Statement provided by:
Norway

Statement:
Norway welcomes the report from the Economic Commission of Europe. The work on various methodological issues, for example related to national accounts and globalisation, satellite accounts and updates of the 2008 SNA, data collection and statistical productions issues in several areas as well as the development of generic organizational models and tools, are valuable both at the regional and global level. We would underline the importance of UNECE to continue such work and provide guidelines to the benefit of countries.
