmas Island, Cocos (Keeling) Islands and Norfolk Island.
- 2 Including Nagorno-Karabakh.
- 3 Data updated according to "Superintendencia Agraria". Interior waters correspond to natural or artificial bodies of water or snow.
- 4 Refers to Guernsey and Jersey.
- 5 For statistical purposes, the data for China do not include those for the Hong Kong Special Administrative Region (Hong Kong SAR), Macao Special Administrative Region (Macao SAR) and Taiwan Province of China.
- 6 Excluding Niue, shown separately, which is part of Cook Islands, but because of remoteness is administered separately.

- 1 Y compris les îles Christmas, Cocos (Keeling) et Norfolk.
- 2 Y compris le Haut-Karabakh.
- 3 Données actualisées d'après la « Superintendencia Agraria ». Les eaux intérieures correspondent aux étendues d'eau naturelles ou artificielles et aux étendues neigeuses.
- 4 Se rapporte à Guernsey et Jersey.
- 5 Pour la présentation des statistiques, les données pour la Chine ne comprennent pas la Région Administrative Spéciale de Hong Kong (Hong Kong RAS), la Région Administrative Spéciale de Macao (Macao RAS) et la province de Taiwan.
- 6 Non compris Niue, qui fait l'objet d'une rubrique distincte et qui fait partie des îles Cook, mais qui, en raison de son éloignement, est administrée séparément.

2

Population, rate of increase, birth and death rates, surface area and density (*continued*)Population, taux d'accroissement, taux de natalité, taux de mortalité, superficie et densité (*suite*)

| | | | |
|----|---|----|--|
| 7 | Refers to the whole country. | 7 | Ensemble du pays. |
| 8 | The total surface is 21 040.79 square kilometres, without taking into account the last ruling of The Hague. | 8 | La superficie totale est égale à 21 040.79 km ² , sans tenir compte de la dernière décision de la Haye. |
| 9 | Including Åland Islands. | 9 | Y compris les Îles d'Åland. |
| 10 | Excluding Åland Islands. | 10 | Non compris les Îles d'Åland. |
| 11 | Including Abkhazia and South Ossetia. | 11 | Y compris l'Abkhazie et l'Ossétie du Sud. |
| 12 | Including Saint-Barthélemy and Saint-Martin (French part). | 12 | Y compris Saint Barthélemy et Saint Martin. |
| 13 | Surface area is 0.44 Km ² . | 13 | Superficie: 0,44 Km ² |
| 14 | Land area only. | 14 | La superficie des terres seulement. |
| 15 | Data refer to 1 October 2007. | 15 | Les données se réfèrent au 1er octobre 2007. |
| 16 | Land area only. Excluding 84 square km of uninhabited islands. | 16 | La superficie des terres seulement. Exclut des îles inhabitées d'une superficie de 84 kilomètres carrés. |
| 17 | Including Sabah and Sarawak. | 17 | Y compris Sabah et Sarawak. |
| 18 | Including Agalega, Rodrigues and Saint Brandon. | 18 | Y compris Agalega, Rodrigues et Saint Brandon. |
| 19 | Excludes the islands of St. Brandon and Agalega. | 19 | Non compris les îles St. Brandon et Agalega. |
| 20 | Including Svalbard and Jan Mayen Islands. | 20 | Y compris îles Svalbard et Jan Mayen. |
| 21 | Including Transnistria. | 21 | Y compris la Transnistrie. |
| 22 | Including Ascension and Tristan da Cunha. | 22 | Y compris Ascension et Tristan da Cunha. |
| 23 | Refers to habitable area. Excludes St. Lucia's Forest Reserve. | 23 | S'applique à la zone habitable. Exclut la réserve forestière de Sainte-Lucie. |
| 24 | Surface area is based on the 2002 population and housing census. | 24 | La superficie est fondée sur les données provenant du recensement de la population et du logement de 2002. |
| 25 | Including Kosovo. | 25 | Y compris Kosovo. |
| 26 | The land area of Singapore comprises the mainland and other islands. | 26 | La superficie terrestre de Singapour comprend l'île principale et les autres îles. |
| 27 | Excluding inland water. | 27 | Exception faite des eaux intérieures. |
| 28 | Including Canary Islands, Ceuta and Melilla. | 28 | Y compris les Iles Canaries, Ceuta et Melilla. |
| 29 | Including East Jerusalem. | 29 | Y compris Jérusalem-Est. |
| 30 | Including low water level for all islands (area to shoreline). | 30 | Incluent le niveau de basses eaux pour toutes les îles. |
| 31 | Including Crimea. | 31 | Y compris Crimee |
| 32 | Comprising the Northern Region (former Saguia el Hamra) and Southern Region (former Rio de Oro). | 32 | Comprend la région septentrionale (ancien Saguia el Hamra) et la région méridionale (ancien Rio de Oro). |

3

Selected indicators of life expectancy, childbearing, age dependency and mortality
Sélection d'indicateurs de l'espérance de vie, de la maternité, du ratio de dépendance démographique et de la mortalité

Life expectancy, total fertility rate, total dependency ratio and infant mortality rates: United Nations Population Division, *World Population Prospects: The 2015 Revision*. Supplemented by data from the United Nations Statistics Division, New York, *Demographic Yearbook 2013* and *Secretariat for the Pacific Community (SPC)* for small countries or areas. Maternal mortality: World Health Organization (WHO), the United Nations Children's Fund (UNICEF), the United Nations Population Fund (UNFPA), the World Bank and the United Nations Population Division, *Trends in Maternal Mortality 1990-2015*.

&

The figures are estimated by the international agency, when corresponding country data on a specific year or set of years are not available, or when multiple sources exist, or there are issues of data quality. Estimates are based on national data, such as surveys or administrative records, or other sources but on the same variable being estimated.

&& Unless otherwise footnoted;

Data for the year 2010 represents a range 2005 – 2010.
Data for the year 2015 represents a range 2010 – 2015.

Espérance de vie à la naissance, taux de fécondité, rapport de dépendance et taux de mortalité infantile: Organisation des Nations Unies, Division pour la population, New York, *Perspectives de la population mondiale: révision de 2015*. Complétées par des données de l'Organisation des Nations Unies, Division de statistique, New York, *Annuaire démographique 2013* et Secrétariat de la Communauté du Pacifique (CPS) pour petits pays ou zones. Taux de mortalité maternelle : Organisation mondiale de la Santé (OMS), le Fonds des Nations Unies pour l'enfance (UNICEF), le Fonds des Nations Unies pour la population (UNFPA), la Banque mondiale et la Division des Nations Unies pour la population, *Les tendances de la mortalité maternelle 1990-2015*.

&

Les chiffres sont estimés par l'agence internationale, lorsque les données de pays correspondant sur une année spécifique ou un ensemble d'années ne sont pas disponible, ou lorsque plusieurs sources existent, ou il ya des problèmes de qualité des données. Les estimations sont basées sur des données nationales, comme les enquêtes ou dossiers administratifs, ou d'autres sources, mais sur le même être variable estimée.

|----|--|----|--|
| 1 | Including Bermuda, Greenland, and Saint Pierre and Miquelon. | 1 | Y compris Bermudes, Groenland, é Saint-Pierre-et-Miquelon. |
| 2 | Data refers to 2006. | 2 | Les données se réfèrent à 2006. |
| 3 | Including armed forces stationed in the area. | 3 | Y compris les militaires en garnison sur le territoire. |
| 4 | Data refers to the years 2000 - 2002. | 4 | Les données se réfèrent aux années 2000 - 2002. |
| 5 | Including Christmas Island, Cocos (Keeling) Islands and Norfolk Island. | 5 | Y compris les îles Christmas, Cocos (Keeling) et Norfolk. |
| 6 | Including Nagorno-Karabakh. | 6 | Y compris le Haut-Karabakh. |
| 7 | Data are based on a small number of deaths. | 7 | Les données sont basées sur un nombre limité de décès. |
| 8 | Data refers to 2013. | 8 | Les données se réfèrent à 2013. |
| 9 | Refers to Guernsey and Jersey. | 9 | Se rapporte à Guernsey et Jersey. |
| 10 | For statistical purposes, the data for China do not include those for the Hong Kong Special Administrative Region (Hong Kong SAR), Macao Special Administrative Region (Macao SAR) and Taiwan Province of China. | 10 | Pour la présentation des statistiques, les données pour la Chine ne comprennent pas la Région Administrative Spéciale de Hong Kong (Hong Kong RAS), la Région Administrative Spéciale de Macao (Macao RAS) et la province de Taiwan. |
| 11 | Data refers to the years 2006 - 2012. | 11 | Les données se réfèrent aux années 2006 - 2012. |
| 12 | Data refers to 2011. | 12 | Les données se réfèrent à 2011. |
| 13 | Refers to the whole country. | 13 | Ensemble du pays. |
| 14 | Including Åland Islands. | 14 | Y compris les Îles d'Åland. |
| 15 | Including Abkhazia and South Ossetia. | 15 | Y compris l'Abkhazie et l'Ossétie du Sud. |
| 16 | Data refers to the years 2008 - 2012. | 16 | Les données se réfèrent aux années 2008 - 2012. |
| 17 | Including Saint-Barthélemy and Saint-Martin (French part). | 17 | Y compris Saint Barthélemy et Saint Martin. |
| 18 | Including Sabah and Sarawak. | 18 | Y compris Sabah et Sarawak. |
| 19 | Data refers to 2010. | 19 | Les données se réfèrent à 2010. |
| 20 | Including Agalega, Rodrigues and Saint Brandon. | 20 | Y compris Agalega, Rodrigues et Saint Brandon. |
| 21 | Data refers to the years 2007 - 2011. | 21 | Les données se réfèrent aux années 2007 - 2011. |
| 22 | Data refers to the years 2009 - 2011. | 22 | Les données se réfèrent aux années 2009 - 2011. |
| 23 | Data calculated on ages 0-15 years and 60 years and older as a ratio of 16-59 years old. | 23 | Les données exprimées par un ratio de 16 à 59 ans, sont calculées à partir des âges de 0 à 15 ans et de 60 ans et plus. |
| 24 | Data refers to the years 2006 - 2011. | 24 | Les données se réfèrent aux années 2006 - 2011. |
| 25 | Data refers to the years 2006 - 2008. | 25 | Les données se réfèrent aux années 2006 - 2008. |
| 26 | Including Svalbard and Jan Mayen Islands. | 26 | Y compris îles Svalbard et Jan Mayen. |
| 27 | Data refers to the years 2001 - 2005. | 27 | Les données se réfèrent aux années 2001 - 2005. |
| 28 | Data calculated on ages 0-17 years and 65 years and older as a ratio of 18-64 years old. | 28 | Les données exprimées par un ratio de 18 à 64 ans, sont calculées à partir des âges de 0 à 17 ans et de 65 ans et plus. |
| 29 | Including Transnistria. | 29 | Y compris la Transnistrie. |
| 30 | Data refers to the years 2003 - 2012. | 30 | Les données se réfèrent aux années 2003 - 2012. |
| 31 | Data calculated on ages 0-15 years and 66 years and older as a ratio of 16-65 years old. | 31 | Les données exprimées par un ratio de 16 à 65 ans, sont calculées à partir des âges de 0 à 15 ans et de 66 ans et plus. |
| 32 | Including Kosovo. | 32 | Y compris Kosovo. |
| 33 | Including Canary Islands, Ceuta and Melilla. | 33 | Y compris les Iles Canaries, Ceuta et Melilla. |
| 34 | Including East Jerusalem. | 34 | Y compris Jérusalem-Est. |
| 35 | Data refers to the years 2000 - 2003. | 35 | Les données se réfèrent aux années 2000 - 2003. |
| 36 | Data refers to 2009. | 36 | Les données se réfèrent à 2009. |
| 37 | Including Crimea. | 37 | Y compris Crimee |
| 38 | Data refers to the years 2004 - 2012. | 38 | Les données se réfèrent aux années 2004 - 2012. |

|--|--|
| <p>1 This figure excludes the 45 reserved seats for women which were not yet filled in January 2009.</p> <p>2 The 2008 Constitution provides that the National Congress shall be replaced by a 124-member National Assembly. Elections to that body are due to take place on 26 April 2009. During the transitional period, a Legislative and Oversight Commission, comprising the members of the Constituent Assembly, assumes the legislative and oversight functions. The date refers to the date when the Commission held its first session.</p> <p>3 Figures correspond to the results of elections to the Lower House completed in January 2012. Elections to the Upper House will be completed in early 2012.</p> <p>4 No woman candidate was elected in the 2008 elections. Two women were appointed to the 16-member cabinet sworn in June 2008. As cabinet ministers also sit in parliament, there are two women out of a total of 65 members.</p> <p>5 Figure excludes 11 members yet to be sworn in.</p> <p>6 The figures on the distribution of seats do not include the 36 special rotating delegates appointed on an ad hoc basis, and all percentages given are therefore calculated on the basis of the 54 permanent seats.</p> <p>7 No women were elected in 2008, however one woman was appointed to the Cabinet. As cabinet ministers also sit in parliament, there is one woman out of a total of 32 members.</p> <p>8 The total refers to all voting members of the House.</p> | <p>1 Ce chiffre exclut les 45 sièges réservés aux femmes toujours vacants en janvier 2009.</p> <p>2 Conformément à la Constitution de 2008, le Congrès national est remplacé par une Assemblée nationale dotée de 124 sièges. Les élections à cette instance doivent avoir lieu le 26 avril 2009. Durant la période de transition, la Commission législative et de contrôle, composée des membres de l'Assemblée constituante, exerce les fonctions législatives et de contrôle. La date renvoie à la date à laquelle la Commission a tenu sa première séance.</p> <p>3 Les chiffres correspondent aux résultats des élections à la Chambre basse, conclues en janvier 2012. Les élections à la Chambre haute s'achèveront dans les premiers mois de 2012.</p> <p>4 Aucune femme n'a été élue en 2008. Deux femmes ont été nommées parmi les 16 membres du gouvernement qui ont prêté serment en juin 2008. Les ministres siégeant également au Parlement, le Parlement compte donc deux femmes sur un total de 65 membres.</p> <p>5 Ce chiffre ne tient pas compte de 11 membres qui n'avaient pas encore été assermentés.</p> <p>6 Les chiffres sur la répartition des sièges ne comprennent pas les 36 représentants spéciaux nommés à des postes ad hoc pourvus par roulement, et tous les pourcentages indiqués ont donc été calculés sur la base des 54 sièges permanents.</p> <p>7 Aucune femme n'a été élue en 2008. Cependant, une femme a été nommée au Gouvernement. Les ministres siégeant également au Parlement, le Parlement compte donc une femme sur un total de 32 membres.</p> <p>8 le total correspond aux membres de la Chambre qui ont le droit de vote.</p> |

† Data relate to the calendar year in which the academic year ends.

† Les données se réfèrent à l'année civile durant laquelle l'année scolaire se termine.

1 For statistical purposes, the data for China do not include those for the Hong Kong Special Administrative Region (Hong Kong SAR) and Macao Special Administrative Region (Macao SAR).

1 Pour la présentation des statistiques, les données pour la Chine ne comprennent pas la Région Administrative Spéciale de Hong Kong (Hong Kong RAS) et la Région Administrative Spéciale de Macao (Macao RAS).

11

Health Personnel

Number of health workers and workforce density (per 1000 population)

Personnel de santé

Personnel de santé et densité (pour 1000 habitants)

Part Two

Economic activity

- Chapter VI National accounts (tables 13 – 15)
- Chapter VII Finance (tables 16 – 19)
- Chapter VII Labour market (tables 20 and 21)
- Chapter IX Price and production indices (tables 22 – 25)
- Chapter X Agriculture, forestry and fishing (tables 26 – 28)
- Chapter XI Manufacturing (tables 29 -33)
- Chapter XII International merchandise trade (tables 34 and 35)

Deuxième partie

Activité économique

- Chapitre VI Compatibilités nationales (tableaux 13 – 15)
- Chapitre VII Finances (tableaux 16 – 19)
- Chapitre VII Marché du travail (tableaux 20 et 21)
- Chapitre IX Indices des prix et de la production (tableaux 22 – 25)
- Chapitre X Agriculture, forêts et pêche (tableaux 26 – 28)
- Chapitre XI Industries manufacturières (tableaux 29 -33)
- Chapitre XII Commerce international des marchandises (tableaux 34 et 35)

13

Gross domestic product and gross domestic product per capita

In millions of US dollars at current and constant 2005 prices; per capita US dollars; real rates of growth

Produit intérieur brut et produit intérieur brut par habitant

En millions de dollars É.-U. aux prix courants et constants de 2005; par habitant en dollars É.U.; taux de croissance réels

- 1 For statistical purposes, the data for China do not include those for the Hong Kong Special Administrative Region (Hong Kong SAR), Macao Special Administrative Region (Macao SAR) and Taiwan Province of China.
- 2 Excluding northern Cyprus.
- 3 Including Guadeloupe, Martinique, Réunion and French Guiana.
- 4 Including Western Sahara.
- 5 Excluding Kosovo and Metohija.
- 6 Tanzania mainland only.

- 1 Pour la présentation des statistiques, les données pour la Chine ne comprennent pas la Région Administrative Spéciale de Hong Kong (Hong Kong RAS), la Région Administrative Spéciale de Macao (Macao RAS) et la province de Taiwan.
- 2 Chypre du nord non compris.
- 3 Y compris Guadeloupe, Martinique, Réunion et Guyane française.
- 4 Y compris les données de Sahara occidental.
- 5 Non compris Kosovo et Metohija.
- 6 Tanzanie continentale seulement.

Unless otherwise footnoted the detailed series presented in this table can be represented in ISIC as follows;

À l'exception des séries faisant l'objet de notes en bas de page, les séries détaillées de ce tableau sont classifiées dans la CITI comme suit:

| Series name in the table Nom de la série dans le tableau | ISIC / CITI | | |
|---|--------------------|------------------|---------------------|
| | Revision/ révision | Section/ section | Division/ divisions |
| Food, beverages and tobacco | 4 | C | 10 – 12 |
| Aliments, boissons et tabac | 3 | D | 15 – 16 |
| Textiles, wearing apparel, leather | 4 | C | 13 – 15 |
| Textiles, habillement, cuir | 3 | D | 17 - 19 |
| Chemicals, petroleum, rubber, plastics | 4 | C | 19 – 22 |
| Chimiques, pétrol., caoutchouc, plastiques | 3 | D | 23 – 25 |
| Basic metals | 4 | C | 24 |
| Metaux de base | 3 | D | 27 |
| Metal products and machinery | 4 | C | 25 – 30 |
| Fabrication des métaux et machines | 3 | D | 28 – 35 |
| Metal products / Fabrication des métaux | 3 | D | 28 |
| Machinery / Fabrication des machines | 3 | D | 29 – 35 |

- 1 Including basic metals.
- 2 The indices are based on ISIC Rev. 3.
- 3 Data refers to electricity only.
- 4 Excluding petroleum products.
- 5 Twelve months ending 30 June of the year stated.
- 6 Data refers to electricity and gas only.
- 7 Excluding pharmaceutical products.
- 8 Data refers to electricity and water only.
- 9 Data refers to wearing apparel only.
- 10 Data refers to chemicals and chemical products only.
- 11 Data refers to electrical machinery and apparatus n.e.c.
- 12 Data refers to textiles and wearing apparel only.
- 13 Country data supplemented with data from the Observatoire Economique et Statistique d'Afrique Subsaharienne (Afristat).
- 14 Data refers to fabricated metal products only.
- 15 Data refers to electricity, gas, steam and hot water supply only.
- 16 Excluding water and waste management.
- 17 Data refers to chemicals and pharmaceutical products only.
- 18 Data refers to manufacturing and utilities only.
- 19 Data refers to textiles only.
- 20 Data refers to fabricated metals, machinery and equipment n.e.c. only.
- 21 Excluding computer, electronic and optical products.
- 22 Data refers to food and beverages only.
- 23 For government controlled areas.
- 24 Data refers to fabricated metal products; machinery and equipment, n.e.c.; electrical machinery and apparatus, n.e.c.; and motor vehicles only.
- 25 Data refers to electricity, steam and air conditioning supply only.
- 26 Excluding textiles.
- 27 Excluding computer, electronic and optical products; and electrical equipment.
- 28 Excludes the Overseas Departments (French Guiana, Guadeloupe, Martinique, Mayotte and Réunion).
- 29 Data refers to petroleum products, chemicals and chemical products only.

- 1 Y compris les métaux de base.
- 2 Les indices sont basés sur la CITI Rev. 3.
- 3 Les données ne concernent que l'électricité.
- 4 Non compris produits pétroliers.
- 5 Période de douze mois finissant le 30 juin de l'année indiquée.
- 6 Les données ne concernent que l'électricité et le gaz.
- 7 À l'exclusion des produits pharmaceutiques.
- 8 Les données portent exclusivement sur l'électricité et l'eau.
- 9 Les données ne concernent que les articles d'habillement.
- 10 Les données ne concernent que les industries chimiques et de produits chimiques.
- 11 Les données ne concernent que les machines et appareils électriques.
- 12 Les données ne concernent que les textiles et habillement.
- 13 Les données nationales complétées par des données de l'Observatoire Economique et Statistique d'Afrique Subsaharienne (Afristat).
- 14 Les données ne concernent que les produits métalliques ouvrés.
- 15 Les données ne concernent que la distribution d'électricité, de gaz, de vapeur et d'eau chaude.
- 16 À l'exclusion de la gestion de l'eau et des déchets. Y compris les produits pharmaceutiques.
- 17 Y compris les produits pharmaceutiques.
- 18 Les données portent exclusivement sur le secteur manufacturier et les services publics.
- 19 Les données ne concernent que les textiles.
- 20 Les données ne concernent que les produits métalliques ouvrés, les machines et le matériel, n.c.a..
- 21 À l'exclusion des produits informatiques, électroniques et optiques.
- 22 Les données ne concernent que les denrées alimentaires et les boissons.
- 23 Pour les zones contrôlées par le gouvernement.
- 24 Les données ne concernent que les produits métalliques ouvrés, les machines et le matériel, les machines et appareils électriques et les véhicules à moteur.
- 25 Les données ne concernent que la distribution d'électricité, de vapeur et de climatisation.
- 26 À l'exclusion des textiles.
- 27 À l'exclusion des produits informatiques, électroniques et optiques et des appareils électriques.
- 28 Non compris les départements d'outre-mer (Guyane française, Guadeloupe, Martinique, Mayotte et Réunion).
- 29 Les données ne concernent que les produits pétroliers et les industries chimiques et de produits chimiques.

|----|--|----|--|
| 30 | Data refers to machinery and equipment n.e.c.; and manufacturing n.e.c. only. | 30 | Les données ne concernent que les machines et le matériel, les industries manufacturières n.c.a. |
| 31 | Twelve months beginning 1 April of the year stated. | 31 | Période de 12 mois commençant le 1er avril de l'année indiquée. |
| 32 | Data refers to manufacture of all metal products, machinery and transport equipment only; excluding office, accounting and computing machinery machinery. | 32 | Les données ne concernent que la fabrication de tous les produits métalliques, des machines et du matériel de transport, à l'exclusion des machines de bureau, des machines comptables et du matériel informatique. |
| 33 | Data refers to manufacture of all metal products, machinery and transport equipment only; excluding medical, precision and optical instruments, watches and clocks. | 33 | Les données ne concernent que la fabrication de tous les produits métalliques, des machines et du matériel de transport, à l'exclusion des instruments médicaux, de précision et d'optique, des montres et des horloges. |
| 34 | Data refers to mining and manufacturing. | 34 | Les données portent sur l'exploitation minière et les industries de transformation. |
| 35 | Data refers to fabricated metal products; machinery and equipment, n.e.c.; electrical machinery and apparatus, n.e.c.; and other transport equipment only. | 35 | Les données ne concernent que les produits métalliques ouvrés, les machines et le matériel, n.c.a., les machines et appareils électriques, n.c.a., autre matériel de transport. |
| 36 | Data refers to food only. | 36 | Les données ne concernent que les denrées alimentaires. |
| 37 | Data refers to chemicals and rubber products only. | 37 | Les données ne concernent que les produits chimiques et les produits en caoutchouc. |
| 38 | Excluding transport equipment. | 38 | À l'exclusion du matériel de transport. |
| 39 | Excluding petroleum and pharmaceutical products. | 39 | À l'exclusion des produits pétroliers et pharmaceutiques. |
| 40 | Twelve months ending 31 March of the year stated. | 40 | Période de 12 mois finissant le 31 mars de l'année indiquée. |
| 41 | Excluding repair and installation of machinery and equipment. | 41 | Non compris la réparation et installation de machines et de matériel. |
| 42 | Including water and waste management. | 42 | Y compris la gestion de l'eau et des déchets. |
| 43 | Twelve months beginning 1 July of the year stated. | 43 | Période de 12 mois commençant le 1er juillet de l'année indiquée. |
| 44 | Excluding motor vehicles and transport equipment. | 44 | À l'exclusion des véhicules à moteur et le matériel de transport. |
| 45 | Data refers to manufacture of all metal products, machinery and transport equipment only; excluding radio, television and communication apparatus. | 45 | Les données ne concernent que les produits métalliques, les machines et matériel de transport; À l'exclusion des appareils de radio, télévision et communication. |
| 46 | Including other non-metallic mineral products. | 46 | Y compris les produits minéraux non métalliques. |
| 47 | Data refers to fabricated metal products; machinery and equipment, n.e.c.; electrical machinery and apparatus, n.e.c.; and radio, television and communication equipment only. | 47 | Les données ne concernent que les produits métalliques ouvrés, les machines et le matériel, n.c.a., les machines et les appareils électriques, n.c.a., le matériel de radio, de télévision et de communication. |
| 48 | Excluding wearing apparel. | 48 | Les données ne concernent que les articles d'habillement. |
| 49 | Including manufacturing n.e.c. | 49 | Y compris les industries manufacturières n.c.a. |

Source:

Organisation des Nations Unies pour l'alimentation et l'agriculture (FAO), Rome, les données de FISHSTAT et FAOSTAT, dernier accès novembre 2015.

