

Statistical Commission  
Forty-seventh session  
8–11 March 2016  
Item 4 (i) of the provisional agenda  
**Environment statistics**

Background document  
Available in English only

**BACKGROUND DOCUMENT TO THE REPORT OF  
THE SECRETARY-GENERAL ON ENVIRONMENT  
STATISTICS (E/CN.3/2016/27)**

Prepared by the United Nations Statistics Division

1 February 2016

## **Introduction**

The present background document complements the Report of the Secretary-General on Environment Statistics to the United Nations Statistical Commission at its forty-seventh session, 8-11 March 2016 in New York.<sup>1</sup>

The purpose of the document is two-fold: firstly, to provide a more detailed summary of the progress in the collection of environment statistics carried out by the United Nations Statistics Division (UNSD) in the context of expected increasing demand of environment statistics needed for the Sustainable Development Goal (SDG) indicators; and secondly, to offer a panorama of environment statistics data collections by UNSD and partner agencies at the international level that are relevant for the environment statistics domain.

The document contains two parts. Part I provides an analysis of the results of the UNSD/UNEP Questionnaire 2013 on Environment Statistics (Water and Waste), by variable for the years 2000 to 2012. The Environment Statistics Section of UNSD has conducted seven data collection rounds over the last 14 years, with the most recent one in 2013 requesting data from 173 countries.

Part II contains an inventory of regular, international environmental data collection, reporting and dissemination from countries undertaken by the United Nations, its specialized agencies, intergovernmental organizations and conventions. This inventory has been compiled by the Environment Statistics Section of UNSD in collaboration with the members of the Intersecretariat Working Group on Environment Statistics (IWG-ENV) and other partner organizations.

---

<sup>1</sup> E/CN.3/2016/27 (<http://unstats.un.org/unsd/statcom/47th-session/documents/2016-27-Environment-statistics-E.pdf>). Item 4(i) of the provisional agenda of the forty-seventh session of the United Nations Statistical Commission.

# **PART I**

## **Analysis of the results of the UNSD/UNEP Questionnaire 2013 on Environment Statistics (Water and Waste)**

1. Part I is complementary to Section C. Data collection and dissemination activities (paras. 13-19) of the Report of the Secretary-General on Environment Statistics<sup>2</sup> and should be read accordingly. It includes Table 1 which illustrates the coverage and responses to the UNSD/UNEP Questionnaire on Environment Statistics for the seven data collection rounds, and several tables (Tables WI-W5, Tables R1-R4) of responses to each environment statistics variable in the UNSD/UNEP Environment Statistics data collection.

2. As mentioned in Section C of the Report of the Secretary-General on Environment Statistics, according to the agreement between the Organisation for Economic Cooperation and Development (OECD), Statistical Office of the European Union (EUROSTAT) and UNSD, the countries covered by the joint OECD/EUROSTAT Questionnaire on the State of the Environment are not covered in the UNSD/UNEP Questionnaire on Environment Statistics data collection to avoid duplication and minimize reporting burden of countries. Both data collection processes are well coordinated and the questionnaires are fully compatible using identical definitions and classifications. The UNSD/UNEP Questionnaire is sent to all non-OECD/Eurostat countries and areas (countries and areas are hereafter referred to as countries), covering two sections for statistics on waste and water. Those environment statistics already being collected by other United Nations agencies and other international organizations are excluded from the UNSD/UNEP Questionnaire on Environment Statistics.

3. This data collection through the UNSD/UNEP Questionnaire on Environment Statistics was first conducted in 1999, with a request for data from 168 countries. Six subsequent data collection rounds have taken place, with the most recent one in 2013 requesting data from 173 countries. The next data collection round will take place in 2016. As indicated in the Report of the Secretary-General on Environment Statistics, in the 1999, 2001 and 2004 data collection rounds, UNSD obtained data on air, land, waste and water, but in harmonizing with other international data collections, as of 2006, UNSD has collected data solely on waste and water. This arrangement has allowed UNSD to focus its limited resources on relevant specific themes and to avoid duplication on selected tables.

4. The UNSD/UNEP Questionnaire on Environment Statistics is the main instrument of the regular biennial data collection on water and waste which serves as

---

<sup>2</sup> E/CN.3/2016/27 (<http://unstats.un.org/unsd/statcom/47th-session/documents/2016-27-Environment-statistics-E.pdf>).

a very credible data source for different uses, including compiling related Sustainable Development Goal (SDG) indicators.

5. To promote data quality assurance UNSD carries out extensive data validation procedures that include built-in automated procedures, manual checks and cross-references to national sources of data. Communication is carried out with countries for clarification and validation of data. UNSD does not make any estimation or imputation for missing values so the number of data points provided are actual country data. Only data that are considered accurate or those confirmed by countries during the validation process are included in UNSD’s environment statistics database and disseminated on UNSD’s website.

