How do we ensure inclusive and disaggregated data continues to inform COVID-19 response and recovery and fuels the pathway to 2030?

Over the past year, governments and organizations have rapidly developed and implemented new data collection and analysis approaches to identify, understand, address, and monitor the needs of vulnerable and marginalized population groups. This data has informed critical COVID-19 policy decisions, such as social protection programs and lockdowns.

The session seeks to share and amplify learnings across institutions to catalyze and strengthen efforts around inclusive and disaggregated data needed to address the pandemic and fulfill the Leave No One Behind commitment.

The session will facilitate an open dialogue to share learnings, best practices, and impact stories around inclusive and disaggregated data. The session will feature lightning presentations from Statistics Canada, Sierra Leone's Ministry of Education and Paraguay's National Institute of Statistics, sharing their approaches to generating inclusive COVID-19 data and associated learnings, alongside an open discussion with all participants.

We invite participants to share their inputs and ideas on the discussion questions through the registration form and shape the session.

Register here.