- For statistical purposes, the data for China do not include those for the Hong Kong Special Administrative Region (Hong Kong SAR), Macao Special Administrative Region (Macao SAR) and Taiwan Province of China.
- Including Amsterdam Island, Saint-Paul Island, and French scattered Indian Ocean Islands in Western Indian Ocean and Kerguelen Islands and Crozet Archipelago in Antarctic Indian Ocean. Catches reported for Antarctic fishing areas are included with those of France.

- Pour la présentation des statistiques, les données pour la Chine ne comprennent pas la Région Administrative Spéciale de Hong Kong (Hong Kong RAS), la Région Administrative Spéciale de Macao (Macao RAS) et la province de Taiwan.
- Y compris les îles des Terres australes et antarctiques françaises : l'île Amsterdam, l'île Saint-Paul, les Îles éparses, les îles Kerguelen et l'archipel Crozet. Les captures dans les zones antarctiques de pêche sont reportées parmi celles de France.

28

Roundwood

Production (solid volume of roundwood without bark): million cubic metres

Bois rond

Production (volume solide de bois rond sans écorce): millions de mètres cubes

Source:

United Nations Statistics Division, New York, Trade Statistics Branch, last accessed June 2015.

& The regional totals for imports and exports have been adjusted to exclude the re-exports of countries or areas comprising each region.

§ For member states of this grouping, see Annex I – Other groupings. The totals have been calculated for all periods shown according to the current composition.

† Systems of trade: Two systems of recording trade, the General trade system (G) and the Special trade system (S), are in common use. They differ mainly in the way warehoused and re-exported goods are recorded. See the Technical notes for an explanation of the trade systems.

- 1 This classification is intended for statistical convenience and does not, necessarily, express a judgement about the stage reached by a particular country in the development process.
- 2 Developed economies of Asia, Northern America, Europe and Oceania.
- 3 Comprises of Australia, Japan and New Zealand.
- 4 Excludes CIS countries in Europe and South Eastern Europe.
- 5 Includes Albania, Bosnia and Herzegovina, Bulgaria, Montenegro, Romania, Serbia, and The Former Yugoslav Republic of Macedonia.
- 6 Excludes Sudan.
- 7 Includes Sudan.
- 8 Excludes Japan.
- 9 Excludes Armenia, Azerbaijan and Georgia.
- 10 Excludes Australia and New Zealand.
- 11 Year ending 30 September.
- 12 Imports f.o.b.
- 13 Trade statistics exclude certain oil and chemical products.
- 14 For statistical purposes, the data for China do not include those for the Hong Kong Special Administrative Region (Hong Kong SAR), Macao Special Administrative Region (Macao SAR) and Taiwan Province of China.
- 15 Export and import values exclude trade in the processing zone.
- 16 Imports exclude petroleum imported without stated value. Exports cover domestic exports.
- 17 Prior to 2008, special trade.
- 18 Including Guadeloupe, Martinique, Réunion and French Guiana.
- 19 Excluding military goods, fissionable materials, bunkers, ships and aircraft.
- 20 Year ending 20 March of the years stated.
- 21 Data include oil and gas. The value of oil exports and total exports are rough estimates based on information published in various petroleum industry journals.
- 22 Imports and exports net of returned goods. The figures also exclude Judea and Samaria and the Gaza area.
- 23 Trade data include maquiladoras and exclude goods from customs-bonded warehouses. Total exports include revaluation and exports of

Organisation des Nations Unies, Division de statistique, New York, la base de données pour les statistiques du commerce extérieur, dernier accès juin 2015.

& Les totaux régionaux pour importations et exportations ont été ajustés pour exclure les réexportations des pays ou zones qui comprennent la région.

§ Pour les Etats membres de ce groupements, voir annexe I – Autres groupements. Les totales ont été calculés pour toutes les périodes données suivant la composition présente.

† Systèmes de commerce : Deux systèmes d'enregistrement du commerce sont couramment utilisés, le Commerce général (G) et le Commerce spécial (S). Ils ne diffèrent que par la façon dont sont enregistrées les marchandises entreposées et les marchandises réexportées. Voir les Notes techniques pour une explication des Systèmes de commerce.

- 1 Cette classification est utilisée pour plus de commodité dans la présentation des statistiques et n'implique pas nécessairement un jugement quant au stage de développement auquel est parvenu un pays donné.
- 2 Économies développées de l'Asie, de l'Amérique, de l'Europe, et de l'Océanie.
- 3 Comprend l'Australie, le Japon et la Nouvelle-Zélande.
- 4 Exclut les pays membres de la CEI en Europe et Europe du Sud-est.
- 5 Comprend l'Albanie, la Bosnie-Herzégovine, la Bulgarie, le Monténégro, la Roumanie, la Serbie et l'ex-République yougoslave de Macédoine.
- 6 Exclut le Soudan.
- 7 Comprend le Soudan.
- 8 Exclut le Japon.
- 9 Exclut l'Arménie, l'Azerbaïdjan et la Géorgie.
- 10 Exclut l'Australie et la Nouvelle-Zélande.
- 11 Année finissant le 30 septembre.
- 12 Importations f.o.b.
- 13 Les statistiques commerciales font exclusion de certains produits pétroliers et chimiques.
- 14 Pour la présentation des statistiques, les données pour la Chine ne comprennent pas la Région Administrative Spéciale de Hong Kong (Hong Kong RAS), la Région Administrative Spéciale de Macao (Macao RAS) et la province de Taiwan.
- 15 Les valeurs à l'exportation et à l'importation excluent le commerce de la zone de transformation.
- 16 Non compris le pétrole brute dont la valeur des importations ne sont pas stipulée. Les exportations sont les exportations d'intérieur.
- 17 Avant 2008, commerce special.
- 18 Y compris Guadeloupe, Martinique, Réunion et Guyane française.
- 19 A l'exclusion des marchandises militaires, des matières fissibles, des soutes, des bateaux et de l'avion.
- 20 Année finissant le 20 mars de l'année indiquée.
- 21 Les données comprennent le pétrole et le gaz. La valeur des exportations de pétrole et des exportations totales sont des évaluations grossières basées sur l'information publiée à divers journaux d'industrie de pétrole.
- 22 Importations et exportations nets, ne comprenant pas les marchandises retournées. Sont également exclues les données de la Judée et de Samara et ainsi que la zone de Gaza.
- 23 Les statistiques du commerce extérieur comprennent maquiladoras et ne comprennent pas les marchandises provenant des entrepôts en

- 2 Les indices excluent les navires.
- 3 Non compris les biens militaires.

Part Three

Energy, environment and infrastructure

| | |
|---------------|--|
| Chapter XIII | Energy (table 36) |
| Chapter XIV | Environment (tables 37 – 40) |
| Chapter XV | Science and technology (tables 41 and 42) |
| Chapter XVI | Communication (tables 43 – 44) |
| Chapter XVII | International tourism and transport (tables 45 – 47) |
| Chapter XVIII | Development assistance (tables 48 – 50) |

Troisième partie

Energie, environnement et infrastructures

| | |
|----------------|--|
| Chapitre XIII | Énergie (tableau 36) |
| Chapitre XIV | Environnement (tableaux 37 – 40) |
| Chapitre XV | Science et technologie (tableaux 41 et 42) |
| Chapitre XVI | Communication (tableaux 43 – 44) |
| Chapitre XVII | Tourisme international et transport (tableaux 45 – 47) |
| Chapitre XVIII | Aide au développement (tableaux 48 – 50) |

36

Energy commodities

Production: solid and liquid fuels (thousand metric tons); Gaseous fuels (terajoules); Electricity (million kWh)

Principaux biens de l'énergie

Production: combustibles solides et liquides (milliers de tonnes); combustibles gazeux (térajoules); Electricité (millions de kWh)

Superficie totale, terres arables, cultures permanentes and superficie forestière: Organisation des Nations Unies pour l'alimentation et l'agriculture (FAO), Rome, données FAOSTAT, dernier accès novembre 2015.

Aires protégées : Centre mondial de surveillance de la conservation du Programme des Nations Unies pour l'environnement (PNUE), Cambridge, la base de données des Objectifs du Millénaire pour le développement, dernier accès novembre 2015.

& Figures calculated by United Nations Statistics Division.

&& Shows terrestrial and marine areas protected to total territorial area, data reflects year 2014.

& Valeurs calculées par la Division de statistique de l'ONU.

&& Se réfèrent aux zones terrestres et marines protégées par rapport à la superficie terrestre totale, données pour l'année 2014.

- 1 Due to the use of different data sources and overlaps in definitions and classifications, the sum of individual land use category data may exceed "total land area". Examples of such instances include forest and agriculture land with tree cover - such as rubber plantations, permanent tree crops, range land and agro-forestry and shifting cultivation areas.
- 2 For statistical purposes, the data for China do not include those for the Hong Kong Special Administrative Region (Hong Kong SAR), Macao Special Administrative Region (Macao SAR) and Taiwan Province of China.
- 3 Data for Saint Helena include those for Ascension and Tristan da Cunha.

- 1 En raison de l'utilisation de différentes sources de données et de recoupements dans les définitions et les classifications, la somme des différentes catégories d'utilisation des sols peut excéder la « superficie totale des terres ». C'est le cas par exemple des zones de forêt et de terres agricoles comprenant un couvert forestier – comme les plantations d'hévéas, les cultures arboricoles pérennes, les zones de pâturage et d'agrosylviculture et les zones de cultures itinérantes.
- 2 Pour la présentation des statistiques, les données pour la Chine ne comprennent pas la Région Administrative Spéciale de Hong Kong (Hong Kong RAS), la Région Administrative Spéciale de Macao (Macao RAS) et la province de Taiwan.
- 3 Les données concernant Sainte-Hélène comprennent celles relatives à Ascension et à Tristan da Cunha.

Source:

Carbon Dioxide Information Analysis Center (CDIAC) of the Oak Ridge National Laboratory, Oak Ridge, Tennessee, U.S.A., database on national CO₂ emission estimates, last accessed July 2015.

Source:

"Carbon Dioxide Information Analysis Center (CDIAC) of the Oak Ridge National Laboratory, Oak Ridge, Tennessee, U.S.A.", la base de données des estimations nationales des émissions de CO₂, dernier accès juillet 2015.

* These data are transformed from the original CDIAC data in metric tons of Carbon to metric tons of Carbon Dioxide by a factor of 3.667.

* Les données originales fournies par CDIAC en tonnes métriques de carbone sont converties en tonnes métriques de dioxyde de carbone en multipliant par un facteur de 3,667.

- 1 For statistical purposes, the data for China do not include those for the Hong Kong Special Administrative Region (Hong Kong SAR), Macao Special Administrative Region (Macao SAR) and Taiwan Province of China.
- 2 Including Monaco.
- 3 Including San Marino.
- 4 Include emissions from American Samoa, Guam, Puerto Rico, the U.S. Virgin Islands, and Wake Island.

- 1 Pour la présentation des statistiques, les données pour la Chine ne comprennent pas la Région Administrative Spéciale de Hong Kong (Hong Kong RAS), la Région Administrative Spéciale de Macao (Macao RAS) et la province de Taiwan.
- 2 Y compris Monaco.
- 3 Y compris Saint-Marin.
- 4 Y compris Samoa américaines, Guam, Porto Rico, les Iles Vierges des Etats-Unis et l'Ile de Wake.

& The figures are estimated by the international agency, when corresponding country data on a specific year or set of years are not available, or when multiple sources exist, or there are issues of data quality. Estimates are based on national data, such as surveys or administrative records, or other sources but on the same variable being estimated.

& Lorsque les données d'un pays sur une ou plusieurs années ne sont pas disponibles, ou lorsque plusieurs sources existent, ou s'il y a un problème de qualité des données, les chiffres sont estimés par l'organisme international. Ces estimations sont basées sur de données nationales comme les enquêtes, les registres administratifs, ou autres sources de la même variable estimée.

1 The drinking water estimates for Bangladesh have been adjusted for arsenic contamination levels based on the national surveys conducted and approved by the Government of Bangladesh.

1 Les estimations concernant l'eau potable pour le Bangladesh ont été ajustées afin de tenir compte des taux de pollution à l'arsenic constatés lors d'enquêtes nationales effectuées et approuvées par le Gouvernement bangladais.

2 Data for Sudan prior to the independence of South Sudan in 2011 include those for South Sudan.

2 Avant l'indépendance du Soudan du Sud en 2011, les données du Soudan incluaient aussi celles du Soudan du Sud.

United Nations Educational, Scientific and Cultural Organization (UNESCO) Institute for Statistics, Montreal, the UNESCO Institute of Statistics database, last accessed November 2015.

- 1 Including other classes.
- 2 Higher Education only.
- 3 Overestimated or based on overestimated data.
- 4 Excluding most or all capital expenditures.
- 5 Current costs only.
- 6 For statistical purposes, the data for China do not include those for the Hong Kong Special Administrative Region (Hong Kong SAR), Macao Special Administrative Region (Macao SAR) and Taiwan Province of China.
- 7 The sum of the breakdown does not add to the total.
- 8 Including private non-profit.
- 9 Government only.
- 10 S&T budget instead of R&D expenditure.
- 11 Excluding business enterprise.
- 12 Including business enterprise.
- 13 Excluding private non-profit.
- 14 Included elsewhere.
- 15 Including higher education.
- 16 Including Government.
- 17 R&D budget instead of R&D expenditure or based on R&D budget.
- 18 Included in business enterprise.
- 19 Excluding government.
- 20 Excluding Defence (all or mostly).
- 21 Excluding Higher Education.
- 22 Excluding data from some regions, provinces or states.
- 23 Underestimated or based on underestimated data.
- 24 Included in government.
- 25 Included in Higher education.

L'Institut de statistique de l'Organisation des Nations Unies pour l'éducation, la science et la culture (UNESCO), Montréal, la base de données de l'Institut de statistique de l'UNESCO, dernier accès novembre 2015.

- 1 Comprend d'autres catégories.
- 2 Enseignement supérieur seulement.
- 3 Surestimé ou fondé sur des données surestimées.
- 4 A l'exclusion des dépenses d'équipement (en totalité ou en grande partie).
- 5 Coût actuel seulement.
- 6 Pour la présentation des statistiques, les données pour la Chine ne comprennent pas la Région Administrative Spéciale de Hong Kong (Hong Kong RAS), la Région Administrative Spéciale de Macao (Macao RAS) et la province de Taiwan.
- 7 La somme de toutes les valeurs diffère du total.
- 8 Y compris les fonds privés à but non lucratif.
- 9 Etat seulement.
- 10 Budget pour la science et technologie au lieu des dépenses de recherche et développement.
- 11 Ne comprend pas les entreprises commerciales.
- 12 Y compris les fonds d'entreprises.
- 13 Non compris les organisations privées à but non lucratif.
- 14 Inclus ailleurs.
- 15 Y compris l'enseignement supérieur.
- 16 Y compris l'état.
- 17 Basé sur le budget de la recherche-développement au lieu des dépenses.
- 18 Compris dans les entreprises commerciales.
- 19 Non compris l'état.
- 20 A l'exclusion de la défense (en totalité ou en grande partie).
- 21 Non compris l'enseignement supérieur.
- 22 Non compris les données de certaines régions, provinces ou états.
- 23 Sous-estimé ou basé sur des données sous-estimées.
- 24 Compris dans gouvernement.
- 25 Compris dans Enseignement supérieur.

Union internationale des télécommunications (UIT), Genève, la base de données de l'UIT, dernier accès septembre 2015.

- 1 Canar counted as fixed line.
- 2 Data as at the end of June.
- 3 Data as at the end of December.
- 4 Data refers to subscriptions active in the last 3 months (or 90 days).
- 5 Decrease due to operator updating their records to exclude inactive subscriptions.
- 6 Includes data-only subscriptions.
- 7 Data refers to subscriptions active in the last 60 days.
- 8 Includes Mobile GSM and AMPS Post and Pre Mobile Base.
- 9 Includes Mobile GSM and AMPS Pre Mobile Base.
- 10 Includes mobile GSM mobile base.
- 11 Decrease in total number of subscribers is attributed mainly to foreign workers leaving the country.
- 12 Data refers to subscriptions active in the last month (or 30 days).
- 13 Excludes data-only subscriptions.
- 14 Includes retail subscriptions.
- 15 Data refers to number of mobile handsets in operation.

- 1 Canar comptabilisé comme ligne fixe.
- 2 Données à la fin de juin.
- 3 Données à la fin de décembre.
- 4 Les données portent sur les abonnements actifs au cours des trois derniers mois (90 jours).
- 5 Baisse due à l'exclusion des comptes inactifs par l'un des principaux opérateurs.
- 6 Y compris les abonnements aux services d'accès aux données.
- 7 Les données portent sur les abonnements actifs dans les derniers 60 jours.
- 8 Y compris Mobile GSM et AMPS Post et Pre Mobile Base en décembre 2010.
- 9 Y compris Mobile GSM et AMPS Pre Mobile Base.
- 10 Y compris Mobile GSM Mobile Base.
- 11 Diminution du nombre total d'abonnés attribuable principalement au départ des travailleurs étrangers quittant le pays.
- 12 Les données portent sur les abonnements actifs dans le dernier mois (ou 30 jours).
- 13 À l'exclusion des abonnements aux services d'accès aux données.
- 14 Y compris les abonnements de détail.
- 15 Les données portent sur le nombre de téléphones portables en fonctionnement.

|----|--|----|---|
| 16 | Includes inactive subscriptions. | 16 | Y compris les abonnés inactifs. |
| 17 | For statistical purposes, the data for China do not include those for the Hong Kong Special Administrative Region (Hong Kong SAR) and Macao Special Administrative Region (Macao SAR). | 17 | Pour la présentation des statistiques, les données pour la Chine ne comprennent pas la Région Administrative Spéciale de Hong Kong (Hong Kong RAS) et la Région Administrative Spéciale de Macao (Macao RAS). |
| 18 | Includes data-only subscriptions from two operators. | 18 | Y compris les abonnements aux services d'accès aux données de deux opérateurs. |
| 19 | Data as at the end of September. | 19 | Données à la fin de septembre. |
| 20 | Data refers to active subscriptions only. | 20 | Les données concernent les abonnements actifs. |
| 21 | Including telemetry. | 21 | Y compris la télémétrie. |
| 22 | Excludes telemetry subscriptions. | 22 | À l'exclusion des abonnements aux services de télémétrie. |
| 23 | Excludes prepaid cards that are used to provide Travel SIM/WorldMobile service. | 23 | À l'exclusion des cartes SIM prépayées utilisées pour fournir des services de voyage World Mobile. |
| 24 | Data refer to March of following year. | 24 | Les données se réfèrent à mars de l'année suivante. |
| 25 | Reduction in multiple sim usage per subscriber (of different network operators). | 25 | Baisse du nombre d'utilisations de cartes SIM multiples par abonné (de différents opérateurs réseau). |
| 26 | Data from one operator refer to end of the third quarter. | 26 | Les données provenant d'un opérateur portent sur la fin du troisième trimestre. |
| 27 | Data refers to one operator. | 27 | Les données portent sur un opérateur précis. |
| 28 | New tax on numbering resources, which has prompted operators to return several numbers, either inactive ones or with low consumption. | 28 | Nouvelle taxe sur les ressources de numérotation, qui a incité les opérateurs à rendre plusieurs numéros inactifs ou sous-utilisés. |
| 29 | Decrease due to operator updating their records to exclude inactive subscriptions and active blocking of international bypass SIMs. | 29 | Baisse due à la fermeture des comptes inactifs et le filtrage actif des cartes internationales SIMS débloquées. |
| 30 | Decrease due to merger or closing of operators in the mobile market. | 30 | Baisse découlant de la fusion ou de la fermeture d'opérateurs de téléphonie mobile. |
| 31 | Including Nordic Mobile Telephone (NMT). | 31 | Y compris la société Nordic Mobile Telephone (NMT). |
| 32 | Including fixed wireless local loop (WLL) subscriptions. | 32 | Y compris les abonnements au réseau d'accès hertzien (WLL). |
| 33 | Data as at the end of October. | 33 | Données à la fin de octobre. |
| 34 | Includes Mobile virtual network operators (MVNOs). | 34 | Y compris les opérateurs de téléphonie mobile sans réseau (MVNO). |
| 35 | Including Personal Handy-phone System (PHS) subscriptions. | 35 | Y compris les abonnements au système PHS (Personal Handy System). |
| 36 | Including Personal Handy-phone System (PHS) and data-only subscriptions. | 36 | Y compris la téléphonie PHS et les abonnements aux services d'accès aux données. |
| 37 | Does not include data from all operators. | 37 | Ne comprend pas les données de tous les opérateurs. |
| 38 | Decrease due to implementation of subscriber registration. | 38 | Baisse due à la mise en place d'un système d'enregistrement des abonnés. |
| 39 | Data as of 12 March. | 39 | Données au 12 mars. |
| 40 | Data as at the end of March. | 40 | Données à la fin de mars. |
| 41 | Data as at the end of July. | 41 | Données à la fin de juillet. |
| 42 | Data refers to the third quarter. | 42 | Troisième trimestre. |
| 43 | Data refers to subscriptions active in the last 6 months (or 180 days). | 43 | Les données portent sur les abonnements actifs pendant les six derniers mois (180 jours). |
| 44 | Global System for Mobile Communications (GSM). | 44 | GSM. |
| 45 | Data refers to pre-paid subscriptions active in the last month (or 30 days). | 45 | Les données portent sur les abonnements prépayés actifs pendant le dernier mois (30 jours). |
| 46 | Data refers to the first quarter. | 46 | Premier trimestre. |
| 47 | Data refers to pre-paid subscriptions active in the last 6 months (or 180 days). | 47 | Les données portent sur les abonnements prépayés actifs pendant les six derniers mois (180 jours). |
| 48 | Decrease due to change in operator's method of counting pre-paid subscriptions. | 48 | Baisse due aux modifications apportées à la méthode utilisée par l'opérateur pour calculer le nombre d'abonnements prépayés. |
| 49 | Decrease due to subscriptions which are inactive for 3 months being deactivated. | 49 | Baisse due à une modification des contrats: les comptes inactifs pendant 3 mois sont désactivés. |
| 50 | Includes inactive pre-paid subscriptions. | 50 | Y compris les abonnements prépayés inactifs. |
| 51 | Data refers to pre-paid subscriptions active in the last 3 months (or 90 days). | 51 | Les données portent sur les abonnements prépayés actifs pendant les trois derniers mois (90 jours). |
| 52 | Data as at the end of January. | 52 | Données à la fin de janvier. |
| 53 | Data as at the end of February. | 53 | Données à la fin de février. |
| 54 | Data refers to the fourth quarter. | 54 | Quatrième trimestre. |
| 55 | Includes active subscriptions using CDMA (Code Division Multiple Access) and GSM (Global System for Mobiles). | 55 | Y compris les abonnements actifs utilisant les systèmes CDMA (Code Division Multiple Access) et GSM (global system for mobile). |
| 56 | Natural disasters impacted telecommunication network. | 56 | Les désastres naturels ont impacté les réseaux de télécommunication. |

The following abbreviations have been used in the table:

IFAD: International Fund for Agricultural Development
 UNDP: United Nations Development Programme
 UNFPA: United Nations Population Fund
 UNHCR: United Nations High Commissioner for Refugees
 UNICEF: United Nations Children's Fund
 WFP: World Food Programme

^a Expenditures by FAO, IAEA, ICAO, ILO, IMO, ITU, UNESCO, UNIDO, UN Women, UPU, WHO, WIPO, WMO and the World Tourism Organization.

^b Expenditures by ITC, OHCHR, UNAIDS, UNCDF, UNCTAD, UNDESA, UNECA, UNECE, UNECLAC, UNESCAP, UN ESCWA, UNEP, UN-Habitat, UNOCHA, UNODC, UNRWA and UNV.

Les abréviations ci-après ont été utilisées dans le tableau :

FIDA: Fonds international de développement agricole
 PNUD: Programme des Nations Unies pour le développement
 FNUAP: Fonds des Nations Unies pour la population
 HCR: Haut-Commissariat des Nations Unies
 UNICEF: Fonds des Nations Unies pour l'enfance
 PAM: Programme alimentaire mondial

^a Dépenses engagées par la FAO, l'AIEA, l'OACI, l'OMM, l'OMPI, l'OMS, ONU Femmes, l'ONUDI, l'OIT, l'OMI, l'UNESCO, l'UIT, l'UPU et l'Organisation mondiale du tourisme.

^b Dépenses engagées par le CCI, la CNUCED, la CEA de l'ONU, le DAES de l'ONU, la CEE de l'ONU, la CEPALC de l'ONU, la CESAP de l'ONU, la CESAO de l'ONU, ONU/Habitat, l'HCDH, l'ONUSIDA, le PNUE, l'UNCDF, l'UNODC, l'UNRWA, le VNU et le Bureau de la coordination des affaires humanitaires.

Annex I - Country and area nomenclature, regional and other groupings

The *Statistical Yearbook* lists countries or areas based on the United Nations Standard Country Codes (Series M, No. 49), prepared by the Statistics Division of the United Nations Secretariat and first issued in 1970¹. The list of countries or areas; the composition of geographical regions and economic, trade and other groupings used within this yearbook (as at 31 December 2013) are presented in this Annex. The names of countries or areas refer to their short form used in day-to-day operations of the United Nations and not necessarily to their official name as used in formal documents². As an aid to statistical data processing, a unique standard three-digit numerical code is assigned to each country or area and to each geographical region and grouping of countries or areas. For reference, these codes, where applicable, are presented to the left of each country or area listed in this Annex. These codes range from 000 to 899, inclusive.

