Reminder: Implementation Plan

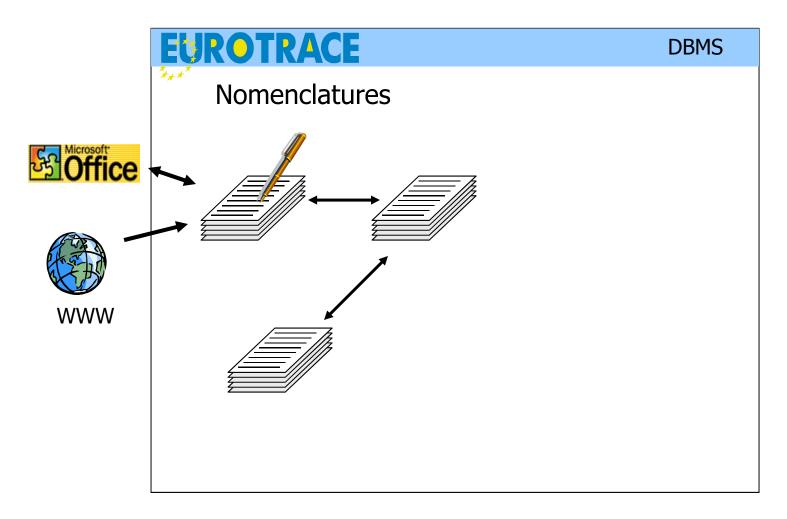

Introduction

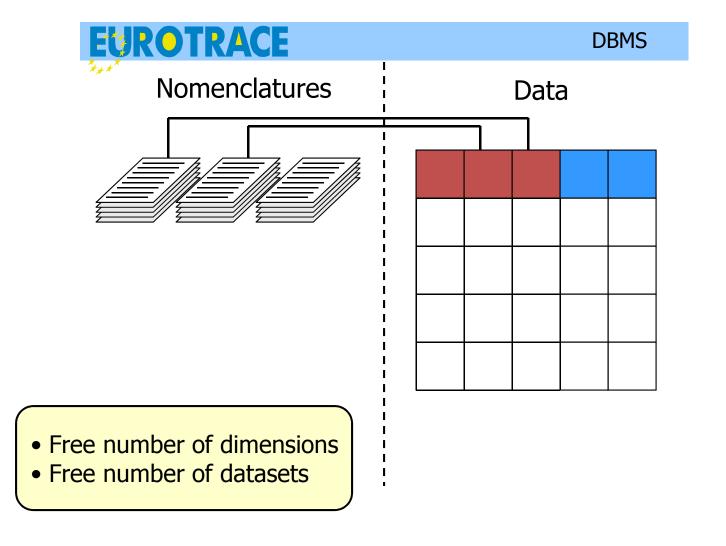

- Eurotrace is a data management and processing software, usually used for IMTS, in conjunction with ASYCUDA
- Eurotrace is Open Source Application (2014)
- Designed for:
 - Managing trade data
 - Implementing processing and checking algorithm
 - Editing and aggregating data
 - Calculating derived trade indicators
 - And can be extended through modules...

