Statement provided by:

Statistics Poland

Statement:

Poland aligns itself with the European Union’s common position.

Poland highly esteems the work on data and indicators for the 2030 Agenda, carried out in 2021 by the Inter-Agency and Expert Group on Sustainable Development Goal Indicators.

In particular, we appreciate new guidance and tools for integrating geospatial information and small area estimates into official SDG statistics, such as the SDGs Geospatial Road Map and the Toolkit on Small Area Estimation for the Goals. We are convinced that these latest developments will improve data availability for vulnerable population groups and facilitate SDG monitoring on the subnational level. Statistics Poland has just established a conceptual framework for tracking progress towards SDGs on the regional and local levels. Therefore, new GIS and SAE products will be of great interest to Statistics Poland when selecting and compiling subnational SDG indicators.

Statistics Poland also welcomes a new initiative of IAEG-SDGs to present examples of SDG monitoring at the UN website. Poland is willing to share our latest practice of releasing digital SDG reports, featuring such innovations as interactive maps and graphs and SDG data downloadable in different formats. Statistics Poland’s SDG reports are available at its official website: raportsdg.stat.gov.pl/en/. We hope that other countries will find our practices of SDG communicating helpful and, equally important, we are looking forward to being inspired by other country examples of tracking progress towards SDGs.
