

**United Nations Statistical Commission**

**Fifty-third session**

Item 3 (m) of the provisional agenda

**Items for discussion and decision: climate change statistics**

**Document E/CN.3/2022/17 – Report of the Secretary-General on climate change statistics**

<i>Statement provided by:</i> Statistical Office of the Republic of Slovenia	
<i>Statement:</i> Slovenia welcomes the Report of the Secretary-General on Climate Change Statistics. Slovenia commends the thorough and comprehensive work done by UN Statistics Division on the Global Set of Climate Change Statistics and Indicators. We participated in the Global Consultation on the Global Set and we support its adoption. The Statistical Office of the Republic of Slovenia has been publishing the national set of SDG indicators since 2017 and we are planning to start on establishing a set of climate change indicators in the near future. However, the preparation and development of our set of climate change indicators requires joint effort from different national institutions. Therefore the final implementation of climate change indicators will be achieved not only by the statistical office but it depends also on the cooperation between policy makers and other respective institutions.