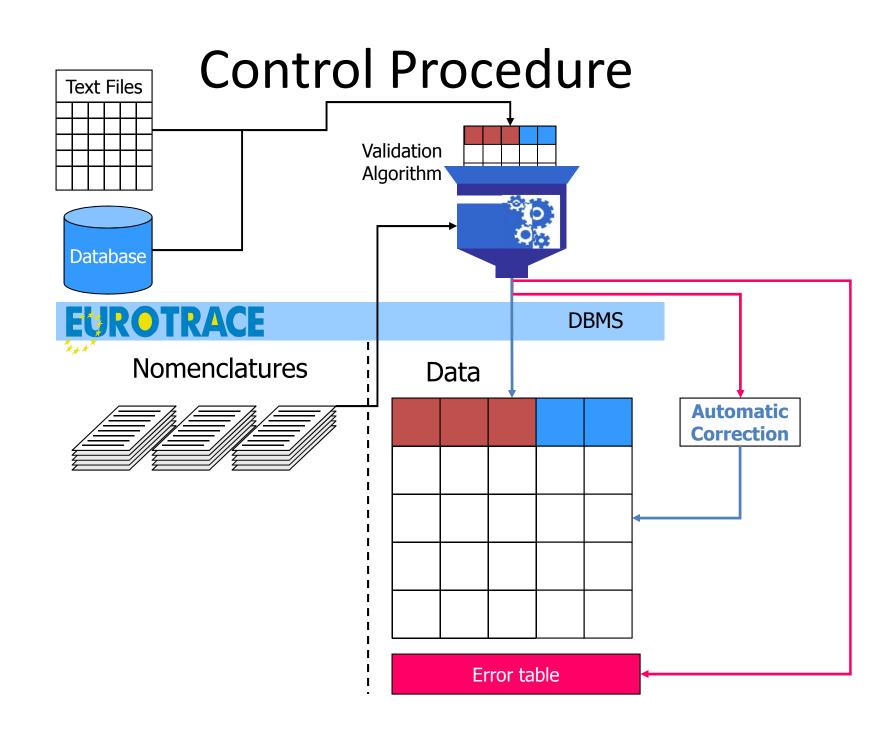

Managing Classification

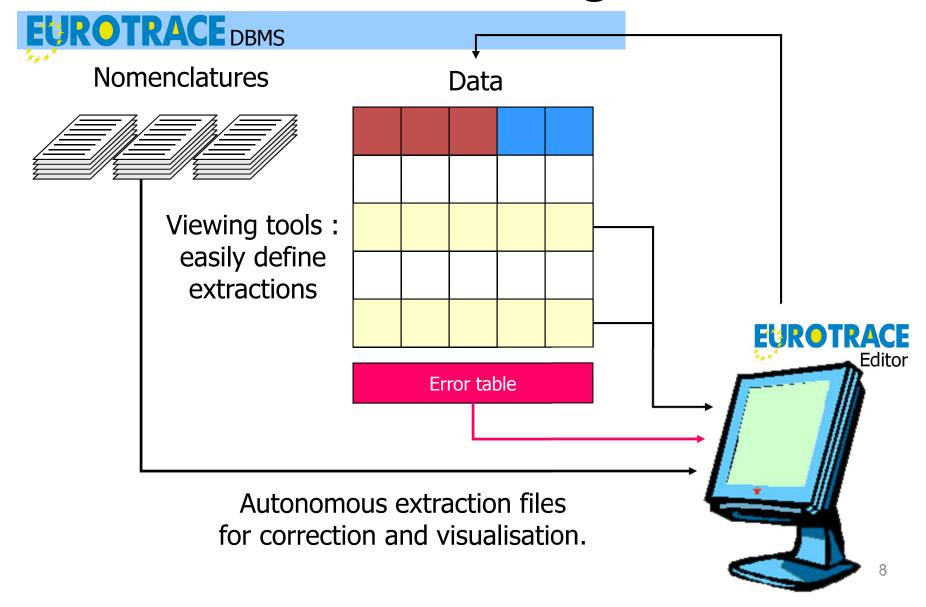

Flexible storage design

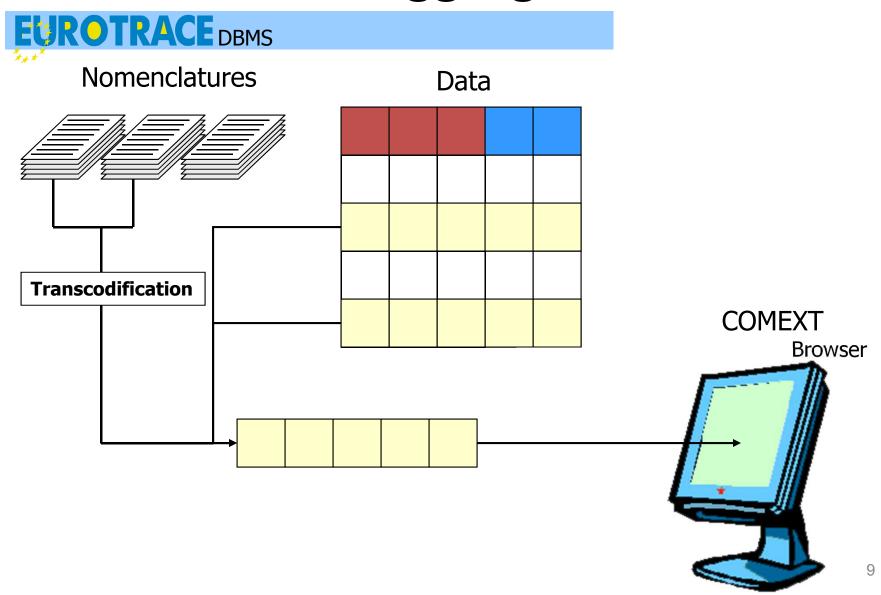

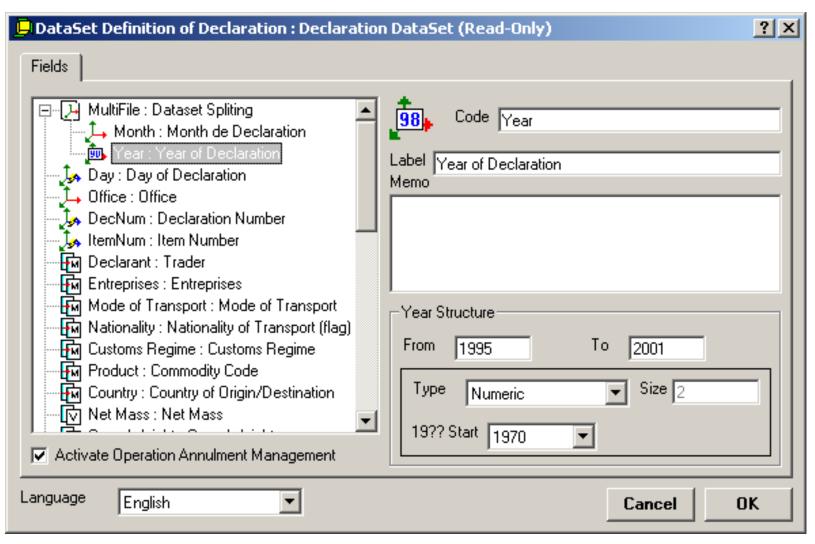

Data Editing

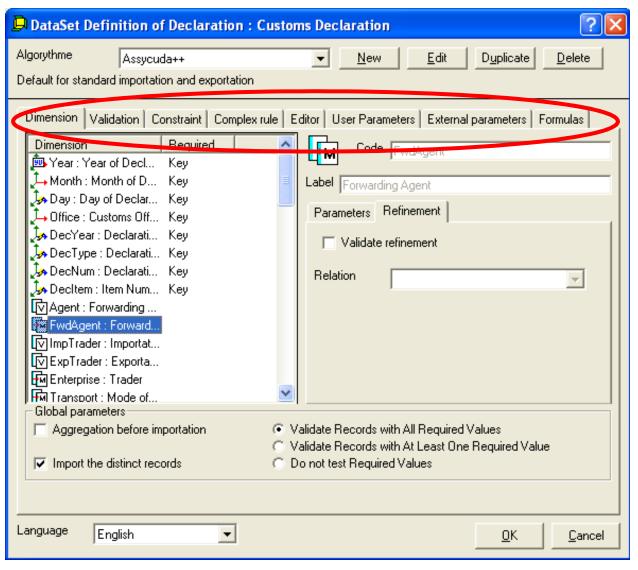

Data Aggregation

Screenshot – data design

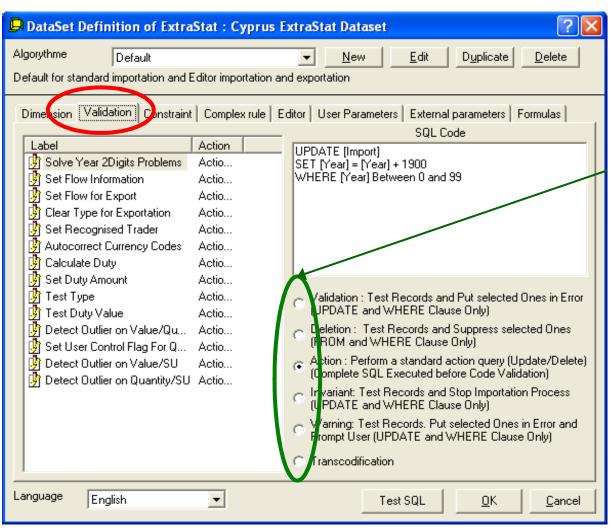

Screenshot – data validation

Together all the parameters in the different
Tabs constitute an algorithm capable of Making a wide variety of validations and actions

More on data validation

- 6 types of rules supported:
- ✓ Validation
- ✓ Action
- ✓ Deletion
- ✓ Invariant
- ✓ Warning
- ✓ Transcodification

But, W.A.I.T

- EUROTRACE is not data dissemination system
- Fortunately There are alternatives software that work in conjuction with EUROTRACE:
 - PC: Comext (Eurostat)
 - Web: WebComext (Eurostat), PX-Web (Statistics Sweden)
- Countries have been implementing these data disseminations system

Eurotrace User Community

