Outline

- History of U.S. FATS program
- Changes made to improve statistics for services overall
- Changes made for specific types of services
  - Insurance
  - Wholesale & retail trade
  - Banking
United States Data on Operations of MNCs

- First collected MNC operations data for 1950 covering outward investment
- Collection became more regular and detailed in the late 1970s/early 1980s
- Authority: International Investment and Trade in Services Survey Act
  - Surveys are mandatory
  - Data are confidential
- Subject to Paperwork Reduction Act
Adaptation to Services Needs

- Adapted our existing MNC data collection program for services beginning in 1980’s
- Manual on Statistics of International Trade in Services (MSITS 2010) recommends classification by industry
- Product classification is a long-term goal
- As a step towards product classification
  - BEA broke sales out into goods, services, and investment income
  - Also, sales of services broken out by destination
Sales Breakout

- Breakout between goods and services
  - Goods-producing industries can be important suppliers of services
  - For example, U.S. affiliates classified in manufacturing sector were third largest suppliers of services in 2010
- Breakout between services and investment income needed for industries where investment income is included in revenues, such as finance and insurance
## PART II - FINANCIAL AND OPERATING DATA OF U.S. AFFILIATE - Continued

### Section C — DISTRIBUTION OF SALES OR GROSS OPERATING REVENUES

Distribute sales or gross operating revenues among three categories — sales of goods, sales of services, and investment income. For the purpose of this distribution, "goods" are normally outputs that are tangible and "services" are normally outputs that are intangible. When a sale consists of both goods and services and cannot be unbundled (i.e., the goods and services are not separately billed), classify the sales as goods or services based on whichever accounts for a majority of the value. Give best estimates if actual figures are not available.

**NOTE — BEFORE COMPLETING THIS SECTION, PLEASE SEE THE INSTRUCTIONS FOR ITEMS 45 THROUGH 50 ON PAGE 25.** Insurance companies also see page 26, V.A. for special instructions.

**Utilities and Oil & Gas Producers and Distributors** — To the extent feasible, revenues are to be allocated between sales of goods and sales of services. Revenues earned from the sale of a product (e.g., electricity, natural gas, oil, water, etc.) are to be reported as sales of goods. Revenues earned from the distribution or transmission of a product (e.g., fees received for the use of transmission lines, pipelines, etc.) are to be reported as sales of services.

### Part II — FINANCIAL AND OPERATING DATA OF MAJORITY-OWNED FOREIGN AFFILIATE — Continued

**Section B — Distribution of Sales or Gross Operating Revenues** — See Additional Instructions for Part II, Section B, on page 10 at the back of this form.

Distribute sales or gross operating revenues among three categories – sales of goods, sales of services, and investment income. For the purpose of this distribution, “goods” are normally economic outputs that are tangible and “services” are normally economic outputs that are intangible. When a sale consists of both goods and services and cannot be unbundled (i.e., the goods and services are not separately billed), classify the sales as goods or services based on whichever accounts for a majority of the value. Give best estimates if actual figures are not available. Insurance companies also see Special Instructions, B.3.d. and e., page 12.

- **BY TYPE**
  - 48. Sales of goods
  - 49. Sales of services
  - 50. Investment income
Presentation of Data on Services Sold Through Affiliates

- In 1990, began annual presentation that combines data on cross-border (resident/nonresident) trade with data on sales of services through affiliates

- Data on sales of services through affiliates
  - Excluded U.S. cross-border trade, which is recorded in the BOP
  - Covered sales of services only
    - U.S. affiliates: Sales in the United States
    - Foreign affiliates: Sales to foreign persons
  - Covered nonbank majority-owned affiliates only
Measurement Issues

- For services, sales close to output for most industries
  - Exceptions: insurance, wholesale and retail trade, financial intermediaries (banks)
- To address this issue, BEA:
  - Initiated new data collections
  - Developed new methodologies
  - Identified and used data from outside sources
- Named measure “services supplied” to distinguish it from “sales of services” measure it replaced
Insurance Services Sold through Affiliates

- Was measured as services-related operating revenues
  - Mainly premiums
- Recent improvements
  - Allowance for “normal” losses paid
  - Premium supplements
- “Normal” losses (a proxy for insurers’ expectations) from premiums earned
  - To construct this, BEA collected:
    - Premiums earned
    - Losses paid
Premium supplements are the investment income that insurers (other than life insurance) earn on funds they hold on policyholders behalf, called technical reserves.

- Use data collected by BEA surveys on investment income.
- Use data on the domestic insurance industry to calculate the share of investment income from technical reserves in insurers’ total investment income.
- Apply this share to affiliates’ investment income to derive estimate of premium supplements.
Services from Wholesale and Retail Trade

- Was measured as total sales, including the value of the goods sold
- Now measured as trade margins
  - Sales of goods less cost of goods resold
- To construct cost of goods resold, BEA collected:
  - Goods purchased for resale
  - Beginning- and end-of-year inventories of goods for resale
- For years without BEA survey data, update based on changes in trade margins for domestic wholesale and retail trade industries
BEA closed significant data gap by covering bank affiliates annually
- Beginning with 2007 for U.S. affiliates and with 2008 for foreign affiliates

Now covers implicit as well as explicit services supplied
- Explicit—fees and services charges
- Implicit—financial intermediation services indirectly measured (FISIM)
Comparison of Sales of Services to Services Supplied for U.S. Affiliates of Foreign MNCs, 2002

Billions of dollars

Sales of services

Services supplied

Sales of services unaffected by changes

Premiums devoted to settlement of normal losses

Premiums devoted to settlement of normal losses

Wholesale & retail trade services

Premium supplements

Services through bank affiliates

Sales of services unaffected by changes

Sales of services unaffected by changes
Conclusions

- Breaking out sales into goods, services and investment income is a first step to long term goal of providing product detail for services
- Sales not a good measure of output for 3 industries
  - Need to deduct losses paid and add premiums supplements to measure insurance services
  - Need to identify distributive services provided by wholesalers and retailers measured by trade margins
  - Need to measure implicitly charged services provided by banks
- BEA closed significant data gap by covering bank affiliates