6. Table 1 below presents the number of countries that received the questionnaire and the number of responses. Although the trend shows an increasing number of responses from the inception of data collection, more capacity building efforts still need to be made.

**Table 1: UNSD/UNEP Questionnaire on Environment Statistics: coverage and responses**

<b>Year that UNSD/UNEP Questionnaire was sent:</b>	<b>1999</b>	<b>2001</b>	<b>2004</b>	<b>2006</b>	<b>2008</b>	<b>2010</b>	<b>2013</b>
<b>Number of countries to which the questionnaire was sent to:</b>	168	177	158	163	171	172	173
<b>Number of responses from countries (water and/or waste):</b>	49	62	68	78	83	83	81

7. With direct relevance to the SDGs, existing and future data collected by UNSD will be invaluable, in particular for the SDG targets that require environment statistics. Given the importance of producing national data on water and waste for quality and informed decision making, and that these data are extremely pertinent to monitoring SDGs 6, 11 and 12, it is critical to improve the production of environment statistics, and increase training and capacity building in environment statistics. The number of responses to the UNSD/UNEP Questionnaire relevant to these SDGs is presented in Table 3 of the Report of the Secretary-General on Environment Statistics<sup>3</sup>.

---

<sup>3</sup> Ibid.

8. The Questionnaire's two sections on water and waste each consist of five data collection tables.<sup>4</sup> Despite the fact that UNSD has now undertaken seven data collections on waste and water statistics and that the data are gradually improving, responses to individual variables of 32 out of a possible 173, for example, in the case of precipitation in the year 2012, reveal the great need for capacity development within countries in the domain of environment statistics.

9. The following tables (Tables W1-W5, Tables R1-R4) present the number of responses to all variables in the latest data collection round (the 2013 collection round) for the years 2000 to 2012 for both water and waste respectively. As evident from the tables, data completeness and data quality remain a challenge, in particular for developing countries. National capacity constraints (financial, human, technical) continue to be a concern for many countries. Furthermore, there still remains inadequate institutional set-up and collaboration in environment statistics.

10. Environment statistics is still a relatively new domain which relates to the environmental pillar being the weakest of the three pillars in sustainable development in terms of monitoring and measurability. Environment statistics are multi-purpose and serve many fundamental needs and uses, including environmental indicators, SDG indicators and environmental-economic accounts, so perseverance is important. Capacity building is key to improving environment statistics and the Environment Statistics Section of UNSD is assisting countries in strengthening their statistical capacity through training workshops and direct country assistance.

---

<sup>4</sup> The management of municipal waste (city level) table is excluded from the analysis since including it would risk double-counting in cases where countries provide data for multiple cities.

## **PART II**

# **International Environmental Data Collection, Reporting and Dissemination**

11. Part II presents an inventory (Table 2) of regular, international environmental data collection, reporting and dissemination from countries undertaken by the United Nations, its specialized agencies, intergovernmental organizations and conventions.<sup>5</sup> Table 2 includes institutions that conduct regular data collection based on a standardized reporting format. Countries provide data to these institutions through questionnaires, national communications or on-line reporting. This inventory has been compiled by the Environment Statistics Section of UNSD in collaboration with the members of the Intersecretariat Working Group on Environment Statistics (IWG-ENV)<sup>6</sup> and other partner organizations. UNSD prepared a first draft of the inventory based on knowledge and research and then circulated it to the institutions that provided invaluable input and contributed to shape and complete this output.

12. The purpose of this mapping exercise was to collectively construct a synthesis of environment statistics data collection processes at the international level. The specific objectives were to:

- support institutions' continuous efforts to promote data sharing and exchange mechanisms on the basis of common data templates and to encourage in-depth assessment of data being collected;
- provide a platform to compare and harmonize data collection from a methodological point of view; and
- provide countries and institutions with a picture of data flows from various national sources with the intention to reduce reporting burden and avoid duplication of efforts, both at the national and international levels.

13. This mapping exercise is a first step towards developing a full scale inventory of environmental data collection which will provide more specification details such as on:

- the type of national institution that provides the data and the focal point;
- methodological guidance used for the data collection;
- the data validation process;
- an assessment of the data quality; and
- information on whether data are collected/reported on regularly or only when an occasion occurs (such as a natural disaster or declaration of a protected area), etc.

---

<sup>5</sup> Henceforth, United Nations, its specialized agencies, intergovernmental organizations and conventions will be referred to as institutions.

<sup>6</sup> The IWG-ENV was established in response to a request by the thirty-fourth session of the United Nations Statistical Commission (<http://unstats.un.org/unsd/statcom/34th-session/documents/statcom-2003-34th-report-E.pdf>). The Statistical Commission empowered UNSD to convene the IWG-ENV to coordinate and harmonize the development of standards, methods, data collections and capacity building programmes in environment statistics.

**Table 2: International environmental data collection, reporting and dissemination**

Name of organization/institution	Description of data collection	Geographical coverage	Temporal coverage	Periodicity	Outputs
