STATISTICAL COMMISSION
Seventh session

STATISTICAL ORGANIZATION

Panama: draft resolution

The Statistical Commission

Having been informed at its seventh session of the successful completion of an International Seminar on Statistical Organization conducted in October 1952 by the United Nations with the co-operation of the Government of Canada,

Taking note of the great number of countries that showed interest in the subject of statistical organization by participating in this Seminar,

Considering the fact that, based on findings of this Seminar, some countries will undertake the task of surveying their present statistical systems with a view to reorganizing them, and

Considering also that members of the Commission have expressed the view that work in the field of statistical organization should be continued,

Requests the Secretary-General of the United Nations to continue its work in the field of statistical organization and be prepared to give aid, with the co-operation of the Technical Assistance Administration, to those Member States requesting technical assistance in this field.
