Statement provided by:  
Statistics Poland

Statement:

Statistics Poland greatly appreciates the opportunity to participate actively in the operations of the Data Stewardship Working Group and is honored to co-lead the work of the Group and co-lead and participate in the activities of the workstreams.

We welcome the actions taken by all five workstreams during the previous year, and we recognize efforts taken to increase the understanding of data stewardship and data governance.

We are convinced that, over time, it will be possible to develop and implement the most effective practices in the areas of activities of the Working Group - taking benefits from peer learning and sharing experience.

Poland approves the amended Terms of Reference as presented in the document and the proposed work plan of the Data Stewardship Working Group for the year 2022. We encourage all UN Members to contribute to the vital work of the Group.