A. Changes in country or area names (since 31 December 2003)

The geographical extent of a country or area, or the composition of a geographical region, may change over time and users should take such changes into account in interpreting the tables in this Yearbook. A change in the name of a country or area while its geographical coverage remains the same is not usually accompanied by a change in its numerical code. Changes in numerical codes and names in the general period covered by the statistics (since 31 December 2003) in the *Yearbook*, are shown below;

| Numerical code | Country or area (added or changed) | Date of change | Numerical code | Country or area (Name changes with no change in code) | Date of change |
|----------------|------------------------------------|----------------|----------------|--|----------------|
| 728 | South Sudan | 2011 | 132 | Cabo Verde, <i>previously Cape Verde</i> | 2013 |
| 729 | Sudan | 2011 | 275 | State of Palestine, <i>previously Occupied Palestinian Territory</i> | 2013 |
| 531 | Curaçao | 2010 | | | |
| 534 | Sint Maarten (Dutch part) | 2010 | 434 | Libya, <i>previously Libyan Arab Jamahiriya</i> | 2011 |
| 535 | Bonaire, Sint Eustatius and Saba | 2010 | 068 | Bolivia (Plurinational State of), <i>previously Bolivia</i> | 2009 |
| 652 | Saint Barthélemy | 2007 | | | |
| 663 | Saint Martin (French part) | 2007 | 498 | Republic of Moldova, <i>previously Moldova (since 2007)</i> | 2008 |
| 499 | Montenegro | 2006 | | | |
| 688 | Serbia | 2006 | 862 | Venezuela (Bolivarian Republic of), <i>previously Venezuela</i> | 2006 |
| 034 | Southern Asia ³ | 2005 | | | |
| 143 | Central Asia ³ | 2005 | | | |
| 831 | Guernsey | 2005 | | | |
| 832 | Jersey | 2005 | | | |

B. Regional groupings

The scheme of regional groupings given on the next page is based mainly on 6 continents; these continental regions, except Antarctica, are further subdivided into 22 sub-regions and 2 intermediary regions (Sub-Saharan Africa and Latin America and the Caribbean) that are drawn as to obtain greater homogeneity in sizes of population, demographic circumstances and accuracy of demographic statistics. This nomenclature is widely used in international statistics and is followed to the greatest extent possible in the present *Yearbook* in order to promote consistency and facilitate comparability and analysis. However, it is by no means universal in international statistical compilation, even at the level of continental regions, and variations in international statistical sources and methods dictate many unavoidable differences in particular fields in the present *Yearbook*. General differences are indicated in the footnotes to the classification presented below. More detailed differences are given in the footnotes and technical notes to individual tables.

Neither is there international standardization in the use of the terms “developed” and “developing” countries, areas or regions. These terms are used in the present publication to refer to regional groupings generally considered as “developed”: these are Northern America (numerical code 021), Europe (150), Japan (392) and Australia and New Zealand (053). These designations are intended for statistical convenience and do not necessarily express a judgement about the stage reached by a particular country or area in the development process. Differences from this usage are indicated in the notes to individual tables.

¹ Four revisions of this document were published in 1975, 1982, 1996 and 1999 (ST/ESA/STAT/SER.M/49/Rev.4). Further revisions are now published on the United Nations Statistics Division website under the M49 section.

² A listing in the 6 official languages of the United Nations is contained in Terminology Bulletin No. 347/Rev.1 or the UNTERM website, prepared by the Department of General Assembly Affairs and Conference Services of the United Nations Secretariat.

³ Previously listed as South-Central Asia (numerical code 062).

Annexe I - Nomenclature des pays ou zones, groupements régionaux et autres groupements

L'Annuaire statistique répertorie de pays ou de zones sur la base de l'opuscule United Nations Standard Country Codes (Série M, n° 49) rédigée par la Division de statistique du Secrétariat de l'Organisation des Nations Unies et publiée en 1970¹. La liste des pays ou zones; la composition des régions géographiques et économiques, commerciales et d'autres groupements utilisés dans cet annuaire (au 31 Décembre 2013) sont présentées dans la présente annexe. On a eu recours à la forme brève des noms des pays et

¹ Quatre révisions de ce document ont été publiés en 1975, 1982, 1996 et 1999 (ST/ESA/STAT/SER.M/49/Rev.4). D'autres révisions sont maintenant publiés sur le site internet de la Division de statistique des Nations Unies.

des zones usitées au cours des activités courantes des Nations Unies, et pas nécessairement aux désignations officielles utilisées dans les documents officiels². Afin de faciliter le traitement des données statistiques, un code numérique unique et standard à trois chiffres est attribué à chaque pays ou zone et à chaque région géographique et groupement de pays ou de zones. Pour référence, ces codes, le cas échéant, sont présentés à la gauche de chaque pays ou zone visées dans cette annexe. Ces codes s'échelonnent entre 000 et 899.

A. Changements dans le nom des pays ou zones (depuis 31 Décembre 2003)

L'étendue géographique d'un pays ou d'une zone ou la composition d'une région géographique peuvent varier au fil du temps et les utilisateurs devront tenir compte de telles modifications lorsqu'ils ont recours aux codes indiqués dans la présente publication et qu'ils établissent des rapports entre les données portant sur différentes périodes. La modification du nom d'un pays ou d'une zone alors que son espace géographique demeure le même n'est pas habituellement accompagnée d'un changement de son code numérique. Changements dans les codes numériques et noms dans la période générale couverts par les statistiques (depuis le 31 Décembre 2003) dans l'Annuaire, sont présentés ci-dessous;

| Code numérique | Pays ou région (nouveaux codes et codes modifiés) | Date de la modification | Code numérique | Pays ou région (Changements de nom sans modification du code) | Date de la modification |
|----------------|---|-------------------------|----------------|---|-------------------------|
| 728 | Soudan du Sud | 2011 | 132 | Cabo Verde, <i>ex-Cap-Vert</i> | 2013 |
| 729 | Soudan | 2011 | 434 | État de Palestine, <i>ex-Territoire palestinien occupé</i> | 2013 |
| 531 | Curaçao | 2010 | | | |
| 534 | Saint-Martin (partie néerlandaise) | 2010 | 275 | Libye, <i>ex-Jamahiriya arabe libyenne</i> | 2011 |
| 535 | Bonaire, Saint-Eustache et Saba | 2010 | | | |
| 652 | Saint-Barthélemy | 2007 | 068 | Bolivie (État plurinational de), <i>ex-Bolivie</i> | 2009 |
| 663 | Saint-Martin (partie française) | 2007 | | | |
| 499 | Monténégro | 2006 | 498 | République de Moldova, <i>ex-Moldova (depuis 2007)</i> | 2008 |
| 688 | Serbie | 2006 | | | |
| 034 | Asie méridionale ³³ | 2005 | 862 | Venezuela (République bolivarienne du), <i>ex-Venezuela</i> | 2006 |
| 143 | Asie centrale ³ | 2005 | | | |
| 831 | Guernesey | 2005 | | | |
| 832 | Jersey | 2005 | | | |

B. Groupements régionaux

Le système des groupements régionaux à la page suivante est principalement basé sur les 6 continents; ces régions continentales, à l'exception de l'Antarctique, sont subdivisées en 22 sous-régions et 2 régions intermédiaires (Afrique subsaharienne et l'Amérique latine et Caraïbes) afin d'obtenir une homogénéité accrue les effectifs de population, les situations démographiques et la précision des statistiques démographiques. Cette nomenclature est couramment utilisée aux fins des statistiques internationales et a été appliquée autant qu'il a été possible dans le présent *Annuaire* en vue de renforcer la cohérence et de faciliter la comparaison et l'analyse. Son utilisation pour l'établissement des statistiques internationales n'est cependant rien moins qu'universelle, même au niveau des régions continentales, et les variations que présentent les sources et méthodes statistiques internationales entraînent inévitablement de nombreuses différences dans certains domaines de cet *Annuaire*. Les différences d'ordre général sont indiquées dans les notes figurant au bas de la classification présentée ci-dessous. Les différences plus spécifiques sont mentionnées dans les notes techniques et notes de bas de page accompagnant les divers tableaux.

L'application des expressions "développés" et "en développement" aux pays, zones ou régions n'est pas non plus normalisée à l'échelle internationale. Ces expressions sont utilisées dans la présente publication en référence aux groupements régionaux généralement considérés comme "développés", à savoir l'Amérique septentrionale (code numérique 021), l'Europe (150), le Japon (392) et l'Australie et la Nouvelle-Zélande (053). Ces appellations sont employées pour des raisons de commodité statistique et n'expriment pas nécessairement un jugement sur le stade de développement atteint par tel ou tel pays ou zone. Les cas différant de cet usage sont signalés dans les notes accompagnant les tableaux concernés.

² Le Bulletin terminologique No 347/Rev.1 ou UNTERM website, intitulé "Noms de pays" établi par le Département des affaires de l'Assemblée générale et des services de conférence du Secrétariat de l'Organisation des Nations Unies, répertorie les noms des États Membres dans les six langues de l'Organisation.

³ Faisait auparavant partie du Asie centrale et du Sud (code numérique 062).

Annex II: Technical notes

Chapter I: World summary

Table 1: World statistics – selected series

The series of world aggregates on population, output, production and external trade have been compiled from statistical publications and databases of the United Nations and the specialized agencies and other institutions. The sources should be consulted for detailed information on compilation and coverage.

Chapter II: Population and social statistics

Table 2: Population, rate of increase, birth and death rates, surface area and density

“Mid-year population estimates”, “annual rate of increase”, “crude birth and death rates” and “density” are taken from the estimates and projections prepared by the United Nations Population Division, published in *World Population Prospects: The 2015 Revision*. “Surface area” are obtained from the *Demographic Yearbook 2013*, through this source only official national data are reported.

“Mid-year population estimates” is the de facto population in a country, area or region as of 1 July of the year indicated. Figures are presented in millions.

“Annual rate of increase” is the average exponential rate of growth of the population over a given period. It is calculated as $\ln(P_t/P_0)/t$ where t is the length of the period. It is expressed as a percentage.

The “crude birth rate” is the number of births over a given period divided by the person-years lived by the population over that period. It is expressed as average annual number of births per 1,000 population. Similarly, the “crude death rate” is the number of deaths over a given period divided by the person-years lived by the population over that period. It is expressed as average annual number of deaths per 1,000 population.

“Density” is the population per square Kilometre.

“Surface area” estimates include inland waters.

Table 3: Selected indicators of life expectancy, childbearing, age dependency and mortality

“Life expectancy at birth”, “Fertility rate”, “Dependency ratio” and “Infant mortality rate” are taken from the estimates and projections prepared by the United Nations Population Division, published in *World Population Prospects: The 2015 Revision*. For small countries or areas, these data are supplemented by the United Nations Statistics Division *Demographic Yearbook 2013* and the *Secretariat for the Pacific Community (SPC)*. “Maternal mortality ratio” are estimates developed by the World Health Organization, UNICEF, the United Nations Population Fund, the World Bank and United Nations Population Division and published in *Trends in Maternal Mortality: 1990 to 2015*.

“Life expectancy at birth” is an overall estimate of the average number of years of life expected by a hypothetical cohort of individuals who would be subject during all their lives to the mortality rates of a given period. It is expressed as years. Many developing countries lack complete and reliable statistics of births and deaths based on civil registration, so various estimation techniques are used to calculate life expectancy estimates using other sources of data, mainly population censuses and demographic surveys. Life expectancy at birth gives a statistical summary of current differences in mortality across all ages. However, trends and differentials in infant and child mortality rates are the predominant influence on trends and differentials in life expectancy at birth in many developing countries. Thus, life expectancy at birth is of limited usefulness in these countries in assessing levels and differentials in mortality at other ages.

The “fertility rate” is the average number of children a hypothetical cohort of women would have at the end of their reproductive period if they were subject during their whole lives to the fertility rates of a given period and if they were not subject to mortality. It is expressed as children per woman.

The “dependency ratio” is the number of people in the population aged under 15 years old and over 64 years old per 100 people in the population aged between 15 and 64 years old, expressed as a ratio.

The “Infant mortality rate” is the probability of dying between birth and exact age 1, expressed as deaths per 1,000 births. In most developing countries where civil registration data are deficient, the most reliable sources are demographic household surveys. Where these are not available, other sources (and general estimates) are made which are necessarily of limited reliability. Where countries lack comprehensive and accurate systems of civil registration,

infant mortality statistics by sex are difficult to collect or to estimate with any degree of reliability because of reporting biases, and thus are not shown here.

The “Maternal mortality ratio” is the ratio of the number of maternal deaths during a given time period per 100,000 live births during the same time-period. A maternal death refers to a female death from any cause related to or aggravated by pregnancy or its management (excluding accidental or incidental causes) during pregnancy and childbirth or within 42 days of termination of pregnancy, irrespective of the duration and site of the pregnancy.

Table 4: Population in the capital city, urban and rural areas

The statistics on population in the capital city and urban areas and their rates of growth for each country or area are estimates and projections published by the Population Division of the Department of Economic and Social Affairs of the United Nations Secretariat in the *World Urbanization Prospects: The 2014 Revision*. Because of national differences in the specific characteristics that distinguish urban from rural areas, there are no internationally agreed definitions of urban and rural. In most countries, the distinction is mainly based on size of locality. For the latest available census definition of urban areas in a particular country or area, reference should be made to the *Demographic Yearbook*. Annual rates of change in urban and rural population are computed as average annual percentage changes using mid-year population estimates.

Chapter III: Gender

Table 5: Proportion of seats held by women in national parliament

The table shows the percentage of seats held by women members in single or lower chambers of national parliaments as at January/ February each year (see table footnotes for specific details). National parliaments can be bicameral or unicameral. This table covers the single chamber in unicameral parliaments and the lower chamber in bicameral parliaments. It does not cover the upper chamber of bi-cameral parliaments. Seats are usually won by members in general parliamentary elections. Seats may also be filled by nomination, appointment, indirect election, rotation of members and by-election. The proportion of seats held by women in national parliament is derived by dividing the total number of seats occupied by women by the total number of seats in parliament. There is no weighting or normalising of statistics. The source for this table is the Inter-Parliamentary Union (IPU), see www.ipu.org for further information.

Table 6: Share of women in wage employment in the non-agricultural sector

The share of women in wage employment in the non-agricultural sector is the share of female workers in wage employment in the non-agricultural sector expressed as a percentage of total wage employment in that same sector. The non-agricultural sector includes industry and services. “Industry” includes mining and quarrying (including oil production), manufacturing, construction, electricity, gas, and water, corresponding to divisions 2-5 in the International Standard Industrial Classification of All Economic Activities (ISIC-Rev.2) and to tabulation categories C-F in ISIC-Rev. 3. “Services” include wholesale and retail trade and restaurants and hotels; transport, storage, and communications; financing, insurance, real estate, and business services; and community, social, and personal services, corresponding to divisions 6-9 in ISIC-Rev. 2, and to tabulation categories G-Q in ISIC-Rev. 3.

Employment refers to people above a certain age who worked or held a job during a specified reference period (according to the ILO Resolution concerning statistics of the economically active population, employment, unemployment and underemployment, adopted by the Thirteenth International Conference of Labour Statisticians (ICLS), October 1982). Wage employment refers only to wage earners and salaried employees, or “persons in paid employment jobs”. Employees are typically remunerated by wages and salaries, but may be paid by commission from sales, piece-rates, bonuses or payments in kind such as food, housing, training, etc. These persons are in wage employment as opposed to self-employment – that is employers, own-account workers, members of producers' cooperatives and contributing family workers. The different statuses in employment are defined according to the ILO Resolution concerning the International Classification of Status in Employment (ICSE), adopted by the 15th ICLS (1993). The source for this table is the Millennium Development Goals database, see <http://mdgs.un.org> for further information.

Table 7: Ratio of girls to boys in primary, secondary and tertiary education

The ratio of girls to boys (gender parity index) in primary, secondary and tertiary education is the ratio of the number of female students enrolled at primary, secondary and tertiary levels of education to the number of male students in each level. To standardise the effects of the population structure of the appropriate age groups, the Gender Parity Index (GPI) of the Gross Enrolment Ratio (GER) for each level of education is used. The source for this table is the UNESCO Institute for Statistics (UIS), see www.uis.unesco.org for further information.

Chapter IV: Education

Data in Tables 8-10 are presented using the 2011 revision of UNESCO's International Standard Classification of Education (ISCED). Data are presented in the tables based on the three main levels of educations defined as follows;

“Primary education” (ISCED level 1) programmes are typically designed to provide students with fundamental skills in reading, writing and mathematics (i.e. literacy and numeracy) and establish a solid foundation for learning and understanding core areas of knowledge, personal and social development, in preparation for lower secondary education. It focuses on learning at a basic level of complexity with little, if any, specialisation.

“Secondary education” (ISCED level 2 and 3) is divided into two different stages, i.e. lower secondary and upper secondary. Lower secondary education programmes are typically designed to build on the learning outcomes from primary. Usually, they aim to lay the foundation for lifelong learning and human development upon which education systems may then expand further educational opportunities. Upper secondary education programmes are typically designed to complete secondary education in preparation for tertiary education or provide skills relevant to employment, or both. Programmes at this level offer students more varied, specialised and in-depth instruction than programmes at lower secondary. They are more differentiated, with an increased range of options and streams available. Teachers are often highly qualified in the subjects or fields of specialisation they teach, particularly in the higher grades.

Tertiary education (ISCED levels 5-8) builds on secondary education, providing learning activities in specialised fields of education. It aims at learning at a high level of complexity and specialisation. Tertiary education includes what is commonly understood as academic education but also includes advanced vocational or professional education. It comprises ISCED levels 5, 6, 7 and 8, which are labelled as short-cycle tertiary education, Bachelor's or equivalent level, Master's or equivalent level, and doctoral or equivalent level, respectively. The content of programmes at the tertiary level is more complex and advanced than in lower ISCED levels.

For more information about the International Standard Classification of Education (ISCED) 2011 please refer to: <http://www.uis.unesco.org/Education/Documents/isced-2011-en.pdf>

Table 8: Education at the primary, secondary and tertiary levels

The table shows the number of students enrolled as well as the proportion of female students enrolled expressed as a percentage of the total (male and female) at the same level in a given school year.

Table 9: Public expenditure on education

Public expenditure on education consists of current and capital expenditures on education by local, regional and national governments, including municipalities. Household contributions are excluded. Current expenditure on education includes expenditure for goods and services consumed within the current year and which would need to be renewed if needed the following year. It includes expenditure on: staff salaries and benefits; contracted or purchased services; other resources including books and teaching materials; welfare services; and other current expenditure such as subsidies to students and households, furniture and equipment, minor repairs, fuel, telecommunications, travel, insurance and rents. Capital expenditure on education includes expenditure for assets that last longer than one year. It includes expenditure for construction, renovation and major repairs of buildings and the purchase of heavy equipment or vehicles.

Table 10: Teaching staff at the primary, secondary and tertiary levels

The table shows the total number of teachers at a given level of education, as well as the proportion of female teachers expressed as a percentage of the total (male and female) at the same level in a given school year. The data sources include school census or surveys and teachers' records.

Teaching staff (at primary or secondary level) are employed in a professional capacity to guide and direct the learning experiences of students, irrespective of their training, qualifications or delivery mechanism (i.e. face-to-face or at distance). Teaching involves planning, organizing and conducting group activities whereby students' knowledge, skills and competencies develop as stipulated in the education programme in which they participate. Educational personnel who have no teaching duties (e.g. head teachers or principals who do not teach) or people who work occasionally, in a voluntary capacity or as teachers' aides in educational institutions (e.g. parents, student teachers, guest lecturers) are excluded.

Academic staff (at tertiary levels) are personnel employed whose primary assignments are instruction and/or research. This includes personnel who hold an academic rank with such titles as professor, associate professor, assistant professor, instructor, lecturer, or the equivalent of any of these academic ranks. Personnel with other titles (e.g. dean, director, associate dean, assistant dean, chair or head of department) are also included if their principal activity is instruction or research.

Chapter V: Health

Table 11: Health personnel

The table shows four main categories of health personnel (out of 9 categories available in the source); Physicians which includes generalist medical practitioners and specialist medical practitioners; Nursing and midwifery personnel which includes nursing professionals, midwifery professionals, nursing associate professionals and midwifery associate professionals. Traditional midwives are not included here; Dentistry personnel includes dentists, dental assistants, dental technicians and related occupations; and Pharmaceutical personnel which includes pharmacists, pharmaceutical assistants, pharmaceutical technicians and related occupations.

The data are obtained from the World Health Organisation's (WHO) Global Health Workforce Statistics database which are compiled from several sources such as national population censuses, labour force and employment surveys, national statistical products and routine administrative information systems. As a result, considerable variability remains across countries in the coverage, quality and reference year of the original data. In general, the denominator data for health workforce density (i.e. national population estimates) were obtained from the United Nations Population Division's *World Population Prospects* publication. In some cases, the official report provided only workforce density indicators, from which estimates of the stock were then calculated.

The classification of health workers used is based on criteria for vocational education and training, regulation of health professions, and activities and tasks of jobs, i.e. a framework for categorizing key workforce variables according to shared characteristics. The WHO framework largely draws on the latest revisions to the internationally standardized classification systems of the International Labour Organization (International Standard Classification of Occupations), United Nations Educational, Scientific and Cultural Organization (International Standard Classification of Education), and the United Nations Statistics Division (International Standard Industrial Classification of All Economic Activities). Depending on the nature of each country's situation and the means of measurement, data are available for up to 9 categories of health workers in the aggregated set, and up to 18 categories in the disaggregated set. The latter essentially reflects attempts to better distinguish some subgroups of the workforce according to assumed differences in skill level and skill specialization.

Table 12: Expenditure on health

Total expenditure on health is the sum of all outlays for health maintenance, restoration or enhancement paid for in cash or supplied in kind. It is the sum of General Government Expenditure on Health and Private Expenditure on Health. General government expenditure on health is the sum of health outlays paid for in cash or supplied in kind by government entities, such as the Ministry of Health, other ministries, parastatal organizations or social security agencies (without double counting government transfers to social security and extra budgetary funds). It includes all expenditure made by these entities, regardless of the source, so includes any donor funding passing through them. It

includes transfer payments to households to offset medical care costs and extra budgetary funds to finance health services and goods. It includes current and capital expenditure. More information on the definition, methodology, sources and limitations of the data can be found on the Global Health Expenditure Database (see <http://apps.who.int/nha/database/DocumentationCentre/Index/fr>)

Chapter VI: National accounts

The National Accounts Main Aggregates Database (available at <http://unstats.un.org/unsd/snaama>) presents national accounts data for more than 200 countries and areas of the world. It is the basis for the publication of National Account Statistics: Analysis of Main Aggregates (AMA), a publication prepared by the Statistics Division of the Department for Economic and Social Affairs of the United Nations Secretariat with the generous co-operation of national statistical offices. The database is updated in December of each year with newly available national accounts data for all countries and areas.

The National Accounts Main Aggregates Database is based on the data obtained from the United Nations National Accounts Questionnaire (NAQ) introduced in October 1999, which in turn is based on the System of National Accounts 1993 (1993 SNA). The data are supplemented with estimates prepared by the Statistics Division. The updated SNA, called the System of National Accounts 2008 (2008 SNA) was finalised in September 2009. As of 2013, only Australia; Canada; China, Hong Kong Special Administrative Region; Ecuador; Israel; Mexico; Nigeria; Peru; Timor-Leste; Ukraine and the United States of America have started submitting data according to the 2008 SNA. However, several other countries' national statistics offices have national accounts data in 2008 SNA and they were used, whenever available, for preparing 2013 AMA estimates. These additional countries were: European Union member states, Iceland, Kenya, Lebanon, Malawi, New Zealand, Norway, Pakistan, Republic of Korea, Serbia, South Africa, South Sudan, Switzerland, TFYR of Macedonia and Uganda.

Every effort has been made to present the estimates of the various countries or areas in a form designed to facilitate international comparability. To this end, important differences in concept, scope, coverage and classification have been described in the footnotes for individual countries. Such differences should be taken into account to avoid misleading comparisons. Data contained in the tables relate to the calendar year for which they are shown, except in several cases. These special cases are posted on the National Accounts Main Aggregates Database website (<http://unstats.un.org/unsd/snaama/notes.asp>). The figures shown are the most recent estimates and revisions available at the time of compilation. In general, figures for the most recent year are to be regarded as provisional. The sums of the components in the tables may not necessarily add up to totals shown because of rounding.

Table 13: Gross domestic product and gross domestic product per capita

This table shows gross domestic product (GDP) and GDP per capita in US dollars at current prices, GDP at constant 2005 prices and the corresponding real rates of growth. The tables are intended to facilitate international comparisons of levels of income generated in production. Official data and estimates of total and per capita GDP at current prices have been converted to US dollars, while total GDP at constant prices are converted to 2005 prices before conversion to US dollars using the 2005 exchange rates. The conversion methodology to US dollars is described in the document on the methodology for the National Accounts Main Aggregates Database (<http://unstats.un.org/unsd/snaama/methodology.pdf>). For inter-country comparisons over time, it would be more appropriate to use the growth rate in the table based on constant price data, which are more indicative of inter-country and intra-grouping comparisons of trends in total GDP. The growth rate shown in the table is computed as geometric mean of annual growth rates expressed as percentages for the years.

Table 14: Gross domestic product by type of expenditure

This table disaggregates GDP at current prices into component parts and expresses these as percentage shares that outline the economic structures in countries. This provides an overview of the structure of the economic system expressed in current prices. It shows what portion of income from production is spent by households or government on final consumption, what is spent on investment, and what part of GDP is exported after deducting the expenditures on imports. It is noted that in some instances the shares for changes in inventories should be used with caution as countries may also include items such as statistical errors. Note that the breakdown in shares of GDP in current prices by type of expenditure might not add up to 100 per cent due to statistical discrepancies.

