UNITED NATIONS**

FAO work on classifications for agricultural statistics

Pietro Gennari

FAO Chief Statistician

Director of the Statistics Division

Valentina Ramaschiello

Classifications Expert

UNSC/47 Session

10 March 2016, New York

Side Event on Classifications
Related to Trade & Agriculture

main areas of FAO work on international classifications

implement

international classifications
in FAO

review & improve

international classifications
to suit the needs of agricultural
statistics and FAO activities

assist countries

implement international
classifications at the
national level

why is this important for FAO?

increased data
comparability and **integration**
across different domains

positive impact on data
quality and **availability**

production, trade stats & food security

number of undernourished people in the world depends on estimates on **food potentially available** for consumption which is calculated by FAO through **Food Balance Sheets (FBS)**

FBS show for each food item the sources of supply & its utilization ($S=U$)

the balance is done at commodity level: high detail is needed

new sub-classes

problem

- ❑ CPC is a general scope classification
- ❑ FAO is a sector-specific organization
- ❑ more detail needed on food & agriculture products

solution

CPC EXPANDED

**for agriculture & food
(7 digits)**

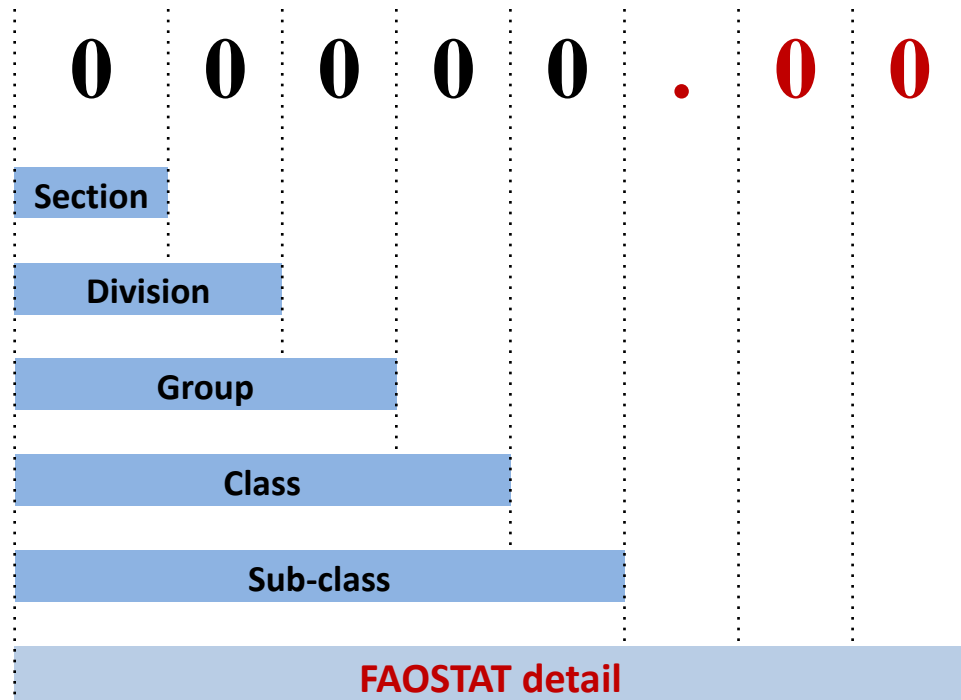

**now an official annex to CPC Ver.2.1
105 additional codes**

CPC expanded code

one more level to accommodate FAO detail

countries
can use it to identify
local products
while ensuring data
comparability
at the global level

**Assist countries
implement
international
classifications at the
national level**

FAO global survey
on national classifications
for agriculture and food products

60%

of countries that participated in the survey
asked for capacity development
by FAO on classifications for agricultural statistics

FAO responded developing the

**FAO-UNSD joint
publication
funded &
coordinated by the
Global Strategy to
Improve
Agricultural &
Rural Statistics**

Guidelines on International Classifications for Agricultural Statistics

aims to

- ❑ **bring together comprehensive information** on statistical classifications, in particular those used for agricultural statistics;
- ❑ **equip the user with a better understanding** of these schemes
- ❑ **support the application** of international standards at the national level
- ❑ **facilitate countries engagement** in international governance mechanisms

some of the questions you'll be able to answer

how can countries benefit from ICs?

how to adapt ICs to country needs?

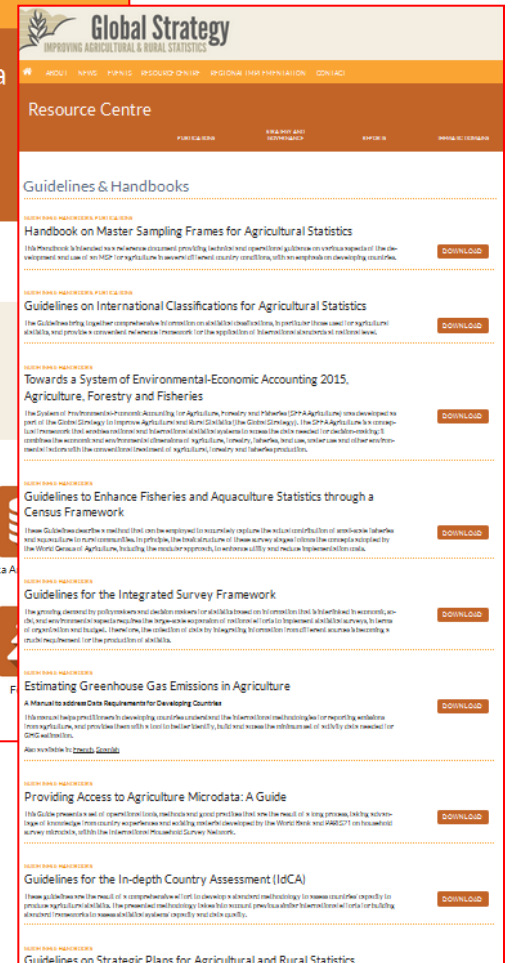

how can countries participate to ICs review?

how to convert data from one classification to another?

which solutions can be adopted to face challenges?

which ICs are relevant to agricultural statistics?

what are their features?

<http://gsars.org>

→ resource centre

→ guidelines & handbooks

take-home messages

countries involvement is vital to
relevance and uptake of ICs worldwide

countries are encouraged to

use international classifications for agri.stats.

participate in their review

contact FAO classifications unit

ask for support

take-home messages

**countries can greatly benefit
from international classifications**

save resources

integrate country data at the global level

improve statistics at the national level

better statistics for all!
