Statistics Poland welcomes the interesting and insightful report and supports the way forward to develop the outcome document for the 3rd UN World Data Forum. We find the work plan of the HLG-PCCB for 2021 both ambitious and reasonable.

Due to its overarching and multidimensional nature, the issue of data stewardship is being discussed widely and thoroughly in many international groups and teams. Statistics Poland actively participates in the discussions. In this context, the background document Approaches to data stewardship, prepared by the HLG-PCCB, constitute an important voice in the debate. We support creating the new working group within the Commission and express our commitment to being engaged in its works.

What should not be lost of sight, however, is the necessity of striving for synergies. Therefore a dialogue among different international groups working on the topic of data stewardship would be very welcome.