Table 15: Gross value added by kind of economic activity

This table presents the shares of the components of gross value added at current prices by kind of economic activity (in terms of ISIC 3):

- Agriculture, hunting, forestry and fishing (ISIC A-B)
- Mining and quarrying, Manufacturing, Electricity, gas and water supply (ISIC C-E)
- Manufacturing (ISIC D) as a separate activity)
- Construction (ISIC F)
- Wholesale and retail trade; repair of motor vehicles, motorcycles and personal and household goods, Hotels and restaurants (ISIC G-H)
- Transport, storage and communications (ISIC I)
- Other activities which includes Financial intermediation, Real estate, renting and business activities, Public administration and defense; compulsory social security, Education, Health and social work, Other community, social and personal service activities, Private households with employed persons (ISIC J-P).

Chapter VII: Finance

Detailed information and current figures relating to tables 16 and 17 are contained in International Financial Statistics, published by the International Monetary Fund (see also <http://elibrary-data.imf.org>) and in the United Nations Monthly Bulletin of Statistics. Detailed information and current figures relating to tables 18 and 19 are contained in the World Bank's International Debt Statistics databases, see <http://data.worldbank.org/products/ids>.

Table 16: International reserves excluding gold

Total Reserves minus Gold is the sum of the items Foreign Exchange, shown in this table, as well as Reserve Position in the Fund, and the U.S. dollar value of SDR holdings by monetary authorities. Foreign exchange includes monetary authorities' claims on non-residents in the form of foreign banknotes, bank deposits, treasury bills, short- and long-term government securities and other claims usable in the event of balance of payments need.

Table 17: Short-term interest rates

This table provides treasury bill rates and money market rates. Rates shown represent short-term money market rates - the rate at which short-term borrowings are effected between financial institutions or the rate at which short-term government paper is issued or traded in the market. Typical standardized names for these rates are Money Market Rate and Treasury Bill Rate, respectively. Descriptions of the national series are contained in the IMF's International Financial Statistics, see <http://elibrary-data.imf.org> for further information.

Table 18: External debt stocks and flows, long term

The World Bank Debtor Reporting System (DRS) maintains statistics on the external debt of developing countries on a loan-by-loan basis. The estimated total external indebtedness of developing countries is a combination of DRS data and other information obtained from creditors through the debt data collection systems of other agencies such as the Bank for International Settlements (BIS) and the Organization for Economic Co-operation and Development (OECD), supplemented by market sources and estimates made by country economists of the World Bank and desk officers of the International Monetary Fund (IMF). In this table, developing countries are those in which 2013 GNI per capita was below \$12,745. Long-term external debt has three components: a) public debt, b) publicly guaranteed debt, and c) private non-guaranteed external debt and data are further disaggregated by type of creditor.

The break-down and definitions found in the table are as follows:

| | | |
|---|-------------------------|--|
| Total long-term debt | | Debt that has an original or extended maturity of more than one year and that is owed to non-residents and is repayable in foreign currency, goods, or services. |
| <i>(a) Public and (b) publicly guaranteed</i> | | (a) an external obligation of a public debtor, including the national government, a political subdivision (or an agency of either), and autonomous public bodies (b) an external obligation of a private debtor that is guaranteed for repayment by a public entity |
| <i>Official creditors</i> | | |
| | Multilateral | Loans from international organizations (multilateral loans), excluding loans from funds administered by an inter-national organization on behalf of a single donor government. The latter are classified as loans from governments |
| | IBRD | International Bank for Reconstruction and Development |
| | IDA | International Development Association |
| | Bilateral | Loans from governments (bilateral loans) and from autonomous public bodies |
| <i>Private creditors</i> | | |
| | Bonds | Publicly issued and privately placed bonds; |
| | Commercial banks | Loans from private banks and other private financial institutions |
| | Other private | External liabilities on account of nationalized properties and unclassified debts to private creditors and includes credits from manufacturers, exporters, or other suppliers of goods |
| <i>(c) Private non-guaranteed</i> | | An external obligation of a private debtor that is not guaranteed for repayment by a public entity. Public and publicly guaranteed long-term debts are aggregated. |

A distinction is made between the following categories of external public debt:

| | |
|-----------------------------|---|
| Undisbursed debt | Total public and publicly guaranteed debt undrawn at year end; data for private nonguaranteed debt are not available |
| Commitments | Total amount of long-term loans for which contracts were signed in the year specified; data for private nonguaranteed debt are not available. |
| Disbursements | Drawings on outstanding loan commitments during the year specified |
| Principal repayments | Actual repayments of principal amortization made in foreign currencies, goods or services in the year specified; |
| Net flows | (Or net lending) are disbursements minus principal repayments |
| Interest payments | Actual repayments of interest payments made in foreign currencies, goods or services in the year specified |
| Net transfers | Net flows minus interest payments or disbursements minus total debt service payments |
| Total debt service | Sum of principal repayments and interest payments actually made in the year specified. |

All data related to public and publicly guaranteed debt are from debtors except for those on lending by some multi-lateral agencies, in which case the data are taken from the creditors' records. These creditors include the African Development Bank, the Asian Development Bank, the Central Bank for Economic Integration, the Inter-American Development Bank, the International Bank for Reconstruction and Development (IBRD) and the International Development Association (IDA). (The IBRD and IDA are components of the World Bank.)

The data referring to public and publicly guaranteed debt do not include data for (a) transactions with the International Monetary Fund, (b) debt repayable in local currency, (c) direct investment and (d) short term debt (that is, debt with an

original maturity of less than a year). The data referring to private non-guaranteed debt also exclude the above items but include contractual obligations on loans to direct investment enterprises by foreign parent companies or their affiliates.

Table 19: External debt stocks, (long-term) public and publicly guaranteed

The countries included in the table are those for which data are sufficiently reliable to provide a meaningful presentation of debt outstanding and future service payments and follow the same definitions and source as Table 18.

Chapter VIII: Labour market

A comparable and comprehensive collection of data on labour force and related topics are available from the International Labour Organisation's (ILO) *Key Indicators of the Labour Market (KILM)* publication, which is updated every 2 years. More timely information is contained in the ILO's ILOSTAT data repository (see www.ilo.org/ilostat) which publishes data as it is received from the countries either on an annual, quarterly or monthly basis but does not include all the consistency checks nor include all the sources used by KILM. For various reasons, national definitions of employment and unemployment often differ from the recommended international standard definitions and thereby limit international comparability. Inter-country comparisons are also complicated by a variety of types of data collection systems used to obtain information on employed and unemployed persons. The ILOSTAT website provides a comprehensive description of the methodology underlying the labour series.

Table 20: Unemployment

Figures are presented in absolute numbers and in percentages. Data are normally annual averages of monthly, quarterly or semi-annual data.

Unemployment" is defined to include persons above a certain age who, during a specified period of time were:

- (a) "Without work", i.e. were not in paid employment or self-employment;
- (b) "Currently available for work", i.e. were available for paid employment or self-employment during the reference period; and
- (c) "Seeking work", i.e. had taken specific steps in a specified period to find paid employment or self-employment

Persons not considered to be unemployed include:

- (a) Persons intending to establish their own business or farm, but who had not yet arranged to do so and who were not seeking work for pay or profit;
- (b) Former unpaid family workers not at work and not seeking work for pay or profit.

The series generally represent the total number of persons wholly unemployed or temporarily laid-off. Percentage figures, where given, are calculated by comparing the number of unemployed to the total members of that group of the labour force on which the unemployment data are based.

Table 21: Employment by economic activity

The employment table presents absolute figures on the distribution of employed persons by economic activity, according to International Standard Industry Classification (ISIC) version 3. The column for total employment includes economic activities not adequately defined and that are not accounted for in the other categories. Data are arranged as far as possible according to the major divisions of economic activity of the International Standard Industrial Classification of All Economic Activities.

Chapter IX: Price and production indices

Table 22: Consumer price indices

A consumer price index is usually estimated as a series of summary measures of the period-to-period proportional change in the prices of a fixed set of consumer goods and services of constant quantity and characteristics, acquired, used or paid for by the reference population. Each summary measure is constructed as a weighted average of a large number of elementary aggregate indices. Each of the elementary aggregate indices is estimated using a sample of prices for a defined set of goods and services obtained in, or by residents of, a specific region from a given set of outlets or other sources of consumption goods and services. The table presents the general consumer price index for all groups of consumption items combined, and the food index including non-alcoholic beverages only. Where alcoholic beverages and/or tobacco are included, this is indicated in footnotes.

Table 23: Producer Price Indices

Producer prices are prices at which producers sell their output on the domestic market. Producer price indices normally cover the prices of the characteristic products of agriculture, forestry, and fishing, mining and quarrying, manufacturing, and electricity, gas and water supply. Prices are normally measured in terms of transaction prices, including non-deductible indirect taxes less subsidies, in the case of domestically produced goods and import duties and other non-deductible indirect taxes less subsidies in the case of imported goods. The Laspeyres index number formula is generally used. The price indices for each country are arranged according to the following scheme:

| (a) | Components of supply | (b) | Stage of processing |
|-----|---|-----|---------------------|
| | Domestic supply | | Raw materials |
| | Domestic production for domestic market | | Intermediate goods |
| | Agricultural products | (c) | End-use |
| | Industrial products | | Consumer goods |
| | Imported goods | | Capital goods |

The source for this table is the United Nations *Monthly Bulletin of Statistics*, see <http://unstats.un.org/unsd/mbs> for further information. Data are mainly obtained from country questionnaire related to this publication and where necessary rebased to a uniform base period, which is currently 2005=100. This operation does not involve any change in the weighting systems used by the countries. For a more detailed explanation about the PPI, please refer to the *Producer Price Index Manual: Theory and Practice* published by the International Monetary Fund in 2004.

Table 24: Agricultural production

“Agriculture” relates to the production of all crops and livestock products. The “Food Index” includes those commodities which are considered edible and contain nutrients. The index numbers of agricultural output and food production are calculated by the Laspeyres formula with the base year period 2004-2006. The latter is provided in order to diminish the impact of annual fluctuations in agricultural output during base years on the indices for the period. Production quantities of each commodity are weighted by 2004-2006 average national producer prices and summed for each year. The index numbers are based on production data for a calendar year. These may differ in some instances from those actually produced and published by the individual countries themselves due to variations in concepts, coverage, weights and methods of calculation. Efforts have been made to estimate these methodological differences to achieve a better international comparability of data. Detailed data on agricultural production are published by FAO in its *Statistical Yearbook*.

Table 25: Index of industrial production

The United Nations Statistics Division collects, compiles and publishes monthly, quarterly and yearly indices of industrial production through a questionnaire sent to national statistical offices. The indices are compiled according to the International Standard Industrial Classification of all Economic Activities (ISIC), Rev.4 categories, at the 2-digit level, for sections B-E of the classification, i.e. "Mining and quarrying", "Manufacturing", "Electricity, gas, steam and air conditioning supply" and "Water supply; sewerage, waste management and remediation activities". For countries that continue to use ISIC Rev.3, these data are still being collected and published. The collection of these index numbers was started in 1953 and is currently disseminated through the following United Nations publications: the *Monthly Bulletin of Statistics*, *Statistical Yearbook*, and the *World Statistics Pocket Book*.

The weights used in the calculation of the indices for a particular country represent the gross value added in basic prices of the contributing industries. Methodological guidelines for these index numbers are available in the "International Recommendations for the Index of Industrial Production 2010". The indices in the United Nations Statistical Yearbook are currently published with 2005 as a base year.

Chapter X: Agriculture, forestry and fishing

The series shown on agriculture and fishing have been furnished by the Food and Agriculture Organization of the United Nations (FAO). They refer mainly to the long-term trends in the growth of agricultural output and the food supply, the output of principal agricultural commodities and fish production.

Agricultural production is defined to include all crops and livestock products except those used for seed and fodder and other intermediate uses in agriculture; for example deductions are made for eggs used for hatching. Intermediate input of seeds and fodder and similar items refer to both domestically produced and imported commodities. For further details, reference may be made to *FAO Statistical Yearbook*. FAO data are also available through the Internet at <http://faostat3.fao.org>.

Table 26: Cereals

The data on the production of cereals relate to crops harvested for dry grain only. Cereals harvested for hay, green feed or used for grazing are excluded.

Table 27: Meat and fish

The data on meat production refer to animals slaughtered within the national boundaries irrespective of the origin of the animals. Production figures of cattle, chicken, buffalo, pig (including bacon and ham), sheep and goat meat are in terms of carcass weight, excluding edible offal, tallow and lard. All data refer to total meat production from both commercial and farm slaughter. The data on fish production refer to both (i) capture production from marine and inland fisheries and (ii) aquaculture, and are expressed in terms of live weight. They include fish, crustaceans, molluscs and other aquatic vertebrates (such as frogs and river turtles) and invertebrates (such as sea cucumbers and sea urchins). But they exclude sponges, corals, pearls, seaweed, crocodiles and aquatic mammals (such as whales and dolphins). The flag of the vessel is considered as the paramount indication of the nationality of the catch. Marine fisheries data include landings by domestic craft in foreign ports and exclude landings by foreign craft in domestic ports. To separate aquaculture from capture fisheries production, at least two criteria must apply i.e., the human intervention in one or more of the phases of the growth cycle, and individual, corporate or state ownership of the organism reared and harvested. Data are published in the *FAO Yearbook of Fishery Statistics*.

Table 28: Roundwood

The data on roundwood refer to wood in the rough, wood in its natural state as felled or otherwise harvested, with or without bark, round, split, roughly squared or in other form (i.e. roots, stumps, burls, etc.). It may also be impregnated (e.g. telegraph poles) or roughly shaped or pointed. It comprises all wood obtained from removals, i.e. the quantities removed from forests and from trees outside the forest, including wood recovered from natural, felling and logging losses during the period—calendar year or forest year.

Chapter XI: Manufacturing

The Industrial Commodity Production Statistics Database (available at <http://unstats.un.org/unsd/industry>) contains data on production of industrial commodities from about 200 countries and areas based on a list of about 600 commodities. It is the basis for the publication of *Industrial Commodity Statistics Yearbook (Volume I and II)*, a publication prepared by the Statistics Division of the Department for Economic and Social Affairs of the United Nations Secretariat with the generous co-operation of national statistical offices. A historical series of commodity data are available back to 1950 but only a series, based on the current commodity classification, from 1995 is available in the current database available online.

The Industrial Commodity Production Statistics Database is based on the data obtained from the United Nations Questionnaire on Industrial Commodity Production Statistics, which in turn is based on the definitions of the products from the Central Product Classification (CPC) Version 1.1 and the Harmonized Commodity Description and Coding

System (HS) 2002. The data cover products produced by mining, manufacturing and electricity and gas units, i.e. units classified in sections B, C, and D of the International Standard Industrial Classification of All Economic Activities (ISIC) Revision 4, whether as primary or secondary production. The data from the country questionnaires are supplemented with information from publications of other specialized agencies and intergovernmental bodies.

Data reported for the products reflect value and volume of production sold during the survey period, which is defined as the production carried out at some time, which has been sold (invoiced) during the reference period. A number of countries have been able to provide data only based on the “Prodcom list”, used by the European Community for statistics on industrial products, rather than the CPC-based codes used in this publication. Whenever possible, the Prodcom-based data has been converted into the aggregations necessary for this publication. While information has been collected from countries in terms of national currencies, the data have been converted to US dollars to facilitate comparison among countries. The CPC classification and its relation or correspondence to other classifications as well as the methodology for conversion to US dollars are described in the latest edition of the *Industrial Commodity Statistics Yearbook Volume I and II*.

Table 29: Raw sugar (CPC code: 23510-0) production refers to raw cane or beet sugar not containing added flavouring or colouring matter.

Table 30: Beer (24310-0) production refers to beer made from malt.

Table 31: Cement (37440-0) production refers to Portland cement, aluminous cement, slag cement and similar hydraulic cements, except in the form of clinkers.

Table 32: Woven cotton and wool (26500-1 & 26600-0) production refers to two commodities; i.) woven fabrics of carded or combed wool or of carded or combed fine animal hair for clothing, home furnishing textiles, household linens or for technical or industrial uses; ii.) woven fabrics of cotton, containing 85 per cent or more by weight of cotton, unbleached, bleached, dyed, of yarns of different colours and printed; woven fabrics of cotton, containing less than 85 per cent by weight of cotton, mixed mainly or solely with man-made fibres, unbleached, bleached, dyed, of yarns of different colours and printed and other woven fabrics of cotton.

Table 33: Pig iron and crude steel (41111-0 & 41120-0) production refers to two commodities; i.) non-alloy pig iron, alloy pig iron and spiegeleisen, in pigs, blocks or other primary forms; ii.) ingots, other primary forms, and semi-finished products of iron, non-alloy steel, stainless steel or other alloy steel.

Chapter XII: International merchandise trade

The *International Trade Statistics Yearbook* (ITSY) provides an overview of the latest trends of trade in goods and services of most countries and areas in the world, a publication prepared by the Statistics Division of the Department for Economic and Social Affairs of the United Nations Secretariat. The yearbook, see <http://comtrade.un.org/pb/>, is released in two volumes; Volume I is compiled earlier in the year to present an advanced overview of international merchandise trade from the previous year, Volume II, generally released six months later, contains detailed tables showing international trade for individual commodities and 11 world trade tables covering trade values and indices. Volume II also contains updated versions of world trade tables, for example Table 34 in this yearbook. The tables in this yearbook are also updated monthly (Table 34) or quarterly (Table 35) in the United Nations Monthly Bulletin of Statistics and on the trade statistics website, see <http://unstats.un.org/unsd/trade/data/tables.asp#annual>.

The statistics in this Yearbook have been compiled by national statistical authorities largely consistent with the United Nations recommended International Merchandise Trade Statistics, Concepts and Definitions 2010 (IMTS 2010). Depending on what parts of the economic territory are included in the statistical territory, the trade data-compilation system adopted by a country (its trade system) may be referred to as general or special.

| | |
|----------------------|--|
| General trade system | The statistical territory coincides with the economic territory. Consequently, it is recommended that the statistical territory of a country applying the general trade system comprises all applicable territorial elements. In this case, imports include goods entering the free circulation area, premises for inward processing, industrial free zones, premises for customs warehousing or commercial free zones and exports include goods leaving those territorial elements |
| Special trade system | (strict definition) The statistical territory comprises only a particular part of the economic territory, so that certain flows of goods which are in the scope of IMTS 2010 are not included in either import or export statistics of the compiling country. The strict definition of the special trade system is in use when the statistical territory comprises only the free circulation area, that is, the part within which goods “may be disposed of without customs restriction”. Consequently, in such a case, imports include only goods entering the free circulation area of a compiling country and exports include only goods leaving the free circulation area of a compiling country |
| | (relaxed definition) (a) goods that enter a country for, or leave it after, inward processing, as well as (b) goods that enter or leave an industrial free zone, are also recorded and included in international merchandise trade statistics |

Generally, all countries report their detailed merchandise trade data according to the Harmonized Commodity Description and Coding System (HS) and the data correspond and are then presented by Standard International Trade Classifications (SITC, Rev.3). Data refer to calendar years; however, for those countries which report according to some other reference year, the data are presented in the year which covers the majority of the reference year used by the country.

FOB-type values include the transaction value of the goods and the value of services performed to deliver goods to the border of the exporting country. CIF-type values include the transaction value of the goods, the value of services performed to deliver goods to the border of the exporting country and the value of the services performed to deliver the goods from the border of the exporting country to the border of the importing country. Therefore, data for the statistical value of imported goods are presented as a CIF-type value and the statistical value of exported goods as an FOB-type value.

Conversion of values from national currencies into United States dollars is done by means of currency conversion factors based on official exchange rates. Values in currencies subject to fluctuation are converted into United States dollars using weighted average exchange rates specially calculated for this purpose. The weighted average exchange rate for a given currency for a given year is the component monthly factors, furnished by the International Monetary Fund in its International Financial Statistics publication, weighted by the value of the relevant trade in each month; a monthly factor is the exchange rate (or the simple average rate) in effect during that month. These factors are applied to total imports and exports and to the trade in individual commodities with individual countries.

Table 34: Total imports, exports and balance of trade

Figures on the total imports and exports of countries (or areas) presented in this table are mainly taken from International Financial Statistics published monthly by the International Monetary Fund (IMF) but also from other sources such as national publications and websites and the United Nations *Monthly Bulletin of Statistics* Questionnaire, see the *International Trade Statistics Yearbook* for further details. Estimates for missing data are made in order to arrive to regional totals but are otherwise not shown. The estimation process is automated using quarterly year-on-year growth rates for the extrapolation of missing quarterly data (unless quarterly data can be estimated using available monthly data within the quarter). The conversion factors applied to data in this table are published quarterly in the United Nations *Monthly Bulletin of Statistics* and are also available on the United Nations trade statistics website: <http://unstats.un.org/unsd/trade/data/tables.asp#annual>.

Table 35: Imports and exports, volume and value indices

This table shows the volume and unit value (or price) indices for total exports and imports as well as the terms of trade and purchasing power of exports for individual countries or areas in U.S. dollars and with the year 2000 as base year. The volume and unit value/price indices are as compiled by countries. They show the changes in the volume (volume index) and the average price (unit value/price index) of total imports and exports. Using these indices UNSD calculates the terms of trade indices (export unit value/price indices divided by the corresponding import unit value/price indices), and the index of the purchasing power of exports (the terms of trade multiplied by the volume index of exports). The data are obtained from similar sources as Table 34. The missing data required for the calculation of regional totals are estimated using a variety of methods and additional data sources. All estimates are reviewed and adjusted where necessary.

Chapter XIII: Energy

The Energy Statistics Yearbook (available at <http://unstats.un.org/unsd/energy/yearbook>) is a comprehensive collection of international energy statistics for over 220 countries and areas. The yearbook is prepared by the Statistics Division of the Department for Economic and Social Affairs of the United Nations Secretariat. The yearbook is produced every year with newly available data on energy production, trade, stock changes, bunkers and consumption for all countries and areas, and a historical series back to 1950 are available. The data are compiled primarily from the annual energy questionnaire distributed by the United Nations Statistics Division and supplemented by official national statistical publications, as well as publications from international and regional organizations. Where official data are not available or are inconsistent, estimates are made by the Statistics Division based on governmental, professional or commercial materials.

The period to which the data refer is the calendar year, with the exception of the data of the following countries which refer to the fiscal year: Afghanistan and Iran (Islamic Rep. of) – beginning 21 March of the year stated; Australia, Bangladesh, Bhutan, Egypt (for the latter two, electricity only), Nepal - ending June of the year stated; Pakistan - starting July of the year stated; India, Myanmar and New Zealand – beginning April of the year stated. Data on a per capita basis use population data from the United Nations Population Division as a denominator.

Table 36: Energy commodities

The data on production refer to the first stage of production: accordingly, for hard coal the data refer to mine production; for briquettes to the output of briquetting plants; for crude petroleum and natural gas to production at oil and gas wells; for natural gas liquids to production at wells and processing plants; for refined petroleum products to gross refinery output; for cokes and coke-oven gas to the output of ovens; for other manufactured gas to production at gas works, blast furnaces or refineries; and for electricity to the gross production of generating plants. The definitions of the energy commodities presented in the table can be found in the Energy Statistics Yearbook (see <http://unstats.un.org/unsd/energy/yearbook>)

Chapter XIV: Environment

Table 37: Land

The data on land are compiled by the Food and Agriculture Organization of the United Nations (FAO). FAO's definitions of the land categories are as follows:

| | |
|-----------------|---|
| Land area | Total area excluding area under inland water bodies. The definition of inland water bodies generally includes major rivers and lakes |
| Arable land | Land under temporary crops (multiple cropped areas are counted only once); temporary meadows for mowing or pasture; land under market and kitchen gardens; and land temporarily fallow (less than five years). Abandoned land resulting from shifting cultivation is not included in this category. Data for "arable land" are not meant to indicate the amount of land that is potentially cultivable. |
| Permanent crops | Land cultivated with crops that occupy the land for long periods and need not be replanted after each harvest, such as cocoa, coffee and rubber. This category includes land under flowering shrubs, fruit trees, nut trees and vines, but excludes land under trees grown for wood or timber |

| | |
|--------|--|
| Forest | In the Global Forest Resources Assessment 2010 the following definition is used for forest: Land spanning more than 0.5 hectares with trees higher than 5 metres and a canopy cover of more than 10 percent, or trees able to reach these thresholds in situ. It does not include land that is predominantly under agricultural or urban land use. |
|--------|--|

Table 38: Threatened species

Data on the number of threatened species in each group of animals and plants are compiled by the World Conservation Union (IUCN)/ Species Survival Commission (SSC) and published in the IUCN Red List of Threatened Species. The list provides a catalogue of those species that are considered globally threatened. The number of threatened species for any particular country will change between years for a number of reasons, including:

- New information being available to refine the assessment (e.g., confirmation that the species occurs or does not occur in a particular country, confirmation that the species is or is not threatened, etc.)
- Taxonomic changes (e.g., what was previously recognised as one species is now split into several separate species, or has now been merged with another species).
- Corrections (e.g., the previous assessment may have missed a particular country out of its country occurrence list or included a specific country by mistake).
- Genuine status changes (e.g., a species may have genuinely deteriorated or improved in status and therefore has moved into or out of the threatened categories).

The categories used in the Red List are as follows; extinct, extinct in the wild, critically endangered; endangered, vulnerable, near threatened and data deficient.

Table 39: CO₂ emissions estimates

The source of the data presented on the emissions of carbon dioxide (CO₂) is the Carbon Dioxide Information Analysis Centre (CDIAC) of the Oak Ridge National Laboratory in the USA, see <http://cdiac.ornl.gov/>. The CDIAC estimates of CO₂ emissions are derived primarily from United Nations energy statistics on the consumption of liquid and solid fuels and gas consumption and flaring, and from cement production estimates from the Bureau of Mines of the U.S. Department of Interior. The emissions presented in the table are in units of 1,000 metric tons of CO₂; to convert CO₂ into carbon, divide the data by 3.667. Full details of the procedures for calculating emissions are given in Global, Regional, and National Annual CO₂ Emissions Estimates from Fossil Fuel Burning, Hydraulic Cement Production, and Gas Flaring and on the CDIAC web site. Relative to other industrial sources for which CO₂ emissions are estimated, statistics on gas flaring activities are sparse and sporadic. In countries where gas flaring activities account for a considerable proportion of the total CO₂ emissions, the sporadic nature of gas flaring statistics may produce spurious or misleading trends in national CO₂ emissions over the period covered by the table.