- In February 2016, UNSD, Eurostat, African Union, CARICOM, COMESA, ECOWAS and other interested parties decided to form EUROTRACE User Community (EUROTRACE-UC).
- The main goals of this user community are as follows:
 - To identify common issues and agree on setting the priority on features for improvement and addition
 - To maintain list of issues including the status of resolution
 - To fulfill the needs of training and capacity building in countries by pooling available resources

Latest development

- 2016 global assessment on EUROTRACE (April 2016)
- Compilation of common issues and features for improvement (January 2016) replaced by Trello Eurotrace user Community

Useful Links

- Trello Eurotrace user Community
- **EUROTRACE** at Eurostat site
- Eurotrace Interest Group hosted by Eurostat (to be replaced by EUROTRACE User Community)
- EUROTRACE e-learning by COMESA
- Information about EUROTRACE (deprecated as of 2012, but contains useful information)

Example: ideas for improvement

17. Please rank Eurotrace/COMEXT modules that you would like to have or to improve?

	Low priority	Medium priority	High priority	N/A
External Trade Indices (available as add-ins)	0	0	0	0
SDMX-IMTS Data Extraction	0		0	0
Trade and Business Register Integration	0	0	0	0
Bilateral Trade Asymmetries Analysis	0	0	0	0
Data Visualization	0	0	0	0
Web Comext Data Dissemination (available as part of Eurotrace package)	0	0	0	0
Using open source database (e.g., postgreSQL)	0	0	0	0

Eurotrace Editor (available as part of Eurotrace package)	0	0		0
Detection of outliers (e.g., unit values) (available in Eurotrace Windows)	0	0	0	0
Bridge between Eurotrace and PX-Web	0	\circ	0	\circ
Data confidentiality	0	0	0	0
Estimation and imputation of missing data (e.g., quantities)		0	0	0
Flat file data extraction (available in version 3.3.7)	0	0	0	0
Integration between COMEXT and Excel (as Excel add-ins)	0			
Compatibility with the latest MS Office formats (XLSX, accdb, etc.)	0	0	0	0

Thank you
