Statement provided by:
Mexico-INEGI

Statement:
Mexico supports to consider and adopt the Global Set as the framework for climate change statistics and indicators.

Mexico supports the construction of capabilities in the countries for the implementation of the Global Set and urge the donor community to mobilize additional and substantial resources to build capacity in environment and climate change statistics in developing countries.

Mexico considers that the importance of the involvement of the proper stakeholders, the national agencies responsible for the generation of the source data for statistics should be emphasized, as well as the use of geospatial data for the generation of climate change data.

Mexico suggests to give more consideration to the participation of the Food and Agriculture Organization of the United Nations (FAO) and other relevant organizations.

Mexico considers that the activities already made by the UNSD and the UN Convention on Climate Change to promote the use of statistics for policy making in each country should be leveraged and to continue and enforce the capacity building efforts.

Mexico agrees and supports the actions in section V about the development and implementation of the Global Set of Climate Change Statistics, in coordination with the national CC authorities – agencies.