Table 40: Water supply and sanitation coverage

The proportion of the population with sustainable access to an improved water source, urban and rural, is the percentage of the population who use any of the following types of water supply for drinking: piped water, public tap, borehole or pump, protected well, protected spring or rainwater. Improved water sources do not include vendor-provided water, bottled water, tanker trucks or unprotected wells and springs. Proportion of the urban and rural population with access to improved sanitation refers to the percentage of the population with access to facilities that hygienically separate human excreta from human, animal and insect contact. Facilities such as sewers or septic tanks, poor flush latrines and simple pit or ventilated improved pit latrines are assumed to be adequate, provided that they are not public. To be effective, facilities must be correctly constructed and properly maintained. The data are estimated by the WHO/UNICEF Joint Monitoring Programme for Water Supply and Sanitation (JMP) based on available country sources, see www.wssinfo.org for further information.

Chapter XV: Science and technology

Research and experimental development (R&D) is defined as creative work undertaken on a systematic basis in order to increase the stock of knowledge, including knowledge of humanity, culture and society, and the use of this stock of knowledge to devise new applications. More information can be found on the UNESCO Institute for Statistics web site www.uis.unesco.org.

Table 41: Gross domestic expenditure on research and development

The data presented on gross domestic expenditure on research and development are compiled by the UNESCO Institute for Statistics. Data for certain countries are provided to UNESCO by OECD, EUROSTAT and the Network on Science and Technology Indicators (RICYT). Gross domestic expenditure on R&D (GERD) is total intramural expenditure on R&D performed on the national territory during a given period. It includes R&D performed within a country and funded from abroad but excludes payments made abroad for R&D. The sources of funds for GERD are classified according to the following five categories:

| | |
|---------------------------|--|
| Business enterprise funds | Funds allocated to R&D by all firms, organizations and institutions whose primary activity is the market production of goods and services (other than the higher education sector) for sale to the general public at an economically significant price, and those private non-profit institutes mainly serving these firms, organizations and institutions. |
| Government funds | Funds allocated to R&D by all departments, offices and other bodies which furnish, but normally do not sell to the community, those common services, other than higher education, which cannot otherwise be conveniently and economically provided, as well as those that administer the state and the economic and social policy of the community. Public enterprises, mainly engaged in market production and sale of goods and services, funds are included in the business enterprise funds sector. Government funds also include private non-profit institutes controlled and mainly financed by government, not administered by the higher education sector. |
| Higher education funds | Funds allocated to R&D by institutions of higher education comprising all universities, colleges of technology, other institutions providing tertiary education (i.e. ISCED 5, 6, 7 or 8), whatever their source or finance or legal status. They also include all research institutes, experimental stations and clinics operating under the direct control of or administered by or associated with higher education institutions. |
| Private non-profit funds | Funds allocated to R&D by non-market, private non-profit institutions serving households (i.e. the general public), as well as by private individuals and households. |
| Funds from abroad | Funds allocated to R&D by all institutions and individuals located outside the political borders of a country; and all international organizations (except business enterprises), including facilities and operations within the country's borders. |

The absolute figures for R&D expenditure should not be compared country by country. Such comparisons would require the conversion of national currencies into a common currency by means of special R&D exchange rates. Official exchange rates do not always reflect the real costs of R&D activities and comparisons that are based on such rates can result in misleading conclusions, although they can be used to indicate a gross order of magnitude.

Table 42: Patents

A patent is granted by a national patent office or by a regional office that does the work for a number of countries, such as the European Patent Office and the African Regional Intellectual Property Organisation. Under such regional systems, an applicant requests protection for the invention in one or more countries, and each country decides as to whether to offer patent protection within its borders. The World Intellectual Property Organisation (WIPO) administered Patent Cooperation Treaty (PCT) provides for the filing of a single international patent application which has the same effect as national applications filed in the designated countries. Data include resident intensity, patents granted and patents in force. Patent intensity is presented as the resident patent filings per million population, where as resident Intellectual Property (IP) filling refers to an application filed by an applicant at its national IP office. IP grant (registration) data are based on the same concept. In force refers to a patent or other form of IP protection that is currently valid. Country of origin is used to categorise IP data by resident (domestic) and non-resident (foreign). The residence of the first-named applicant (or inventor) recorded in the IP document (e.g. patent or trademark application) is used to classify IP data by country of origin. The data are compiled and published by the WIPO.

Chapter XVI: Communication

The statistics included in Tables 43 to 44 were obtained from the statistics database (see www.itu.int) and the *Yearbook of Statistics*, Telecommunication Services of the International Telecommunication Union.

Table 43: Cellular mobile telephone subscribers

The number of mobile cellular telephone subscribers (as well as the number of subscribers per 100 inhabitants) refers to users of portable telephones subscribing to an automatic public mobile telephone service using cellular technology, which provides access to the Public Switched Telephone Network (PSTN). Users of both post-paid subscriptions and pre-paid accounts are included. The number of subscribers per 100 inhabitants is calculated by dividing the number of subscribers by the population and multiplying by 100.

Table 44 Internet usage

The table shows percentage of individuals using the internet and replaces the statistics shown in previous yearbooks such as the “Number (thousands) of fixed (wired) internet subscriptions” and “fixed (wired) internet subscriptions per 100 inhabitants”. Besides capturing the use of the Internet, this indicator is able to measure changes in Internet access and use. In countries where many people access the Internet at work, at school, at cybercafés or other public locations, increases in public access serve to increase the number of users despite limited numbers of Internet subscriptions and of households with Internet access. Developing countries especially tend to have many Internet users per Internet subscriptions, reflecting that home access is not the primary location of access.

Chapter XVII: International tourism and transport

The data on international tourism have been supplied by the World Tourism Organization (UNWTO) from detailed tourism information published in either the *Yearbook of Tourism Statistics* or *Compendium of Tourism Statistics*, see www.unwto.org/statistics for further information. For statistical purposes, the term “international visitor” describes “any person who travels to a country other than that in which he/she has his/her usual residence but outside his/her usual environment for a period not exceeding 12 months and whose main purpose of visit is other than the exercise of an activity remunerated from within the country visited”. There are four series presented in the UNWTO *yearbook* and *compendium*, but only one series is selected to be presented in this yearbook, generally based on the following priority order to best describe an “international visitor”;

| Order | Series code | Series name |
|-------|-------------|---|
| 1 | TF | <i>Arrivals of non-resident tourists at national borders</i> are visitors who stay at least one night in a collective or private accommodation in the country visited (excludes same-day visitors) |
| 2 | VF | <i>Arrivals of non-resident visitors at national borders</i> are visitors as defined in series “TF” as well as same-day visitors who do not spend the night in a collective or private accommodation in the country visited |
| 3 | TCE | <i>Arrivals of non-resident tourists in all types of accommodation establishments</i> |
| 4 | THS | <i>Arrivals of non-resident tourists in hotels and similar establishments</i> |

The figures do not include immigrants, residents in a frontier zone, persons domiciled in one country or area and working in an adjoining country or area, members of the armed forces and diplomats and consular representatives when they travel from their country of origin to the country in which they are stationed and vice-versa. The figures also exclude persons in transit who do not formally enter the country through passport control, such as air transit passengers who remain for a short period in a designated area of the air terminal or ship passengers who are not permitted to disembark. This category includes passengers transferred directly between airports or other terminals. Other passengers in transit through a country are classified as visitors.

Table 45: Tourist/visitor arrivals and tourism expenditure

Data on arrivals of non-resident (or international) visitors may be obtained from different sources. In some cases data are obtained from border statistics derived from administrative records (police, immigration, traffic counts and other types of controls), border surveys and registrations at accommodation establishments. Totals correspond to the total number of arrivals from the regions indicated in the table. When a person visits the same country several times a year, an equal number of arrivals is recorded. Likewise, if a person visits several countries during the course of a single trip,

his/her arrival in each country is recorded separately. Consequently, arrivals cannot be assumed to be equal to the number of persons travelling.

Expenditure associated with tourism activity of visitors has been traditionally identified with the travel item of the Balance of Payments (BOP): in the case of inbound tourism, those expenditures in the country of reference associated with non-resident visitors are registered as “credits” in the BOP and refer to “travel receipts”. The new conceptual framework approved by the United Nations Statistical Commission in relation to the measurement of tourism macroeconomic activity (the so-called Tourism Satellite Account) considers that “tourism industries and products” includes transport of passengers. Consequently, a better estimate of tourism-related expenditures by resident and non-resident visitors in an international scenario would be, in terms of the BOP, the value of the travel item plus that of the passenger transport item. Nevertheless, users should be aware that BOP estimates include, in addition to expenditures associated with visitors, those related to other types of individuals. The data published should allow international comparability and therefore correspond to those published by the International Monetary Fund and provided by the Central Banks, any exceptions are listed within the *Compendium of Tourism Statistics* and the *Yearbook of Tourism Statistics*, see www.unwto.org/statistics for further information.

Table 46: Outbound tourism

Outbound tourism includes departures (in thousands) as well as expenditure in million US dollars. Indicators on expenditure (in other countries) are equivalent to those for inbound tourism but are registered as “debits” in the BOP’s travel and passenger transport items. The data published are also provided by the International Monetary Fund and the same previous warning is applicable. More detailed tourism information from the World Tourism Organization is available in the *Compendium of Tourism Statistics*, see <http://www.unwto.org/statistics>; and information on the balance of payments is published by the International Monetary Fund in the *Balance of Payments Statistics Yearbook*.

Table 47: Civil aviation: scheduled airline traffic

The data on civil aviation are published annually in the Annual Report of the Council of the International Civil Aviation Organisation. The data are based on reported data as well as estimates for the non-reporting airlines. Data for total traffic cover both domestic and international scheduled services operated by airlines registered in each country. Scheduled services include supplementary services occasioned by overflow traffic on regularly scheduled trips and preparatory flights for newly scheduled services. The data are prepared by the International Civil Aviation Organisation (see www.icao.int). The following terms have been used in the table:

- Kilometers flown – aircraft kilometres performed, which is the sum of the products obtained by multiplying the number of revenue flight stages flown by the corresponding stage distance.
- Passengers carried – the number of passengers carried is obtained by counting each passenger on a particular flight (with one flight number) once only and not repeatedly on each individual stage of that flight, with a single exception that a passenger flying on both the international and domestic stages of the same flight should be counted as both a domestic and international passenger.
- Passenger-kilometres performed – a passenger kilometre is performed when a passenger is carried one kilometre. Calculation of passenger-kilometres equals the sum of the products obtained by multiplying the number of revenue passengers carried on each flight stage by the stage distance. The resultant figure is equal to the number of kilometres travelled by all passengers.
- Tonne-kilometres performed – a metric tonne of revenue load carried one kilometre. Tonne-kilometres performed equals the sum of the product obtained by multiplying the number of total tonnes of revenue load (passengers, freight and mail) carried on each flight stage by the stage distance.

Chapter XVIII: Development assistance

Table 48: Net disbursements of official development assistance to recipients

The table presents estimates of flows of financial resources to individual recipients either directly (bilaterally) or through multilateral institutions (multilaterally). The multilateral institutions include the World Bank Group, regional banks, financial institutions of the European Union and a number of United Nations institutions, programmes and trust funds. The source of data is the Development Assistance Committee (DAC) of OECD to which member countries reported data on their flow of resources to developing countries and territories, countries and territories in transition, and multilateral institutions. Additional information on definitions, methods and sources can be found in OECD’s

Geographical Distribution of Financial Flows to Developing Countries publication, also see <http://stats.oecd.org/> for further information.

Table 49: Net disbursements of official development assistance from donors

The table presents the development assistance expenditures of donor countries. This table includes donors' contributions to multilateral agencies; therefore, the overall totals differ from those in table 48, which include disbursements by multilateral agencies.

Table 50: Socio-economic development assistance through the United Nations system - Development grants

The table includes data on expenditures on operational activities for development undertaken by the organizations of the United Nations system. Operational activities encompass, in general, those activities of a development cooperation character that seek to mobilize or increase the potential and capacity of countries to promote economic and social development and welfare, including the transfer of resources to developing countries or regions in a tangible or intangible form. Expenditures on operational activities for development are financed from contributions from governments and other official and non-official sources to a variety of funding channels in the United Nations system. These include United Nations funds and programmes such as contributions to the United Nations Development Programme, contributions to funds administered by the United Nations Development Programme, and regular (assessed) and other extra budgetary contributions to specialized agencies. Data are taken from the 2013 report of the Secretary-General to the General Assembly on operational activities for development.

Annexe II: Notes techniques

Chapitre I: Aperçu mondial et régional

Tableau 1: Statistiques mondiales – séries principales

Les séries d'agrégats mondiaux sur la population, la production et le commerce extérieur ont été établies à partir de publications statistiques et bases de données des Nations Unies et les institutions spécialisées et autres organismes. On doit se référer aux sources pour tous renseignements détaillés sur les méthodes de calcul et la portée des statistiques.

Chapitre II: Population

Tableau 2: Population, taux d'accroissement, taux de natalité, taux de mortalité, superficie et densité

Les estimations de population au milieu d'année, le taux d'accroissement annuel, les taux bruts de natalité et de mortalité et la densité proviennent des estimations et des projections de la Division de la population des Nations Unies et publiées dans *Perfectives de la population mondiale: Révision de 2015*. "Superficie" est extraite de *l'Annuaire démographique 2013* qui contient uniquement les données nationales officielles.

Les estimations de population au milieu de l'année indique la population de facto dans un pays, une zone ou une région à partir du 1er Juillet de l'année indiquée, et sont présentées en millions.

Le taux d'accroissement annuel est la moyenne du taux de croissance exponentiel de la population sur une période donnée. Exprimé en pourcentage, le taux est calculé à partir de la formule $\ln(P_t / P_0) / t$, où t est la durée de la période.

Le taux brut de natalité est le rapport entre le nombre de naissances au cours d'une période donnée à années vécues par la population au cours de cette période. Elle est exprimée en nombre annuel moyen de naissances par 1000 habitants. De même, le "taux brut de mortalité" est le nombre de décès sur une période donnée divisée par les années vécues par la population au cours de cette période. Elle est exprimée en nombre annuel moyen de décès pour 1000 habitants.

La densité de la population est exprimée kilomètre carré.

Les estimations de superficie comprennent les eaux intérieures.

Tableau 3: Sélection d'indicateurs de l'espérance de vie, de la maternité, de la dépendance et de la mortalité

L'espérance de vie à la naissance, le taux de fécondité, le taux de dépendance, et le taux de mortalité infantile proviennent des estimations et projections de la Division de la population de l'ONU, publiées dans *World Population Prospects: The 2015 Revision*. Complétées par des données de l'Organisation des Nations Unies, Division de statistique, New York, Annuaire démographique 2013 et Secrétariat de la Communauté du Pacifique (CPS) pour petits pays ou zones. La mortalité maternelle sont des estimations de l'Organisation mondiale de la santé, de l'UNICEF, du Fonds des Nations Unies pour la Population, de la Banque mondiale et de la Division de la population de l'ONU publiées dans *Trends in Maternal Mortality: 1990 to 2015*.

L'espérance de vie à la naissance est une estimation globale du nombre d'années qu'un nouveau-né de sexe masculin ou féminin vivant, peut s'attendre à vivre. Comme dans beaucoup de pays en développement, les registres d'état civil ne permettent pas d'établir des statistiques fiables et complètes des naissances et des décès, diverses techniques d'estimation ont été utilisées pour calculer l'espérance de vie à partir d'autres sources et notamment des recensements et enquêtes démographiques. Sur la base des statistiques de l'espérance de vie par sexe, on peut calculer la différence entre la longévité à tous les âges. Cependant, ce sont les tendances et les écarts des taux de mortalité infantile et juvénile qui influent de façon prépondérante sur les tendances et les écarts de l'espérance de vie à la naissance dans la plupart des pays en développement. Ainsi, l'espérance de vie à la naissance ne revêt qu'une utilité limitée dans ce pays pour évaluer les niveaux et les écarts de la mortalité à des âges plus avancés.

Le taux de fécondité est le nombre moyen d'enfants que mettrait au monde une cohorte hypothétique de femmes si, pendant toutes leurs années d'âge reproductif, les taux de fécondité par âge de l'année en question restaient inchangés.

Le rapport de dépendance est le rapport entre le nombre de personnes âgées de moins de 15 ans et les personnes âgées de plus de 64 ans pour 100 personnes de la population entre 15 et 64 ans pour 1 000 naissances vivantes, le "taux de mortalité infantile" est le rapport entre le nombre d'enfants décédés avant d'atteindre l'âge d'un an et l'ensemble des enfants nés vivants. Dans la majorité des pays en développement, où les données d'état civil sont déficientes, les sources les plus fiables sont les enquêtes démographiques auprès des ménages. Lorsque de telles enquêtes ne sont pas

réalisées, d'autres sources sont utilisées et des estimations générales sont réalisées qui est nécessairement d'une fiabilité limitée. Lorsqu'il n'y a pas dans les pays de systèmes complets et exacts d'enregistrement des faits d'état civil, les statistiques de la mortalité infantile par sexe sont difficiles à rassembler ou à estimer avec quelque fiabilité que ce soit en raison des distorsions de la notification; elles ne sont donc pas indiquées ici.

Le "taux de mortalité maternelle" est le rapport entre le nombre de décès maternels survenant pendant la grossesse, l'accouchement ou dans les 42 jours suivant la fin de la grossesse par le nombre d'accouchements et exprimé en décès par 100 000 accouchements. Un décès maternel est défini comme le décès d'une femme survenu au cours de la grossesse ou dans un délai de 42 jours suivant sa terminaison, quelle qu'en soit la durée ou la localisation, pour une cause quelconque déterminée ou aggravée par la grossesse ou les soins qu'elle a motivés, mais ni accidentelle ni fortuite

Tableau 4: Population et taux de croissance dans les zones urbaines et capitales

Les statistiques sur la population dans la capitale, la population urbaine, la population rurale et les taux d'accroissement de chaque pays ou zone sont des estimations et projections publiées par la Division de la population du Département des affaires économiques et sociales du Secrétariat des Nations Unies dans *Perspectives d'urbanisation, révision 2014*. Il n'existe pas de définition reconnue à l'échelle internationale des zones urbaines et rurales parce que les caractéristiques retenues pour distinguer ces deux types de zone diffèrent d'un pays à un autre. Dans la plupart des pays, cette distinction est essentiellement une fonction de la taille des agglomérations. Pour la définition la plus récente des zones urbaines utilisée dans une région ou un pays donné, se reporter à l'*Annuaire démographique*. Les taux annuels de variation des populations urbaines et rurales se calculent sur la base de la variation annuelle moyenne en pourcentage déterminée à partir des estimations de la population au milieu de l'année.

Chapitre III: La situation de femmes

Tableau 5: Proportion de sièges occupés par les femmes au parlement national

Ce tableau indique le pourcentage des sièges des chambres uniques ou basses des parlements nationaux occupés par des femmes. Données disponibles en janvier ou février de chaque année (voir les notes de tableau pour plus de détails). Les parlements nationaux peuvent être bicaméraux ou unicaméraux. Ce tableau porte sur la chambre unique des parlements unicaméraux et sur la chambre basse des parlements bicaméraux. Il ne porte pas sur la chambre haute des parlements bicaméraux. Les sièges sont habituellement attribués aux membres à l'issue d'élections parlementaires générales. Certains sièges peuvent aussi être pourvus à l'issue de nominations, d'élections indirectes, de roulement des membres et d'élections partielles. La proportion d'élues est obtenue en divisant le nombre total de sièges occupés par des femmes par le nombre total de sièges que compte le parlement. Les statistiques ne sont ni pondérées ni normalisées. La source de ce tableau est l'Union interparlementaire, voir www.ipu.org pour plus d'informations.

Tableau 6: Proportion de femmes salariées dans le secteur non agricole

La proportion des femmes rémunérées dans le secteur non agricole correspond au pourcentage du nombre total de salariés employés dans le secteur agricole qui sont des femmes. Le secteur non agricole comprend l'industrie et les services. L'"industrie" comporte les industries extractives (y compris la production pétrolière), le secteur manufacturier, le bâtiment, l'électricité, le gaz et l'eau, correspondant aux divisions 2 à 5 de la Classification internationale type, par industrie, de toutes les branches d'activité économique (CITI) et aux catégories C à F de la CITI-Rev.3. Les "services" comportent le commerce de gros et de détail, la restauration et l'hôtellerie; les transports, l'entreposage et les communications; les finances, les assurances, l'immobilier et les services commerciaux; et les services communautaires, sociaux et personnels, correspondant aux divisions 6 à 9 de la CITI-Rev.2 et aux catégories G à Q de la CITI-Rev.3.

L'emploi se rapporte aux personnes d'un âge minimum donné qui ont travaillé ou occupé un emploi pendant une période donnée de référence (conformément à la résolution de l'OIT sur les statistiques de la population économiquement active, l'emploi, le chômage et le sous-emploi, adoptée par la treizième Conférence internationale des statisticiens du travail (CIST), octobre 1982). L'emploi salarié se réfère uniquement aux travailleurs salariés ou recevant un traitement et aux personnes dans des emplois rémunérés. Les employés sont généralement rémunérés par des salaires et des traitements, mais leur rémunération peut aussi provenir de commissions, de travaux à la pièce, de primes ou d'avantages en nature tels que repas, logement, formation, etc. Il s'agit de salariés par opposition aux travailleurs indépendants – employeurs, travailleurs à leur compte, membres de coopératives de producteurs et

travailleurs familiaux. Les différentes situations d'après la profession sont définies conformément à la résolution de l'OIT concernant la Classification internationale d'après la situation dans la profession (CISP), adoptée par la quinzième Conférence internationale des statisticiens du travail (CIST) (1993). La source de ce tableau est l'Indicateurs des Objectives du Millénaire pour le développement (OMD), voir <http://mdgs.un.org> pour plus d'informations.

Tableau 7: Rapport filles/garçons dans l'enseignement primaire, secondaire et supérieur

Ce tableau indique la proportion de filles par rapport aux garçons (indice de parité des sexes) dans l'enseignement primaire, secondaire et supérieur, à savoir le rapport entre le nombre de filles inscrites dans l'enseignement primaire, secondaire et supérieur et le nombre de garçons à chaque niveau. Pour normaliser les effets de la pyramide des âges, l'indice de parité des sexes du taux brut de scolarisation pour chaque niveau d'enseignement est utilisé. La source de ce tableau est l'Institut de statistique de l'UNESCO, voir www.uis.unesco.org pour plus d'informations.

Chapitre IV: Education

Les données dans les tableaux 8 à 10 sont présentées en utilisant la Classification internationale type de l'éducation de l'UNESCO (CITE, révisée en 2011). Les données sont présentées dans les tableaux sur la base des trois principaux niveaux d'éducation définis comme suit.

L'Enseignement primaire (niveau 1 de la CITE) désigne les programmes éducatifs qui sont normalement conçus pour fournir aux étudiants les compétences de base à la lecture, à l'écriture et en mathématiques (calcul) afin d'établir une base solide pour l'apprentissage et la compréhension des principaux domaines de la connaissance, favoriser le développement personnel et social, dans le but de préparer le premier cycle du secondaire. Il met l'accent sur l'apprentissage de base avec peu ou pas de spécialisation.

L'Enseignement secondaire (niveaux 2 et 3 de la CITE) est divisé en deux parties : le premier et le second cycle du secondaire. Le premier cycle de l'enseignement secondaire est généralement conçu de manière à renforcer les acquis scolaires du primaire. Dans la plupart des cas, l'objectif est d'établir la base d'un apprentissage tout au long de la vie et d'un développement humain que les systèmes éducatifs pourront enrichir par de nouvelles possibilités d'éducation. Le deuxième cycle de l'enseignement secondaire est quant à lui conçu pour compléter l'enseignement secondaire et préparer à l'enseignement supérieur, et/ ou pour enseigner des compétences pertinentes pour exercer un emploi. Les programmes de ce niveau offrent aux élèves un enseignement plus varié, spécialisé et approfondie que les programmes du premier cycle. Ils sont davantage différenciés et proposent un éventail plus large d'options et de filières. Les enseignants sont souvent hautement qualifiés dans les matières ou domaines de spécialisation qu'ils enseignent, en particulier dans les classes supérieures.

L'Enseignement supérieur (niveaux 5 à 8 de la CITE) se fonde sur l'enseignement secondaire et offre des activités d'apprentissage dans des matières spécialisés de l'éducation. Il vise un apprentissage avec un niveau élevé de complexité et de spécialisation. L'enseignement supérieur comprend ce que l'on qualifie habituellement d'enseignement académique, mais il comprend également l'enseignement professionnel avancé. Il comprend les niveaux CITE 5, 6, 7 et 8 de la CITE, nommés respectivement enseignement supérieur de cycle court, enseignement supérieur, niveau licence ou équivalent, niveau master ou équivalent, et niveau doctorat ou équivalent. Le contenu des programmes de l'enseignement supérieur est plus complexe et plus avancé que celui des niveaux inférieurs de la CITE.

Pour plus d'informations sur la classification internationale type de l'éducation (CITE) 2011, se référer à : <http://www.uis.unesco.org/Education/Documents/iscled-2011-fr.pdf>

On trouve des données détaillées et des notes explicatives sur l'Enseignement sur le site Web de l'Institut de statistique de l'UNESCO www.uis.unesco.org. Ci-après figurent des notes sommaires, relatives aux principaux éléments d'information statistique figurant dans les tableaux 8 à 10.

