Afsane Yazdani, delegate Iran

Item 3 (j). Agriculture and Rural Statistics

- We would like to express our interest in getting involved in Inter-Agency and Expert Group on Agricultural and Rural Statistics. In addition, Iran completed its latest Agriculture Census in 2014 by using Tablet at data collection level and willing to share the experience with the other countries who chose to apply the same approach.
- In order to best apply international guidelines on the use of remote sensing in production of agriculture statistics, it is highly requested that international agencies provide training to relevant national statistical units.
