Migration System: goals and advantages

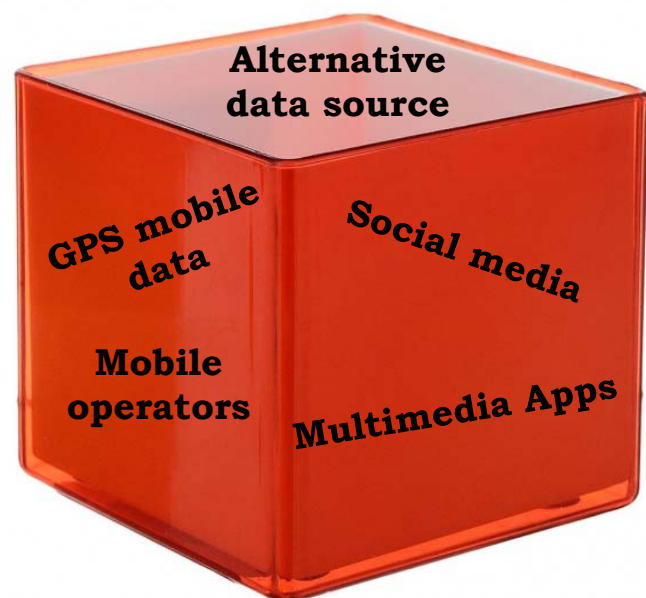

- Collection and processing of data from various institutions on migration
- Data storage and presentation in a structured way
- Analytical tables or separate indicators for description and analysis of migration processes
- User access to aggregated and depersonalized data
- Presentation on data based on GIS

RUSSIAN FEDERATION

FEDERAL STATE
STATISTICS SERVICE

Using Big Data to define various characteristics of migrants

- Alternative data source on migration
- Integration of data from various sources with official statistics
- Mobile operators' geoanalytics, GPS mobile data
- Geolocation data from social media users and multimedia Apps

Expected outcomes:

- ✓ Single-step online submission of statistical data to all public authorities

- ✓ Production and application of analytical indicators for decision-making

- ✓ Compilation of migration data from all national authorities

- ✓ Integration of information systems of Eurasian Economic Union member states