Tableau 8: Enseignement primaire, secondaire et supérieur

Le tableau montre le nombre d'élèves inscrits à l'école et la proportion de filles dans les effectifs scolaires (exprimée en pourcentage du total) à chaque niveau au cours d'une année scolaire donnée.

Tableau 9: Dépenses publiques afférentes à l'éducation

Les données relatives aux dépenses publiques afférentes à l'éducation se rapportent aux dépenses courantes et en capital de l'éducation engagées par l'administration au niveau local, régional, national/ central, y inclus les municipalités. Les contributions des ménages sont exclues. Les dépenses ordinaires (ou courantes) en éducation se réfèrent aux dépenses couvrant les biens et les services consommés dans l'année en cours et qui doivent être renouvelées périodiquement. Elles comprennent les dépenses en: salaires et avantages du personnel, services achetés ou assurés sous contrat, l'achat d'autres ressources y compris les manuels scolaires et du matériel pour l'enseignement, les services sociaux et d'autres dépenses de fonctionnement telles que les subventions aux étudiants et aux ménages, les fournitures et l'équipement, les réparations légères, les combustibles, les télécommunications, les voyages, les assurances et les loyers. Dépenses en capital pour l'éducation se réfèrent aux dépenses qui couvrent l'achat de biens d'une durée supérieure à une année. Elles peuvent comprendre les dépenses de construction, de rénovation et de grosses réparations de bâtiments, ainsi que l'achat d'équipements ou véhicules.

Tableau 10: Personnel enseignant au niveau primaire, secondaire et supérieur

Le tableau montre le nombre total d'enseignants à chaque niveau ainsi que la proportion des enseignantes exprimée en pourcentage du nombre total d'enseignants (hommes et femmes) au même niveau au cours d'une année scolaire donnée. Les données proviennent de recensements ou d'enquêtes dans les écoles et des dossiers des enseignants.

Les enseignants (ou personnel enseignant) sont définis comme des personnes qui, dans l'exercice de leur métier, guident et dirigent le parcours didactique des élèves et étudiants, indépendamment de leurs qualifications et du mécanisme de transmission des connaissances (autrement dit soit face-à-face et/ou à distance). L'enseignement consiste à planifier, organiser, et mener des activités de groupe où les connaissances, aptitudes et compétences des élèves sont développés comme précisé dans le programme d'éducation. Cette définition exclut le personnel enseignant qui n'a pas de fonctions pédagogiques à la période de référence (par exemple les directeurs ou chefs d'établissements scolaires qui n'enseignent pas) et les personnes qui travaillent ponctuellement ou bénévolement dans des établissements d'enseignement.

Le personnel enseignant universitaire est le personnel employé dont la mission principale est l'enseignement et /ou la recherche. Cela comprend le personnel qui détient un grade universitaire avec des titres tels que professeur, professeur agrégé, professeur adjoint, maître de conférences ou l'équivalent. Le personnel, comme par exemple doyen, directeur, vice-doyen, doyen adjoint, président ou chef de département, est également inclus si leur activité principale est l'enseignement ou la recherche.

Chapitre V: Santé

Tableau 11: Le personnel de santé

Le tableau montre quatre grandes catégories de personnel de santé (il y a 9 catégories disponibles dans la source) : Les médecins comprennent les médecins généralistes et spécialistes; personnel infirmier et sages-femmes comprennent les infirmiers et sages-femmes qualifiés et le personnel infirmier et sages femmes de niveau intermédiaire, les accoucheuses traditionnelles ne sont pas incluses; personnel en dentisterie comprend les dentistes, les assistants, les techniciens et les thérapeutes en médecine; le personnel du secteur pharmaceutique comprend les pharmaciens, les pharmaciens assistants, les préparateurs en pharmacie, les techniciens divers.

Les données sont extraites de la base de données OMS sur les statistiques relatives aux personnels de santé mondiale de l'OMS. Ces données sont compilées à partir de plusieurs sources comme les recensements nationaux de la population, les enquêtes sur l'emploi, ou à partir des systèmes de statistiques nationales et administratifs de routine de l'information. En conséquence, il existe une grande variation entre les pays dans la qualité, la couverture ou l'année de référence. Généralement, les données utilisées en guise de dénominateur pour la densité du personnel de santé (par exemple des estimations de la population nationale) ont été obtenues à partir de *Perspectives de la population mondiale* publiée par la Division de Population des Nations. Parfois, le rapport officiel ne fournit que les indicateurs de densité de main-d'œuvre, à partir desquelles le stock est estimé.

La classification des agents de santé est basée sur les critères de l'enseignement et les formations professionnelles, les réglementations des professions de la santé, les activités et tâches de l'emploi, à savoir un cadre de catégorisation des variables de la main-d'œuvre clé en fonction des caractéristiques communes. Le cadre de l'OMS repose en grande partie

sur les dernières révisions des systèmes de classification internationaux normalisés de l'Organisation internationale du Travail (Classification internationale type des professions), de l'Organisation des Nations unies pour l'éducation, la science et la culture (Classification internationale type de l'éducation), et de la Division de statistique des Nations Unies (Classification internationale type de toutes les branches d'activité économique). Malgré la nature spécifique de chaque pays et les différents moyens de mesure, les données sont disponibles pour un maximum de 9 catégories de personnels de la santé agrégées et jusqu'à 18 catégories non agrégées. Cette dernière reflète essentiellement les tentatives pour mieux distinguer certains sous-groupes de la population active en fonction des différences assumées dans le niveau des compétences et des spécialisations.

Tableau 12: Dépenses afférentes à la santé

Les Dépenses totales de santé est la somme de toutes les dépenses pour les soins de santé, la restauration ou l'amélioration payés en espèces ou fournis en nature. Il est la somme des dépenses publiques et des dépenses privées. Les dépenses de santé financées par les administrations publiques est la somme des dépenses de santé payées en espèces ou fournis en nature par des entités gouvernementales, comme le ministère de la Santé, d'autres ministères, organismes parapublics ou les caisses de sécurité sociale (sans double comptage des transferts gouvernementaux à la sécurité sociale et extra fonds budgétaires). Il comprend toutes les dépenses effectuées par ces entités, indépendamment de la source, et couvre donc tout financement des bailleurs de fonds. Il comprend les paiements de transfert aux ménages pour compenser les coûts des soins médicaux et des fonds extrabudgétaires pour financer les services de santé. Cela comprend également les dépenses courantes et en capital. Plus d'informations sur la définition, la méthodologie, les sources et les limites des données peut être trouvée sur la base de données sur les dépenses en santé mondiale (voir

<http://apps.who.int/nha/database/DocumentationCentre/Index/fr>)

Chapitre VI: Comptabilités nationales

La base de données les principaux agrégats des comptes nationaux (disponible à <http://unstats.un.org/unsd/snaama>) présente les données des comptes nationaux pour plus de 200 pays et régions du monde Elle est la base pour la publication des statistiques des comptes nationaux: Analyse des principaux agrégats, une publication préparée par la Division de statistique du Département des affaires économiques et sociales du Secrétariat des Nations Unies avec le généreux concours des bureaux nationaux de statistique. Cette base de données est mise à jour avec les données nouvellement disponibles des comptes nationaux de chaque pays et régions chaque décembre.

La base de données les principaux agrégats des comptes nationaux est établie sur les données extraites du questionnaire des Nations Unies comptes nationaux (NAQ) introduit en Octobre 1999, lui-même basé sur le Système de comptabilité nationale 1993 (SCN 1993). Les données sont ensuite complétées par des estimations établies par la Division de statistique de l'ONU. Finalisé en septembre 2009, la version actualisée du SCN est le Système de comptabilité nationale de 2008. En 2013, seuls l'Australie, le Canada, la Chine, Hong Kong (région administrative spéciale), l'Equateur, l'Israël, le Mexique, la Nigeria, la Pérou, le Timor-Leste, l'Ukraine et les Etats-Unis d'Amérique commencèrent à soumettre les données selon le SCN 2008. Les membres de l'Union européenne, l'Islande, le Kenya, la Liban, le Malawi, la Nouvelle-Zélande, la Norvège, le Pakistan, la République de Corée, la Serbie, l'Afrique du Sud, la Soudan du Sud, la Suisse, l'ex-R. Y. Macédoine et l'Ouganda ont, dans la mesure du possible, fourni des données selon le SCN 2008 pour les estimations de l'Analyse des principaux agrégats de 2013.

Tout est mis en œuvre afin que les estimations des différents pays et régions facilitent la comparabilité internationale de données. Dans cet objectif, les différences importantes dans les concepts, la portée, la couverture et la classification ont été décrites dans les notes de chaque pays. Ces différences doivent donc être prises en compte pour éviter les comparaisons trompeuses. Les données contenues dans les tableaux se rapportent à l'année civile pour laquelle ils sont présentés, les exceptions sont indiqués sur le site web de la base de données les principaux agrégats des comptes nationaux : (<http://unstats.un.org/unsd/snaama/notes.asp>). Les chiffres disponibles sont les révisions et estimations les plus récentes au moment de la compilation. En général, les chiffres pour l'année la plus récente doivent être considérés comme provisoires. Les sommes des composants dans les tableaux ne correspondent pas nécessairement aux totaux indiqués en raison des arrondis.

Tableau 13: Produit intérieur brut et produit intérieur brut par habitant

Ce tableau montre le produit intérieur brut (PIB) aux prix courants et constants de 2005 (en dollars américains), le PIB par habitant (en dollars américains), et les taux de croissance réels correspondant. Les tableaux sont destinés à faciliter les comparaisons internationales des revenus générés par la production. Les données ou les estimations du PIB total et du PIB par habitant aux prix courants ont été convertis en dollars américains, tandis que le PIB total aux prix constants sont convertis en prix de 2005 avant la conversion en dollars américains en utilisant les taux de change 2005. La méthode de conversion en dollars américains est décrite dans le document sur la méthodologie de la base de données principaux agrégats des comptes nationaux. (<http://unstats.un.org/unsd/snaama/methodology.pdf>). Pour les comparaisons entre pays, les taux de croissance sont préférés car comme ils sont basés sur des prix constants qui sont plus indicatifs des tendances du PIB total. Le taux de croissance (en pourcentage) est calculé comme la moyenne géométrique des taux de croissance annuels.

Tableau 14: Dépenses imputées au produit intérieur brut

Ce tableau fournit le PIB aux prix courants, puis le décompose en pourcentages des composantes économiques pour donner un aperçu de la structure du système économique. Il montre la proportion du revenu de la production des dépenses par les ménages ou le gouvernement sur la consommation finale, la part de l'investissement, et aussi la proportion du PIB exporté après les déductions des dépenses sur les importations. Dans certains cas, les variations de stocks doivent être interprétées prudemment, car les pays peuvent également inclure des éléments tels que les erreurs statistiques. Aussi, il est possible que le total n'atteigne pas 100 en raison de divergences statistiques.

Tableau 15: Valeur ajoutée brute par type d'activité économique

Ce tableau présente la part de la valeur ajoutée brute aux prix courants attribuable à chaque activité économique (en termes de CITI 3):

- Agriculture, chasse, sylviculture et pêche (CITI A-B)
- Activités extractives, activités de fabrication, production et distribution d'électricité, de gaz et d'eau (CITI C-E)
- Activités de fabrication (CITI D)
- Construction (CITI F)
- Commerce de gros et de détail, réparation de véhicules automobiles, de motocycles et de biens personnels et domestiques, hôtels et restaurants (CITI G-H)
- Transports, entreposage et communications (I)
- Et "autres activités", y compris intermédiation financière, immobilier, locations et activités de services aux entreprises, administration publique et défense, sécurité sociale obligatoire, éducation, santé et action sociale, autres activités de services collectifs, sociaux et personnels, et ménages privés employant du personnel domestique (CITI J-P).

Chapitre VII: Finances

Les informations détaillées et les chiffres courants concernant les tableaux 16 et 17 figurent dans les Statistiques financières internationales publiées par le Fonds monétaire international (voir aussi <http://elibrary-data.imf.org>) et dans le *Bulletin mensuel de statistique* des Nations Unies. Les informations détaillées et les chiffres courants concernant les tableaux 18 et 19 figurent dans la base de donnée la Banque mondiale, voir <http://data.worldbank.org/products/ids>

Tableau 16: Réserves internationales, l'or non compris

Le total des réserves, déduction faite de l'or, correspond à la somme de tous les éléments de change figurant dans ce tableau, ainsi qu'à la situation des réserves du fonds, et a la valeur en dollars des Etats-Unis des droits de tirage spéciaux détenus par les autorités monétaires. Les éléments de change comprennent les créances détenus par les autorités monétaires sur des non-résidents sous forme de billets de banque étrangères, de dépôts bancaires, de bons du Trésor, d'effets publics à court et à long terme et d'autre éléments utilisables si la situation de la balance des paiements l'exige.

Tableau 17: Taux d'intérêt à court terme

Ce tableau fournit des taux des bons du Trésor et les taux du marché monétaire. Les taux indiqués représentent taux à court terme du marché monétaire - le taux auquel les emprunts à court terme sont effectués entre les institutions financières, la rapidité d'émission du papier d'État à court terme ou négociés sur les marchés. Les noms standards de ces tarifs sont les taux du marché monétaire et les taux des bons du Trésor, respectivement. Les descriptions des séries nationales sont fournis dans les statistiques financières internationales du FMI, voir <http://elibrary-data.imf.org> pour plus d'informations.

Tableau 18: Stocks et flux de la dette extérieure, à long terme

Le Système de notification de la dette de la Banque mondiale sert à tenir à jour prêt par prêt les statistiques de la dette extérieure des pays en développement. Les pays en développement sont dans ce tableau ceux où le RNB par habitant était en 2013 inférieur à 12 745 de dollars É.-U. La dette à long terme comporte trois éléments (a) la dette publique, (b) la dette garantie par une administration publique et (c) la dette extérieure privée non garantie et les données sont en outre ventilées par type de créancier. Les définitions et la composition du tableau sont les suivantes:

| | | |
|---|--|--|
| La dette extérieure à long terme | | La dette due à des non-résidents dont l'échéance initiale ou prolongée d'une durée supérieure a un an et qui est et remboursable en devises étrangères, en biens ou en services. |
| (a) la dette publique et (b) la dette garantie par l'Etat | | (a) une obligation externe d'un débiteur public, y compris le gouvernement, une subdivision politique, ou un organisme et administrations publiques autonomes. (b) Une obligation externe d'un débiteur privé dont le remboursement est garanti par une entité publique. |
| Créanciers publics | | |
| Multilatéraux | | Les prêts obtenus auprès d'organisations internationales (prêts multilatéraux), à l'exclusion des prêts au titre de fonds administrés par une organisation internationale pour le compte d'un gouvernement donateur précis, qui sont classés comme prêts consentis par des gouvernements |
| BIRD | | La Banque internationale de reconstruction et de développement |
| IDA | | L'Association internationale de développement |
| Bilatéraux | | Les prêts consentis par des gouvernements (prêts bilatéraux) et par des organisations publiques autonomes |
| Créanciers privés | | |
| Obligations | | émissions publiques d'obligations placées auprès d'investisseurs privés |
| Banques commerciales | | Prêts consentis par des banques privées et autres institutions financières privées |
| Autres institutions privées | | Engagements vis-à-vis de l'extérieur au titre des biens nationalisés et dettes diverses à l'égard de créanciers privés et inclus crédits consentis par des fabricants exportateurs et autres fournisseurs de biens |
| (c) la dette privée non garantie | | Une obligation extérieure d'un débiteur privé dont le remboursement n'est pas garantie par une entité publique. La dette publique et garantie par l'Etat à long terme sont agrégées. |

Une distinction est faite entre les catégories suivantes de dette publique extérieure:

| | |
|------------------------------|--|
| Dette (montants non versés) | Dette totale publique et garantie publique par l'Etat non utilisée en fin d'année; les données pour la dette privée non garantie ne sont pas disponibles |
| Engagements | Montant total des prêts à long terme pour lesquels des contrats ont été signés dans l'année indiquée; données pour la dette privée non garantie ne sont pas disponibles. |
| Versements | Les sommes tirées sur l'encours des prêts pendant l'année considérée |
| Remboursements du principal | Les remboursements effectifs du principal en devises, biens ou services pendant l'année considérée;; |
| Apports nets | (ou prêts nets) sont les décaissements moins les remboursements de principal |
| Paiements d'intérêts | Les paiements d'intérêts effectués en devises, biens ou services pendant l'année considérée |
| Transferts nets | Les flux nets moins les paiements d'intérêts, ou les décaissements moins le total des paiements au titre du service de la dette. |
| Total du service de la dette | Somme du remboursement du principal et des paiements d'intérêt effectivement faits dans l'année spécifiée. |

Le total estimatif de la dette extérieure des pays en développement a été calculé en combinant les données du Système de notification avec d'autres informations obtenues auprès des créanciers par le biais des systèmes de collecte de données d'autres organismes, tels que la Banque des règlements internationaux (BRI) et l'Organisation de coopération et développement économiques, ou de sources du marché, et avec des estimations des économistes chargés des pays à la Banque mondiale et au Fonds monétaire international (FMI).

Toutes les données concernant la dette publique et la dette garantie par une entité publique proviennent des débiteurs, sauf celles concernant les prêts consentis par certains organismes multilatéraux, pour lesquels les données proviennent des dossiers des créanciers : il s'agit notamment de la Banque africaine de développement, de la Banque asiatique de développement, de la Banque centrale d'intégration économique, de la Banque interaméricaine de développement, de la Banque internationale de reconstruction et de développement (BIRD) et de l'Association internationale de développement (IDA) (la BIRD et l'IDA font partie du groupe de la Banque mondiale).

Les statistiques relatives à la dette publique ou à la dette garantie par l'Etat ne comprennent pas les données concernant: (a) les transactions avec le Fonds monétaire international; (b) la dette remboursable en monnaie nationale; (c) les investissements directs; et (d) la dette à court terme (c'est-à-dire la dette dont l'échéance initiale est inférieure à un an). Les statistiques relatives à la dette privée non garantie ne comprennent pas non plus les éléments précités, mais comprennent les obligations contractuelles au titre des prêts consentis par des sociétés mères étrangères ou leurs filiales à des entreprises créées dans le cadre d'investissements directs.

Tableau 19: Stocks de la dette extérieure, garantie par l'Etat (à long terme)

Les pays figurant sur ce tableau sont ceux pour lesquels les données sont suffisamment fiables pour permettre une présentation significative de l'encours de la dette et des paiements futurs au titre du service de la dette. Les mêmes définitions et sources que le tableau 58 s'appliquent.

Chapitre IX: Marché du travail

Une collection complète et mise à jour tous les 2 ans des données sur la main-d'œuvre et des sujets connexes sont disponibles à partir d'*indicateurs clés du marché du travail (ICMT)*, de l'Organisation internationale du Travail (OIT). Accessible à www.ilo.org/ilostat, l'entrepôt de données d'ILOSTAT publie annuellement, trimestriellement et mensuellement les données reçues des pays. Ces données ne comprennent donc pas tous les contrôles de cohérence, ni toutes les sources utilisées par ICMT. Pour diverses raisons, les définitions nationales de l'emploi et du chômage diffèrent souvent des définitions internationales types recommandées, limitant ainsi les possibilités de comparaison entre pays. Ces comparaisons se trouvent en outre compliquées par la diversité des systèmes de collecte de données

utilisés pour recueillir des informations sur les personnes employées et les chômeurs. Le site ILOSTAT donne une description plus complète de la méthodologie employée pour établir les séries sur la main-d'œuvre.

Tableau 20: Chômage

Les chiffres sont présentés en valeur absolue et en pourcentage. Les données sont normalement des moyennes annuelles des données mensuelles, trimestrielles ou semestrielles. Par "chômeurs", on entend les personnes dépassant un âge déterminé qui, pendant une période donnée, étaient:

- (a) "sans emploi", c'est-à-dire sans emploi rémunéré ou indépendant;
- (b) "disponibles", c'est-à-dire qui pouvaient être engagées pour un emploi rémunéré ou pouvaient s'adonner à un emploi indépendant au cours de la période de référence; et
- (c) "à la recherche d'un emploi", c'est-à-dire qui avaient pris des mesures précises à un certain moment pour trouver un emploi rémunéré ou un emploi indépendant.

Ne sont pas considérés comme chômeurs:

- (a) Les personnes qui, pendant la période de référence, avaient l'intention de créer leur propre entreprise ou exploitation agricole, mais n'avaient pas encore pris les dispositions nécessaires à cet effet et qui n'étaient pas à la recherche d'un emploi en vue d'une rémunération ou d'un profit;
- (b) Les anciens travailleurs familiaux non rémunérés qui n'avaient pas d'emploi et n'étaient pas à la recherche d'un emploi en vue d'une rémunération ou d'un profit.

Les séries représentent généralement le nombre total des chômeurs complets ou des personnes temporairement mises à pied. Les données en pourcentage, lorsqu'elles figurent dans le tableau, sont calculées en comparant le nombre de chômeurs au nombre total des personnes du groupe de main-d'œuvre sur lequel sont basées les données relatives au chômage.

Tableau 21: Emploi par activité économique

Tableau de l'emploi présente des chiffres absolus sur la répartition des salaires par activité économique, selon la CITI, Rev. 3. La colonne de l'emploi total comprend les activités économiques incorrectement définies qui ne sont pas comptabilisées dans les autres catégories. Les données sont organisées, autant que possible, selon la Classification internationale type, par industrie, de toutes les branches d'activité économique.

Chapitre IX: Indices des prix et de la production

Tableau 22: Indices des prix à la consommation

Un indice est généralement estimé à partir d'une suite de mesures synthétiques des variations relatives, d'une période à l'autre, des prix d'un ensemble fixe de biens et de services de consommation constants en quantité et par leurs caractéristiques, acquis, utilisés ou payés par la population de référence. Chaque mesure synthétique est obtenue comme une moyenne pondérée d'un grand nombre d'indices de prix d'agrégats élémentaires. L'indice de chaque agrégat élémentaire est estimé au moyen d'un échantillon de prix pour un ensemble fixe de biens et de services que se procurent les individus de la population de référence dans une région donnée, ou qui habitent cette région, auprès d'un ensemble spécifié de points de vente ou auprès d'autres fournisseurs de biens et de services de consommation. Le tableau présente les indices généraux des prix à la consommation pour tous les groupes d'articles de consommation combinés, et un indice "Alimentation", y compris les boissons non alcoolisées seulement. Dans le cas où les boissons alcoolisées et/ou le tabac sont compris dans le groupe "alimentation", l'utilisateur sera informé par un appel de note.

Tableau 23: Indices des prix à la production

Les prix à la production sont les prix auxquels les producteurs vendent leur production sur le marché intérieur. Indices de prix de production couvrent normalement les prix des produits caractéristiques de l'agriculture, de la sylviculture et la pêche, des mines et carrières, de la fabrication, de l'électricité, et du gaz et d'eau. Les prix sont normalement mesurés en termes de prix de transaction, y compris les impôts indirects non déductibles moins les subventions pour les produits d'origine nationale et pour les marchandises importées, les droits d'importation et autres impôts indirects non déductibles moins les subventions. La formule de l'indice de Lapeyre est généralement utilisée.

Les indices de prix pour chaque pays sont arrangés selon le schéma suivant:

| (a) | Eléments de l'offre | (b) | Stade de la transformation |
|-----|---|-----|----------------------------|
| | Offre intérieure | | Matières premières |
| | Production nationale pour le marché intérieur | | Produits intermédiaires |
| | Produits agricoles | (c) | Utilisation finale |
| | Produits industriels | | Biens de consommation |
| | Produits importés | | Biens d'équipement |

La source pour ce tableau est le *Bulletin mensuel des statistiques* des Nations Unies, voir <http://unstats.un.org/unsd/mbs> pour plus d'informations. Les données sont principalement obtenues du questionnaire de pays liés à cette publication et, si nécessaire rebasé à une période de base uniforme, qui est actuellement 2005 = 100. Cette opération n'entraîne pas de changement dans les systèmes de pondération utilisés par les pays. Pour un complément de détails sur l'indice des prix à la production, on se reportera au *Producer Price Index Manual, Theory and Practice* publié par le Fonds monétaire international en 2004.

Tableau 24: Indices de la production agricole

“L’agriculture” se rapporte à la production de tous les produits de l’agriculture et de l’élevage. “L’indice des produits alimentaires” comprend les produits considérés comme comestibles et qui contiennent des éléments nutritifs. Les indices de la production agricole et de la production alimentaire sont calculés selon la formule de Lapeyre avec les années 2004-2006 pour période de base. Le choix d’une période de plusieurs années permet de diminuer l’incidence des fluctuations annuelles de la production agricole pendant les années de base sur les indices pour cette période. Les quantités produites de chaque denrée sont pondérées par les prix nationaux moyens à la production de 2004-2006, et additionnées pour chaque année. Les indices sont fondés sur les données de production d’une année civile. Ils peuvent différer dans certains cas des indices effectivement établis et publiés par les pays eux-mêmes par suite de différences dans les concepts, la couverture, les pondérations et les méthodes de calcul. On s’est efforcé d’estimer ces différences méthodologiques afin de rendre les données plus facilement comparables à l’échelle internationale. Des chiffres détaillés de production sont publiés dans l’*Annuaire statistique* de la FAO.

Tableau 25: Indices de la production industrielle

La Division de statistique de l’ONU recueille, compile et publie des indices mensuels, trimestriels et annuels de la production industrielle basé sur un questionnaire adressé aux bureaux nationaux de statistique. Les indices sont calculés selon la Classification internationale type par industrie de toutes les activités économiques (CITI), catégories Rev.4. Les deux chiffres, pour les sections BE de la classification, "fabrication" i.e. "Industries extractives", "Électricité, gaz, vapeur et air conditionné" et "distribution d'eau; assainissement, gestion des déchets et dépollution". Pour les pays qui continuent à utiliser la CITI Rev.3, ces données sont toujours collectées et publiées. La collecte de ces indices a été lancée en 1953 et est actuellement diffusé à travers les publications des Nations Unies suivants: le *Bulletin mensuel de statistiques*, l’*Annuaire statistique*, et de la *World Statistics Pocket Book*.

