INTERNATIONAL COMPARISON PROJECT: A REVIEW OF MAJOR ISSUES AND PLANS FOR ITS FUTURE DEVELOPMENT

Corrigendum

Foot-note 14, second sentence

For in the case of three countries, where I is a price index and j, k and l are countries, there is transitivity when $I = I_{j/l} \times I_{j/l}$ where $I_{j/k}$ is the purchasing power parity (PPP) for the jth country relative to the kth country.

Read In the case of three countries, where I is a price index and j, k and l are countries, there is transitivity when $I_{j/k} = I_{j/l} \times I_{k/l}$ where $I_{j/k}$ is the purchasing power parity (PPP) for the jth country relative to the kth country.
