Statement provided by:
LITHUANIA

Statement:
Lithuania welcomes the Report of the Working Group on its work which describes open data practices in production of official statistics and the ways forward. We support the approval of the proposed guidance on how to implement an open by default model for dissemination of statistics which could serve as a practical instrument for NSIs. As the Open data issue becomes more relevant, and in order to create innovative new value from data, we support the plan that the Working group on Data stewardship could incorporate the outcomes and continue to work to advance the open data culture. Recognizing the scope and importance of the results the Working Group has produced, we support the proposal that the Working Group on Open data has concluded its activities.