Les pondérations utilisées dans le calcul des indices pour un pays particulier représentent la valeur ajoutée brute aux prix de base des industries qui contribuent. Directives méthodologiques pour ces indices sont disponibles dans les recommandations internationales pour l’Indice de la Production Industrielle 2010. Les indices de l’Annuaire sont actuellement publiés avec 2005 comme année de base.

Chapitre X: Agriculture, forêts et pêche

Les séries présentées sur l’agriculture et la pêche ont été fournies par l’Organisation des Nations Unies pour l’alimentation et l’agriculture (FAO) et portent principalement sur les tendances à long terme de la croissance de la production agricole et des approvisionnements alimentaires, et sur la production des principales denrées agricoles et la production halieutique.

La production agricole se définit comme comprenant l’ensemble des produits agricoles et des produits de l’élevage à l’exception de ceux utilisés comme semences et comme aliments pour les animaux, et pour les autres utilisations intermédiaires en agriculture; par exemple, on déduit les œufs utilisés pour la reproduction. L’apport intermédiaire de semences et d’aliments pour les animaux et d’autres éléments similaires se rapportent à la fois à des produits locaux et

importés. Pour tous détails complémentaires, on se reportera à l'annuaire statistique de la FAO. Des statistiques peuvent également être consultées sur le site Web de la FAO <http://faostat3.fao.org>.

Tableau 26: Céréales

Les données sur la production de céréales se rapportent uniquement aux céréales récoltées pour le grain sec; celles cultivées pour le foin, le fourrage vert ou le pâturage en sont exclues.

Tableau 27: Viande et halieutique

Les données se réfèrent viande provenant des animaux abattus à l'intérieur des frontières nationales, quelle que soient leurs origines. Les chiffres de production de viande bovine, de buffle, de poulet, de porc (y compris le bacon et le jambon), de mouton et de chèvre se rapportent à la production en poids de carcasses et ne comprennent pas le saindoux, le suif et les abats comestibles. Toutes les données se rapportent à la production totale de viande, c'est-à-dire à la fois aux animaux abattus à des fins commerciales et les animaux abattus à la ferme.

Les données ont trait (i) à la pêche maritime et intérieure et (ii) à l'aquaculture, et sont exprimées en poids vif. Elles comprennent poissons, crustacés et mollusques, mais excluent éponges, coraux, perles, algues, crocodiles et les mammifères aquatiques (baleines, dauphins, etc.). Le pavillon du navire est considéré comme la principale indication de la nationalité de la prise. Les données de pêche maritime comprennent les quantités débarquées par des bateaux nationaux dans des ports étrangers et excluent les quantités débarquées par des bateaux étrangers dans des ports nationaux. Pour séparer la production d'aquaculture de la pêche de capture, au moins deux critères doivent se vérifier, c'est-à-dire l'intervention humaine dans une ou plusieurs des phases du cycle de croissance, et l'appartenance de l'organisme élevé et récolté à une personne physique, à une personne morale ou à l'état. Les données sont publiées dans *l'Annuaire statistique de la pêche*.

Tableau 28: Bois rond

Les données sur le bois rond se réfèrent au bois brut, bois à l'état naturel, tel qu'il a été abattu ou récolté autrement, avec ou sans écorce, fendu, grossièrement équarri ou sous une autre forme (par exemple, racines, souches, loupes, etc.). Il peut être également imprégné (par exemple, dans le cas des poteaux télégraphiques) et dégrossi ou taillé en pointe. Cette catégorie comprend tous les bois provenant des quantités enlevées en forêt ou provenant des arbres poussant hors forêt, y compris le volume récupéré sur les déchets naturels et les déchets d'abattage et de transport pendant la période envisagée (année civile ou forestière).

Chapitre XI: Industries manufacturières

La base de données des statistiques industrielles par produit relatives à la production (disponible à <http://unstats.un.org/unsd/industry>) contient des données sur la production de produits industriels 200 pays et régions pour environ 600 produits. C'est la base pour la publication de *l'Annuaire des statistiques industrielles par produit Volume I and II*, une publication préparée par la Division de statistique du Département des affaires économiques et sociales du Secrétariat des Nations Unies avec le généreux concours des bureaux nationaux de statistique. Une série historique des données sur les produits sont disponibles à partir de 1950 ; à partir de 1995, une série basée sur le classement actuel des matières premières est disponible dans la base de données disponible en ligne.

La base de données des statistiques industrielles par produit relatives à la production est basée sur les données obtenues à partir du questionnaire des Nations Unies sur les produits industriels, les statistiques de production basées sur les définitions des produits de la Classification centrale de produits (CPC) Version 1.1 et le système harmonisé de désignation et de codification des marchandises de 2002. Les données couvrent les produits provenant de l'exploitation minière, de la production d'électricité, de gaz, classées dans les sections B, C et D de la Classification internationale type par industrie de toutes les activités économiques (CITI) Révision 4, issues de la production primaire ou secondaire. Les données des questionnaires des pays sont complétées par d'autres informations provenant de publications d'institutions spécialisées et d'organismes intergouvernementaux.

Les données rapportées pour les produits reflètent la valeur et le volume de la production vendue au cours de la période de l'enquête, qui est définie comme la production réalisée à un moment donné, vendue (facturée) au cours de la période de référence. Un certain nombre de pays ont pu fournir que des données fondées sur la "liste Prodcom", utilisés par la Communauté européenne pour les statistiques sur les produits industriels, plutôt que les codes à base de PCC utilisés dans cette publication. Dès que possible, les données sur la base Prodcom ont été converties pour les agrégations nécessaires à cette publication. Bien que les informations fussent recueillies auprès des pays dans les monnaies nationales, les données ont été converties en dollars américains pour faciliter la comparaison entre les pays. La classification PCC et sa correspondance à d'autres classifications, ainsi que la méthodologie pour la conversion en

dollars américains sont décrites dans la dernière édition dans l'*Annuaire des statistiques industrielles par produit (Volume I and II)*.

Tableau 29: Sucre brut (CPC code: 23510-0) se rapporte aux sucres bruts de canne ou de betterave sans addition d'aromatisants ou de colorants.

Tableau 30: Bière (24310-0) se rapportent à la bière produite à partir du malte

Tableau 31: Ciment (37440-0) se rapporte aux ciments Portland, ciments alumineux, ciment de laitier et ciments hydrauliques similaires, autres que sous forme de "clinkers".

Tableau 32: Coton et laine tissés (26500-1 & 26600-0) se rapporte à deux commodités; i.) aux tissages de laine cardée ou peignée, ou de poils fins cardés ou peignés, destinés à l'habillement, aux textiles d'ameublement, au linge de maison ou à des usages techniques ou industriels; ii.) aux tissus de coton, contenant au moins 85 pour cent en poids de coton, écrus, blanchis, teints, en fils de diverses couleurs et imprimés; tissus de coton, contenant moins de 85 pour cent en poids de coton, mélangés principalement ou uniquement avec des fibres synthétiques ou artificielles, écrus, blanchis, teints, en fils de diverses couleurs et imprimés et autres tissus de coton.

Tableau 33: Fonte et acier brut (41111-0 & 41120-0) se rapporte à deux commodités; i.) aux fontes brutes non alliées, fontes brutes alliées et fontes spiegel, en gueuses, saumons ou autres formes primaires; ii.) aux lingots, autres formes primaires, et demi produits en fer, en aciers non alliés, aciers inoxydables ou autres aciers alliés.

Chapitre XII: Commerce international des marchandises

Préparée par la Division de statistique du Département des affaires économiques et sociales du Secrétariat des Nations Unies, l'*Annuaire statistique du commerce international (ASCI)* donne un aperçu des dernières tendances du commerce des biens et services de la plupart des pays et régions dans le monde. L'annuaire, voir <http://comtrade.un.org/pb/>, est publié en deux volumes; Volume I est compilé plus tôt dans l'année pour présenter un aperçu de pointe du commerce international de marchandises à l'année précédente, Volume II, généralement publié six mois plus tard, contient des tableaux détaillés indiquant le commerce international pour des produits individuels et 11 tableaux du commerce mondial couvrant les valeurs commerciales et les indices. Volume II contient également la mise à jour des tableaux du commerce mondial, comme le tableau 34 de cet annuaire. Les tableaux de cet annuaire sont également mis à jour mensuellement (tableau 34) ou trimestriellement (tableau 35) dans le *Bulletin mensuel de statistique* des Nations Unies et sur le site des statistiques du commerce, voir <http://unstats.un.org/unsd/trade/data/tableaux.asp#annual>.

Les statistiques présentées dans cet Annuaire ont été compilées en majorité par les autorités statistiques nationales avec les Nations Unies d'après *les concepts et les définitions des Statistiques du commerce international de marchandises de 2010* (SCIM 2010). Selon les parties du territoire économique incluses dans le territoire statistique, le système du commerce de compilation de données adoptée par un pays (son système de commerce) peut être appelé générale ou spéciale.

| | |
|--------------------------------|--|
| Le système du commerce général | Le territoire statistique coïncide avec le territoire économique. Par conséquent, dans le cadre du système général, les importations comprennent tous les biens admis sur le territoire économique du pays déclarant et les exportations comprennent tous les biens qui le quittent. Dans ce cas, les importations comprennent les marchandises entrant dans la zone de libre circulation, les locaux de perfectionnement actif, zones franches industrielles, des entrepôts de douane ou les zones franches commerciales et les exportations comprennent les marchandises quittant les éléments territoriaux |
| Le système du commerce spécial | (Définition stricte) Le territoire statistique ne comprend qu'une partie particulière du territoire économique, de sorte que certains flux de marchandises qui sont dans le champ d'application de l'IMTS 2010 ne sont pas inclus soit dans les statistiques d'importation ou d'exportation du pays déclarant. La définition stricte du système du commerce spécial est utilisé lorsque le territoire statistique ne comprend que la zone de libre circulation, c'est à dire la partie dans lequel les marchandises "peuvent être écoulées sans restriction douanière". Par conséquent, dans un tel cas, les importations ne comprennent que les marchandises entrant dans la zone de libre circulation d'un pays déclarant et les exportations comprennent seulement les marchandises qui quittent la zone de libre circulation du pays déclarant |
| | (Définition assouplie) (a) les marchandises qui entrent dans un pays pour, ou à laisser, après, le perfectionnement actif, ainsi que (b) les marchandises qui entrent ou quittent une zone franche |

| | |
|--|--|
| | industrielle, sont également enregistrés et inclus dans les statistiques du commerce international de marchandises |
|--|--|

En général, tous les pays rapportent leurs données du commerce de marchandises détaillée selon la description des produits Système harmonisé (SH) de codification et les données correspondent et sont ensuite présentés par Standard commerce international classifications (CTCI, Rev.3). Les données se rapportent aux années civiles; Toutefois, pour les pays qui déclarent selon une autre année de référence, les données sont présentées dans l'année qui couvre la majorité de l'année de référence utilisée par le pays.

Les valeurs de type FOB comprennent la valeur transactionnelle des marchandises et la valeur des services rendus à livrer des marchandises à la frontière du pays exportateur. Les valeurs de type CIF comprennent la valeur transactionnelle des marchandises, la valeur des services effectués pour livrer des marchandises à la frontière du pays exportateur et la valeur des services rendus à livrer les marchandises de la frontière du pays exportateur jusqu'à la frontière de la pays importateur. Par conséquent, les données pour la valeur statistique des marchandises importées sont présentés comme une valeur CIF-type et la valeur statistique des marchandises exportées comme une valeur de type FOB.

Conversion des valeurs de monnaies nationales en dollars des États-Unis se fait au moyen de facteurs de conversion de devises en fonction des taux de change officiels. Les valeurs en devises soumises à des fluctuations sont converties en dollars des États-Unis en utilisant les taux de change moyens pondérés calculés spécialement à cet effet. Le taux de change moyen pondéré pour une monnaie donnée pour une année donnée est les facteurs mensuels composants, fournis par le Fonds monétaire international dans sa publication Statistiques financières internationales, pondérée par la valeur du commerce pertinents de chaque mois; un facteur mensuel est le taux de change (ou la moyenne simple) en vigueur au cours de ce mois. Ces facteurs sont appliqués aux importations et exportations totales et au commerce des produits individuels avec des pays individuels

Tableau 34: Importations, exportations totales et balance commerciale

Les données sur les importations et exportations totales des pays (ou régions) présentées dans ce tableau proviennent principalement *International Financial Statistics* publié mensuellement par le Fonds monétaire international (FMI), mais aussi d'autres sources telles que les publications et les sites web nationaux, les questionnaires de *Bulletin mensuel des statistiques* des Nations Unies, et l'Annuaire statistique du commerce international pour plus de détails. Les estimations des données manquantes sont faites pour arriver aux totaux régionaux, mais ne sont pas représentés ailleurs. Le procédé d'estimation est automatisé en utilisant les taux de croissance trimestriels année-sur-année pour l'extrapolation des données trimestrielles manquantes (sauf quand les données trimestrielles peuvent être estimées à partir des données mensuelles disponibles de ce trimestre). Les facteurs de conversion appliqués aux données dans ce tableau sont publiés trimestriellement dans le *Bulletin mensuel de statistique* des Nations Unies et sont également disponibles sur le site Web des statistiques du commerce ONU:

<http://unstats.un.org/unsd/trade/data/tableaux.asp#annual>.

Tableau 35: Importations et exportations totales, indices de valeur et de volume

Les indices du volume et les indices de la valeur unitaire/prix sont comme compilées par les pays. Ils indiquent les variations des quantités (indice du volume) et des prix moyens (indice de la valeur unitaire/prix) des importations ou exportations totales. Utilisant ces indices la Division de Statistique des Nations Unies calcule les indices des termes de l'échange (sont obtenus en divisant les indices de la valeur unitaire à l'exportation par ceux à l'importation), et l'indice du pouvoir d'achat des exportations (sont obtenu en multipliant l'indice des termes de l'échange du volume des exportations). Les données sont obtenues à partir de sources similaires au tableau 34. Les données manquantes nécessaires pour le calcul des totaux régionaux sont estimées en utilisant une variété de méthodes et de sources supplémentaires. Toutes les estimations sont revues et ajustées si nécessaire.

Chapitre XIII: Energie

L'*Annuaire statistique de l'énergie* (disponible à <http://unstats.un.org/unsd/energy/yearbook>) est une collection complète de statistiques internationales de l'énergie depuis plus de 220 pays et régions. L'annuaire est préparé par la Division de statistique du Département des affaires économiques et sociales du Secrétariat de l'ONU. L'annuaire est produit chaque année avec les nouvelles données disponibles sur la production d'énergie, le commerce, les variations de stocks, bunkers et de la consommation pour tous les pays et régions, et une série historique de 1950 sont disponibles. Les données, essentiellement rassemblées à partir du questionnaire annuel de l'énergie envoyé par la Division de statistique de l'ONU, sont complétées à l'aide des publications officielles des organismes nationaux de statistique ainsi que des publications des organisations internationales et régionales. Lorsque les données officielles ne sont pas

disponibles ou ne sont pas cohérentes, la Division de statistique établit des estimations en s'appuyant sur la documentation d'origine gouvernementale, professionnelle ou commerciale.

Les données se rapportent à l'année civile, sauf celles des pays suivants qui se rapportent à l'exercice budgétaire: Afghanistan et Iran (Rép. islamique) - commençant le 21 mars de l'année indiquée; L'Australie, le Bangladesh, le Bhoutan, l'Égypte (pour ces derniers deux pays, l'électricité seulement), le Népal - finissant en juin de l'année indiquée; Pakistan - à partir de Juillet de l'année indiquée L'Inde, le Myanmar et la Nouvelle-Zélande commençant en avril de l'année indiquée.

Tableau 36: Principaux biens de l'énergie

Les données sur la production se rapportent au premier stade de production; il s'agit donc: pour la houille, des quantités extraites des mines; pour les agglomérés, de la production des usines d'agglomération; pour le pétrole brut et le gaz naturel, de la production des puits de pétrole et de gaz; pour les liquides de gaz naturel, de la production des puits et des usines de traitement; pour les produits pétroliers raffinés, de la production brute des raffineries; pour le coke et le gaz de cokerie, de la production des fours; pour les autres gaz manufacturés, de la quantité produite par les usines à gaz, les hauts fourneaux ou les raffineries; et pour l'électricité, de la production brute des centrales génératrices. Les définitions des produits énergétiques présentés dans le tableau sont fournies dans l'Annuaire statistique de l'énergie (voir <http://unstats.un.org/unsd/energy/yearbook>)

Chapitre XIV: Environnement

Tableau 37: Terres

Les données relatives aux terres sont compilées par l'Organisation des Nations Unies pour l'alimentation et l'agriculture (FAO). Les définitions de la FAO en ce qui concerne les terres sont les suivantes:

| | |
|------------------------------|---|
| Superficie totale des terres | Superficie totale, à l'exception des eaux intérieures. Les eaux intérieures désignent généralement les principaux fleuves et lacs. |
| Terres arables | Terres affectées aux cultures temporaires (les terres sur lesquelles est pratiquée la double culture ne sont comptabilisées qu'une fois); prairies temporaires à faucher ou à pâturer, jardins maraîchers ou potagers et terres en jachère temporaire (moins de cinq ans). Cette définition ne comprend pas les terres abandonnées du fait de la culture itinérante. Les données relatives aux terres arables ne peuvent être utilisées pour calculer la superficie des terres aptes à l'agriculture. |
| Cultures permanentes | Superficie des terres avec des cultures qui occupent la terre pour de longues périodes et qui ne nécessitent pas d'être replantées après chaque récolte, comme le cacao, le café et le caoutchouc. Cette catégorie comprend les terres plantées d'arbustes à fleurs, d'arbres fruitiers, d'arbres à noix et de vignes, mais ne comprend pas les terres plantées d'arbres destinés à la coupe. |
| Superficie forestière | Dans l'Évaluation des ressources forestières mondiales 2010, la FAO a défini les forêts comme suit : Terres occupant une superficie de plus de 0,5 hectares avec des arbres atteignant une hauteur supérieure à cinq mètres et un couvert arboré de plus de dix pour cent, ou avec des arbres capables d'atteindre ces seuils en situ. Sont exclues les terres à vocation agricole ou urbaine prédominante. |

Tableau 38: Espèces menacées

Les données relatives aux espèces menaces pour chaque groupe d'animaux et de plantes, réunies par la Commission de la sauvegarde des espèces de l'Union mondiale pour la nature (UICN), sont publiées dans la Liste rouge des espèces menaces de l'UICN. Cette liste répertorie les espèces animales considérées comme menacées à l'échelle mondiale, réparties entre les catégories ci-après: éteintes, éteintes à l'état sauvage, gravement menacées d'extinction, menacées d'extinction, vulnérables, quasi menacées, et catégorie à données insuffisantes.

Tableau 39: Estimation des émissions de CO₂

Les données sur les émissions de dioxyde de carbone (CO₂) proviennent du "Carbon Dioxide Information Analysis Center" (CDIAC) du "Oak Ridge National Laboratory" (États-Unis), voir <http://cdiac.ornl.gov/>. Les estimations du "Carbon Dioxide Information Analysis Center" sont obtenues essentiellement à partir de statistique de la consommation d'énergie des Nations Unies des combustibles liquides et solides, a consommation de combustibles solides, liquides

et gazeux et sur le brûlage à la torche des gaz, et des chiffres de production de ciment du Bureau of the Ministry of the Interior des États-Unis. Les émissions sont indiquées en milliers de tonnes de dioxyde de carbone (à diviser par 3.667 pour avoir les chiffres de carbone). Les méthodes utilisées pour calculer les émissions sont décrites en détail dans "Global, Regional, and National Annual CO₂ Emissions Estimates from Fossil Fuel Burning, Hydraulic Cement Production, and Gas Flaring" et sur le site Web du Carbon Dioxide Information Analysis Center. Par rapport à d'autres sources industrielles pour lesquelles on calcule les émissions de CO₂, les statistiques sur la production de gaz de torche sont rares et sporadiques. Dans les pays où cette production représente une proportion considérable de l'ensemble des émissions de dioxyde de carbone, on peut voir apparaître de ce fait des chiffres parasites ou trompeurs pour ce qui est des tendances des émissions nationales de dioxyde de carbone durant la période visée par le tableau.

Tableau 40: Accès à l'eau et à l'assainissement

La proportion de la population ayant accès de façon durable à une source d'eau améliorée (zones urbaines et rurales) est le pourcentage de la population qui utilise l'un quelconque des types suivants d'approvisionnement en eau de boisson : eau courante, fontaine publique, forage ou pompe, puits protégé, source protégée ou eau de pluie. Les sources d'eau améliorées ne comprennent pas l'eau fournie par un vendeur, l'eau en bouteille, l'eau fournie par un camion-citerne ou les puits et sources non protégés. La proportion de la population ayant accès à un système d'assainissement amélioré (zones urbaines et rurales) se réfère au pourcentage de la population ayant accès aux installations qui dans des conditions hygiéniques empêchent l'homme, l'animal ou l'insecte d'entrer en contact avec des excréta humains. Les dispositifs tels que les égouts ou les fosses septiques, les latrines à siphon hydraulique et les latrines simples ou les latrines améliorées à fosse ventilée sont considérés comme appropriés, à condition de ne pas être publics. Pour être efficaces, ces installations doivent être bien construites et correctement entretenues. Les données sont estimées par le Programme commun OMS / UNICEF de surveillance de l'eau et de l'assainissement (JMP) à partir des sources nationales disponibles, se référer à www.wssinfo.org pour de plus amples informations.

Chapitre XV: Science et technologie

La recherche et le développement expérimental (R-D) englobe tous les travaux de création entrepris de façon systématique en vue d'accroître la somme des connaissances, y compris la connaissance de l'homme, de la culture et de la société, ainsi que l'utilisation de cette somme de connaissances pour de nouvelles applications. Pour tout renseignement complémentaire, voir le site Web de l'Institut de statistique de l'UNESCO www.uis.unesco.org.

Tableau 41: Dépenses intérieures brutes de recherche et développement

Les données présentées sur les dépenses intérieures brutes de recherche et développement sont compilées par l'Institut de statistique de l'UNESCO. Les données de certains pays ont été fournies à l'UNESCO par l'OCDE, EUROSTAT et "la Red de Indicadores de Ciencia y Tecnología (RICYT)". La dépense intérieure brute de R-D (DIRD) est la dépense totale intra-muros afférente aux travaux de R-D exécutés sur le territoire national pendant une période donnée. Elle comprend la R-D exécutée sur le territoire national et financée par l'étranger mais ne tient pas compte des paiements effectués à l'étranger pour des travaux de R-D. Les sources de financement pour la DIRD sont classées selon les cinq catégories suivantes:

| | |
|---------------------------|--|
| Les fonds des entreprises | Les fonds alloués à la R-D par toutes les firmes, organismes et institutions dont l'activité première est la production marchande de biens ou de services (autres que dans le secteur d'enseignement supérieur) en vue de leur vente au public, à un prix qui correspond à la réalité économique, et les institutions privées sans but lucratif principalement au service de ces entreprises, organismes et institutions. |
| Les fonds de l'Etat | Les fonds fournis à la R-D par le gouvernement central (fédéral), d'état ou par les autorités locales. Ceci inclut tous les ministères, bureaux et autres organismes qui fournissent, sans normalement les vendre, des services collectifs autres que d'enseignement supérieur, qu'il n'est pas possible d'assurer de façon pratique et économique par d'autres moyens et qui, de surcroît, administrent les affaires publiques et appliquent la politique économique et sociale de la collectivité. Les fonds des entreprises publiques sont compris dans ceux du secteur des entreprises. Les fonds de l'Etat incluent également les institutions privées sans but lucratif contrôlées et principalement financées par l'Etat. |

| | |
|--|--|
| Les fonds de l'enseignement supérieur | Les fonds fournis à la R-D par les établissements d'enseignement supérieur tels que toutes les universités, grandes écoles, instituts de technologie et autres établissements postsecondaires, ainsi que tous les instituts de recherche, les stations d'essais et les cliniques qui travaillent sous le contrôle direct des établissements d'enseignement supérieur ou qui sont administrés par ces derniers ou leur sont associés |
| Les fonds d'institutions privées sans but lucratif | Les fonds destinés à la R-D par les institutions privées sans but lucratif non marchandes au service du public, ainsi que par les simples particuliers ou les ménages. |
| Les fonds étrangers | Les fonds destinés à la R-D par les institutions et les individus se trouvant en dehors des frontières politiques d'un pays, à l'exception des véhicules, navires, avions et satellites utilisés par des institutions nationales, ainsi que des terrains d'essai acquis par ces institutions, et par toutes les organisations internationales (à l'exception des entreprises), y compris leurs installations et leurs activités à l'intérieur des frontières d'un pays |

Il faut éviter de comparer les chiffres absolus concernant les dépenses de R-D d'un pays à l'autre. On ne pourrait procéder à des comparaisons détaillées qu'en convertissant en une même monnaie les sommes libellées en monnaie nationale au moyen de taux de change spécialement applicables aux activités de R-D. Les taux de change officiels ne reflètent pas toujours le coût réel des activités de R-D, et les comparaisons établies sur la base de ces taux peuvent conduire à des conclusions trompeuses; toutefois, elles peuvent être utilisées pour donner une idée de l'ordre de grandeur.

Tableau 42: Brevets

Les brevets sont délivrés par les offices nationaux des brevets, ou par des offices régionaux qui desservent plusieurs pays, par exemple l'Office européen des brevets et l'Organisation régionale africaine de la propriété intellectuelle. Dans le cadre de ces systèmes régionaux, le déposant demande la protection de son invention dans un ou plusieurs pays, et chaque pays décide d'accorder ou non cette protection dans les limites de ses frontières. Le Traité de coopération en matière de brevets (PCT) administré par l'Organisation mondiale de la propriété intellectuelle (OMPI) prévoit le dépôt d'une demande internationale unique, qui a le même effet que des demandes nationales qui auraient été déposées dans les pays désignés. Les données relatives aux brevets comprennent l'intensité de l'activité brevets, les brevets délivrés et les brevets en vigueur. L'intensité de l'activité est présente sous la forme du nombre de demandes de brevet émanant de résidents par million d'habitants. Un dépôt émanant d'un résident renvoie à une demande déposée auprès de l'office d'un État ou agissant pour le compte d'un État dans lequel est domicilié le déposant de la demande concernée nommé en premier. La délivrance de brevet obéit au même principe. En vigueur se dit d'un brevet ou tout autre titre de propriété industrielle qui est encore valable. Les demandes de brevet contiennent des renseignements relatifs au pays dans lequel sont domiciliés l'inventeur et le déposant (ou cessionnaire). Les statistiques fondées sur le pays dans lequel est domicilié l'inventeur peuvent indiquer l'endroit où se situe l'invention, alors que les données relatives au pays dans lequel est domicilié le déposant (ou cessionnaire) fournissent des informations sur le titulaire du brevet au moment du dépôt de la demande. Les données sont compilées et publiées par l'OMPI.

Chapitre XVI: Communication

Les données présentées dans les Tableaux 43 à 44 proviennent de la base de données (voir www.itu.int) et l'*Annuaire statistique*, Services de télécommunications de l'Union internationale des télécommunications.

Tableau 43: Abonnés au téléphone mobile

Les abonnés mobiles (et les abonnés mobiles pour 100 habitants) désignent les utilisateurs de téléphones portatifs abonnés à un service automatique public de téléphones mobiles ayant accès au Réseau de téléphone public connecté (RTPC). Sont pris en compte aussi bien les abonnements post-payés que les cartes prépayées. Le nombre d'abonnés pour 100 habitants se calcule en divisant le nombre d'abonnés par la population et en multipliant par 100.

Tableau 44: Utilisation de l'internet

Le tableau indique le pourcentage de personnes qui utilisent l'internet et remplace les statistiques présentées dans des annuaires précédents tels que le nombre (en milliers) d'abonnements à l'internet fixe (filaire) ou le nombre d'abonnements à l'internet fixe (filaire) pour 100 habitants. Cet indicateur permet de mesurer les changements dans l'accès et l'utilisation d'Internet. Dans les pays où de nombreuses personnes accèdent l'internet au travail, à l'école, dans les cybercafés et autres lieux publics, le nombre d'utilisateurs augmente, malgré un nombre limité d'abonnements et le nombre limité des ménages ayant accès à l'internet. Ce phénomène est notamment illustré dans les pays en voie de développement car on y trouve un nombre croissant d'utilisateurs malgré l'accès limité des ménages.

Chapitre XVII: Tourisme international et transport

Les données sur le tourisme international ont été fournies par l'Organisation mondiale du tourisme (l'OMT) qui publie des renseignements détaillés sur le tourisme dans l'*Annuaire des statistiques du tourisme* ou le *Compendium des statistiques du tourisme*, voir www.unwto.org/statistics pour plus d'information. A des fins statistiques, l'expression "visiteur international" désigne "toute personne qui se rend dans un pays autre que celui où elle a son lieu de résidence habituelle, mais différent de son environnement habituel, pour une période de 12 mois au maximum, dans un but principal autre que celui d'y exercer une profession rémunérée". Quatre séries distinctes décrivant les visiteurs internationaux sont présentées dans l'Annuaire et le compendium de l'OMT, cependant une seule série sera sélectionnée pour cet annuaire dans l'ordre de priorité suivant :

| Ordre | Code | Nom de la série |
|-------|------|--|
| 1 | TF | <i>Arrives de touristes non-résidents aux frontières nationales</i> sont les visiteurs qui passent une nuit au moins en logement collectif ou privé dans le pays visité (exclues les visiteurs ne restant que la journée) |
| 2 | VF | <i>Arrives de visiteurs non-résidents aux frontières nationales</i> sont les visiteurs définis dans la série "TF", ainsi que les visiteurs ne restant que la journée, c'est à dire les visiteurs qui ne passent pas la nuit en logement collectif ou privé dans le pays visité |
| 3 | TCE | <i>Arrivées de touristes non-résidents dans tous les types d'établissements d'hébergement touristique</i> |
| 4 | THS | <i>Arrivées de touristes non-résidents dans les hôtels et établissements assimilés</i> |

Ces chiffres ne comprennent pas les immigrants, les résidents frontaliers, les personnes domiciliées dans une zone ou un pays donné et travaillant dans une zone ou pays limitrophe, les membres des forces armées et les membres des corps diplomatique et consulaire lorsqu'ils se rendent de leur pays d'origine au pays où ils sont en poste, et vice versa. Ne sont pas non plus inclus les voyageurs en transit, qui ne pénètrent pas officiellement dans le pays en faisant contrôler leurs passeports, tels que les passagers d'un vol en escale, qui demeurent pendant un court laps de temps dans une aire distincte de l'aérogare, ou les passagers d'un navire qui ne sont pas autorisés à débarquer. Cette catégorie comprend également les passagers transportés directement d'une aérogare à l'autre ou à un autre terminal. Les autres passagers en transit dans un pays sont classés parmi les visiteurs.

Tableau 45: Arrivées de touristes/ visiteurs et dépenses touristiques

Les données relatives aux arrivées des visiteurs non-résidents (ou internationaux) peuvent être obtenues de différentes sources. Dans certains cas, elles proviennent des statistiques des frontières tirées des registres administratifs (contrôles de police, de l'immigration, de la circulation et autres effectués aux frontières nationales), des enquêtes statistiques aux frontières et des enregistrements d'établissements d'hébergement touristique. Les totaux correspondent au nombre total d'arrivées de touristes des régions indiquées sur le tableau. Lorsqu'une personne visite le même pays plusieurs fois dans l'année, il est enregistré un nombre égal d'arrivées. En outre, si une personne visite plusieurs pays au cours d'un seul et même voyage, son arrivée dans chaque pays est enregistrée séparément. Par conséquent, on ne peut pas partir du postulat que les arrivées sont égales au nombre de personnes qui voyagent.

Les dépenses associées à l'activité touristique des visiteurs sont traditionnellement identifiées au poste "Voyages" de la balance des paiements. Dans le cas du tourisme récepteur, ces dépenses associées aux visiteurs non-résidents sont enregistrées dans la balance des paiements comme des "crédits" et il s'agit de "recettes au titre des voyages". Le cadre conceptuel approuvé par la Commission de statistique de l'Organisation des Nations Unies concernant l'évaluation de l'activité touristique à l'échelle macroéconomique (cadre qu'il est convenu d'appeler compte satellite du tourisme) considère que la notion "industries et produits touristiques" englobe le transport de passagers. Par conséquent, une meilleure estimation des dépenses liées au tourisme international que font les visiteurs résidents et non-résidents serait, sous l'angle de la balance des paiements, la somme des valeurs des postes "Voyages" et "Transport de passagers".

Néanmoins, les utilisateurs doivent être conscients que les estimations de la balance des paiements comprennent, outre les dépenses associées aux visiteurs, celles liées à d'autres types d'individus. Les données publiées doivent permettre la comparabilité internationale et donc correspondre à celles publiées par le Fonds monétaire international (FMI) qui viennent des banques centrales, les exceptions sont indiquées dans le *Compendium des statistiques du tourisme* ou l'*Annuaire des statistiques du tourisme*, voir www.unwto.org/statistics pour plus d'informations.

Tableau 46: Tourisme à l'étranger

Tourisme à l'étranger comporte départs en milliers et dépenses en millions de dollars E.-U. Les indicateurs relatifs aux dépenses touristiques dans d'autres pays sont équivalents à ceux du tourisme récepteur mais ils sont enregistrés comme "débits" aux postes "Voyages" et "Transport de passagers" de la balance des paiements. Les données publiées sont également fournies par le FMI. Il y a lieu de faire la même mise en garde que plus haut. On trouvera plus de renseignements publiés par l'Organisation mondiale du tourisme dans le *Compendium des statistiques du tourisme*, voir <http://www.unwto.org/statistics>; et des renseignements sur la balance des paiements sont publiés par le Fonds monétaire international dans *Balance of Payments Statistics Yearbook*.

Tableau 47: Aviation civile: trafic aérien régulier

Les données relatives au trafic total se rapportent aux services réguliers, intérieurs ou internationaux des compagnies de transport aérien enregistrées dans chaque pays. Les services réguliers comprennent aussi les vols supplémentaires nécessités par un surcroît d'activité des services réguliers et les vols préparatoires en vue de nouveaux services réguliers. Les données sont préparées par l'Organisation de l'aviation civile internationale (voir www.icao.int).

Les termes ci-après ont été utilisés dans le tableau ;

- Kilomètres parcourus – le nombre de kilomètres parcourus équivalent à la somme des produits du nombre de vols payants effectués sur chaque étape par la longueur de l'étape.
- Passagers transportés – pour calculer le nombre de passagers transportés, on compte chaque passager d'un vol donné (correspondant à un numéro de vol) une seule fois et non pour chacune des étapes de ce vol; toutefois, les passagers qui voyagent sur une étape internationale et sur une étape intérieure d'un même vol doivent être comptés à la fois comme passagers d'un vol intérieur et comme passagers d'un vol international.
- Passager-kilomètre réalisé – un passager-kilomètre est réalisé lorsqu'un passager est transporté sur une distance d'un kilomètre. Le nombre de passagers-kilomètre réalisées équivaut à la somme des produits du nombre de passagers payant transportés sur chaque étape par la longueur de l'étape. Le total obtenu est égal au nombre de kilomètres parcourus par l'ensemble de passagers.
- Tonnes-kilomètres réalisées – la tonne-kilomètre est une unité de mesure qui correspond au déplacement d'une tonne métrique de charge payante sur un kilomètre. Les tonnes-kilomètres réalisées sont la somme des produits du nombre de tonnes de charge payante (passagers, fret, envois postaux) transportés sur chaque étape par la longueur de l'étape.

Chapitre XVII: Aide au développement

Tableau 48: Versements nette d'aide publique au développement aux bénéficiaires

Le tableau présente les estimations des flux de ressources financières mises à la disposition des pays soit directement (aide bilatérale) soit par l'intermédiaire d'institutions multilatérales (aide multilatérale). Les institutions multilatérales comprennent le Groupe de la Banque mondiale, les banques régionales, les institutions financières de l'Union européenne et un certain nombre d'institutions, de programmes et de fonds d'affectation spéciale des Nations Unies. La source de données est le Comité d'aide au développement (CAD) de l'OCDE, auquel les pays membres ont communiqué des données sur les flux de ressources qu'ils mettent à la disposition des pays et territoires en développement et en transition et des institutions multilatérales. Pour plus de renseignements sur les définitions, méthodes et sources, se reporter à la publication de l'OCDE, la *Répartition géographique des ressources financières allouées aux pays en développement*, voir aussi <http://stats.oecd.org/> pour plus d'informations.

Tableau 49: Versements nette d'aide publique au développement par des donateurs

Le tableau présente les dépenses que les pays donateurs consacrent à l'aide publique au développement (APD). Ces chiffres incluent les contributions des donateurs à des agences multilatérales, de sorte que les totaux diffèrent de ceux du tableau 48, qui incluent les dépenses des agences multilatérales.

Tableau 50: Assistance en matière de développement socioéconomique fournie par le système des Nations Unies

Le tableau présente des données sur les dépenses consacrées à des activités opérationnelles pour le développement par les organisations du système des Nations Unies. Par "activités opérationnelles", on entend en général les activités ayant trait à la coopération au développement, qui visent à mobiliser ou à accroître les potentialités et aptitudes que présentent les pays pour promouvoir le développement et le bien-être économiques et sociaux, y compris les transferts de ressources vers les pays ou régions en développement sous forme tangible ou non. Les dépenses consacrées aux activités opérationnelles pour le développement sont financées au moyen de contributions que les gouvernements et d'autres sources officielles et non officielles apportent à divers organes de financement, tels que fonds et programmes du système des Nations Unies. On peut citer notamment les contributions au Programme des Nations Unies pour le développement, les contributions aux fonds gérés par le Programme des Nations Unies pour le développement, les contributions régulières (budgétaires) et les contributions extrabudgétaires aux institutions spécialisées. Les données sont extraites du rapport annuel 2013 (non encore publié) du Secrétaire général à la session de l'Assemblée générale sur les activités opérationnelles pour le développement.

Annex III

Conversion coefficients and factors

The metric system of weights and measures is employed in the *Statistical Yearbook*. In this system, the relationship between units of volume and capacity is: 1 litre = 1 cubic decimetre (dm³) exactly (as decided by the 12th International Conference of Weights and Measures, New Delhi, November 1964).

Section A shows the equivalents of the basic metric, British imperial and United States units of measurements. According to an agreement between the national standards institutions of English-speaking nations, the British and United States units of length, area and volume are now identical, and based on the yard = 0.9144 metre exactly. The weight measures in both systems are based on the pound = 0.45359237 kilogram exactly (*Weights and Measures Act 1963* (London), and *Federal Register announcement of 1 July 1959: Refinement of Values for the Yard and Pound* (Washington D.C.)).

Section B shows various derived or conventional conversion coefficients and equivalents.

Section C shows other conversion coefficients or factors which have been utilized in the compilation of certain tables in the *Statistical Yearbook*. Some of these are only of an approximate character and have been employed solely to obtain a reasonable measure of international comparability in the tables.

For a comprehensive survey of international and national systems of weights and measures and of units' weights for a large number of commodities in different countries, see *World Weights and Measures*.

A. Equivalents of metric, British imperial and United States units of measure

| Metric units Unités métriques | British imperial and US equivalents Equivalents en mesures britanniques et des États-Unis | British imperial and US units Unités britanniques et des États-Unis | Metric equivalents Equivalents en mesures métriques |
|--|--|--|--|
| Length — Longueur | | | |
| 1 centimetre – centimètre (cm) | 0.3937008 inch | 1 inch | 2.540 cm |
| 1 metre – mètre (m) | 3.280840 feet | 1 foot | 30.480 cm |
| | 1.093613 yard | 1 yard | 0.9144 m |
| 1 kilometre – kilomètre (km) | 0.6213712 mile | 1 mile | 1609.344 m |
| | 0.5399568 international nautical mile | 1 international nautical mile | 1852.000 m |
| Area — Superficie | | | |
| 1 square centimetre – (cm ²) | 0.1550003 square inch | 1 square inch | 6.45160 cm ² |
| 1 square metre – (m ²) | 10.763910 square feet | 1 square foot | 9.290304 dm ² |
| | 1.195990 square yards | 1 square yard | 0.83612736 m ² |
| 1 hectare – (ha) | 2.471054 acres | 1 acre | 0.4046856 ha |
| 1 square kilometre – (km ²) | 0.3861022 square mile | 1 square mile | 2.589988 km ² |
| Volume | | | |
| 1 cubic centimetre – (cm ³) | 0.06102374 cubic inch | 1 cubic inch | 16.38706 cm ³ |
| 1 cubic metre – (m ³) | 35.31467 cubic feet | 1 cubic foot | 28.316847 dm ³ |
| | 1.307951 cubic yards | 1 cubic yard | 0.76455486 m ³ |
| Capacity — Capacité | | | |
| 1 litre (l) | 0.8798766 British imperial quart | 1 British imperial quart | 1.136523 l |
| | 1.056688 U.S. liquid quart | 1 U.S. liquid quart | 0.9463529 l |
| | 0.908083 U.S. dry quart | 1 U.S. dry quart | 1.1012208 l |
| 1 hectolitre (hl) | 21.99692 British imperial gallons | 1 British imperial gallon | 4.546092 l |
| | 26.417200 U.S. gallons | 1 U.S. gallon | 3.785412 l |
| | 2.749614 British imperial bushels | 1 imperial bushel | 36.368735 l |
| | 2.837760 U.S. bushels | 1 U.S. bushel | 35.239067 l |

Annexe III

Coefficients et facteurs de conversion

L'*Annuaire statistique* utilise le système métrique pour les poids et mesures. La relation entre unités métriques de volume et de capacité est: 1 litre = 1 décimètre cube (dm³) exactement (comme fut décidé à la Conférence internationale des poids et mesures, New Delhi, novembre 1964).

La section A fournit les principaux équivalents des systèmes de mesure métrique, britannique et américain. Suivant un accord entre les institutions de normalisation nationales des pays de langue anglaise, les mesures britanniques et américaines de longueur, superficie et volume sont désormais identiques, et sont basées sur le yard = 0.9144 mètre exactement. Les mesures de poids se rapportent, dans les deux systèmes, à la livre (pound) = 0.45359237 kilogramme exactement (*Weights and Measures Act 1963* (Londres), et *Federal Register Announcement of 1 July 1959: Refinement of Values for the Yard and Pound* (Washington, D.C.)).

La section B fournit divers coefficients et facteurs de conversion conventionnels ou dérivés.

La section C fournit d'autres coefficients ou facteurs de conversion utilisés dans l'élaboration de certains tableaux de l'*Annuaire statistique*. Certains coefficients ou facteurs de conversion ne sont que des approximations et ont été utilisés uniquement pour obtenir un degré raisonnable de comparabilité sur le plan international.

Pour une étude d'ensemble des systèmes internationaux et nationaux de poids et mesures, et d'unités de poids pour un grand nombre de produits dans différents pays, voir *World Weights and Measures*.

A. Equivalents des unités métriques, britanniques et des États-Unis

| Metric units Unités métriques | British imperial and US equivalents Equivalents en mesures britanniques et des Etats-Unis | British imperial and US units Unités britanniques et des Etats- Unis | Metric equivalents Equivalents en mesures métriques |
|----------------------------------|---|--|--|
| Weight or mass — Poids | | | |
| 1 kilogram (kg) | 35.27396 av. ounces | 1 av. ounce | 28.349523 g |
| | 32.15075 troy ounces | 1 troy ounce | 31.10348 g |
| | 2.204623 av. pounds | 1 av. pound | 453.59237 g |
| 1 ton – tonne (t) | | 1 cental (100 lb.) | 45.359237 kg |
| | 1.1023113 short tons | 1 hundredweight (112 lb.) | 50.802345 kg |
| | 0.9842065 long tons | 1 short ton (2 000 lb.) | 0.9071847 t |
| | | 1 long ton (2 240 lb.) | 1.0160469 t |

B. Various conventional or derived coefficients

Air transport

1 passenger-mile = 1.609344 passenger kilometre
 1 short ton-mile = 1.459972 tonne-kilometre
 1 long ton-mile = 1.635169 tonne kilometre

Electric energy

1 Kilowatt (kW) = 1.34102 British horsepower (hp)
 1.35962 cheval vapeur (cv)

C. Other coefficients or conversion factors employed in *Statistical Yearbook* tables

Roundwood

Equivalent in solid volume without bark.

Sugar

1 metric ton raw sugar = 0.9 metric ton refined sugar
 For the United States and its possessions:
 1 metric ton refined sugar = 1.07 metric tons raw sugar

Energy

1 metric ton peat = .325 metric ton of coal oil equivalent
 1 ton oil equivalent = .4186 GJ or 11.63 MWh

B. Divers coefficients conventionnels ou dérivés

Transport aérien

1 voyageur (passager) – kilomètre = 0.621371 passenger-mile
 1 tonne-kilomètre = 0.684945 short ton-mile
 0.611558 long ton-mile

Energie électrique

1 British horsepower (hp) = 0.7457 kW
 1 cheval vapeur (cv) = 0.735499 kW

C. Autres coefficients ou facteurs de conversion utilisés dans les tableaux de l'*Annuaire statistique*

Bois rond

Equivalences en volume solide sans écorce.

Sucre

1 tonne métrique de sucre brut = 0.9 tonne métrique de sucre raffiné
 Pour les États-Unis et leurs possessions:
 1 tonne métrique de sucre raffiné = 1.07 tonne métrique de sucre brut

Energie

1 tonne métrique d'équivalent charbon = 3.08 tonnes métrique de tourbe
 1 GJ = 2.39 tonne d'équivalent pétrol or 1 MWh = .086 tonne métrique d'équivalent pétrol

Annex IV - Tables added, omitted and discontinued

A. Tables added

The present issue of the *Statistical Yearbook* includes the following tables which were not presented in the previous issue:

| | |
|----------|---|
| Table 2 | Population, rate of increase, birth and death rates, surface area and density |
| Table 4 | Population and rates of growth in urban areas and capital cities (previously Population in urban and rural areas, rates of growth and largest urban agglomeration population) |
| Table 8 | Education at the primary, secondary and tertiary levels |
| Table 11 | Health personnel |
| Table 12 | Expenditure on health |
| Table 16 | International reserves, excluding gold |
| Table 21 | Employment by economic activity |
| Table 22 | Consumer price indices |
| Table 27 | Meat and fish (previously separate tables) |
| Table 31 | Cement |
| Table 32 | Woven cotton and wool |
| Table 33 | Pig iron and crude steel |
| Table 38 | Threatened species |
| Table 42 | Patents |
| Table 43 | Cellular phones |
| Table 47 | Civil aviation |

B. Tables omitted

The following tables which were presented in previous issues are not presented in the present issue. They will be updated in future issues of the *Yearbook* when new data become available:

- Aluminium, unwrought
- Cigarettes
- Cinema infrastructure
- Exchange rates
- Fertilizers
- Food supply
- Manufactured goods exports
- Paper and paperboard
- Personnel in research and development (R & D)
- Production, trade and consumption of commercial energy
- Rates of discount of central banks
- Tourist/visitor arrivals by region of origin
- Wages in manufacturing

C. Tables discontinued

The following *world and regional summary* tables presented in previous issues will be merged with the equivalent country and area table:

- Index numbers of industrial production, world and regions
- Index numbers of per capita agricultural and food production
- Index numbers of total agricultural and food production
- Population, rate of increase, birth and death rates, surface area and density
- Production, trade and consumption of commercial energy
- Total imports and exports: index numbers

The following tables have been discontinued:

- Daily newspapers
- Footwear production (uppers of leather)
- Household washing and drying machines
- Implicit price deflators of gross domestic product
- Livestock
- Machine tools
- Oil crops
- Ozone-depleting chlorofluorocarbons (CFCs)
- Passenger cars production
- People living with HIV
- Pesticides production
- Population below minimum level of dietary energy consumption
- Radio and television receivers production
- Refrigerators production (for household use)
- Sawnwood production
- Telephones
- Trucks

Annexe IV - Tableaux ajoutés, supprimés et discontinués

A. Tableaux ajoutés

Dans ce numéro de l'*Annuaire statistique*, les tableaux suivants n'ont pas été présentés dans le numéro antérieur, et ont été ajoutés:

| | |
|------------|---|
| Tableau 2 | Population, taux d'accroissement, taux de natalité, taux de mortalité, superficie et densité |
| Tableau 4 | Population et taux de croissance dans les zones urbaines et capitales (précédemment Population urbaine, population rurale, taux d'accroissement et population de l'agglomération urbaine la plus peuplée) |
| Tableau 8 | Enseignement primaire, secondaire et supérieur |
| Tableau 11 | Personnel de santé |
| Tableau 12 | Dépenses afférentes à la santé |
| Tableau 16 | Réserves internationales, l'or non compris |
| Tableau 21 | Emploi par activité économique |
| Tableau 22 | Indices des prix à la consommation |
| Tableau 27 | Viande et halieutique (tableaux distincts auparavant) |
| Tableau 31 | Ciment |
| Tableau 32 | Tissus de coton et tissages de laine |
| Tableau 33 | Fonte et acier brut |
| Tableau 38 | Espèces menacées |
| Tableau 42 | Brevets |
| Tableau 43 | Abonnés au téléphone mobile |
| Tableau 47 | Aviation civile: trafic aérien régulier |

B. Tableaux supprimés

Les tableaux suivants qui ont été repris dans les éditions antérieures n'ont pas été repris dans la présente édition. Ils seront actualisés dans les futures livraisons de l'*Annuaire* à mesure que des données nouvelles deviendront disponibles:

- Aluminium non travaillé
- Arrivées de touristes/visiteurs par régions de provenance
- Cigarettes
- Cours des changes
- Disponibilités alimentaires
- Engrais
- Exploitation cinématographique
- Exportations des produits manufactures
- Papiers et cartons
- Personnel employé dans la recherche et le développement
- Production, commerce et consommation d'énergie commerciale
- Salaires dans les industries manufacturières
- Taux d'escompte des banques centrales

C. Tableaux discontinués

Les tableaux récapitulatifs régionaux et mondiaux qui figuraient dans les éditions précédentes, seront désormais intégrés dans les tableaux par pays correspondants:

- Importations et exportations totales : indices
- Indices de la production agricole et de la production alimentaire par habitant

- Indices de la production agricole totale et de la production alimentaire
- Indices de la production industrielle
- Population, taux d'accroissement, taux de natalité, taux de mortalité, superficie et densité
- Production, commerce et consommation d'énergie commerciale

Les tableaux suivants ont été discontinués:

- Camions
- Cheptel
- Chlorofluorocarbones (CFC) qui appauvrissent la couche d'ozone
- Cultures oléagineuses
- Déflateurs implicites des prix de produit intérieur brut
- Journaux quotidiens
- Machines à laver et à sécher le linge, de type ménager
- Machines-outils
- Population n'atteignant pas le niveau minimal d'apport calorique
- Population vivant avec le VIH
- Production de chaussures à dessus en cuir naturel
- Production de pesticides
- Production de récepteurs de radio et de télévision
- Production de réfrigérateurs à usage domestique
- Production de sciages
- Production de voitures de tourisme
- Téléphones
