

CEPII Trade Data : the *BACI* and *TUV* databases

Charlotte EMLINGER

UN Comtrade Data Fair
September 25th

- French research center in **international economics**
 - analyses on the **world economy** and its evolution
 - produces studies, **research, databases**
 - for academics, private and public decision-makers, international institutions, economists, civil society, the media
- Need of **accurate, comprehensive and disaggregated** trade statistics
 - **UNSD Comtrade** and **Tariff Line** databases as sources
 - Construction of two databases : **BACI** (trade values and quantities) and **TUV** (trade unit values)
 - Issues of discrepancies in trade's declarations and missing quantities
 - Developed for internal use but accessible for external users

1. The BACI database: The issues of declarations in UN Comtrade

UN Comtrade information for the trade flow
from i to j of the product $hs6$ the year t

1. The BACI database: The issues of declarations in UN Comtrade

UN Comtrade information for the trade flow
from i to j of the product $hs6$ the year t

Issue 1 : missing information

- some countries do not report at all (up to 170 reporting countries, 245 partners)
 - some countries do not report some goods (confidentiality, product aggregation...)
- ➔ only 43% of flows with **double declarations** (83% of world trade value)

1. The BACI database: The issues of declarations in UN Comtrade

UN Comtrade information for the trade flow
from i to j of the product $hs6$ the year t

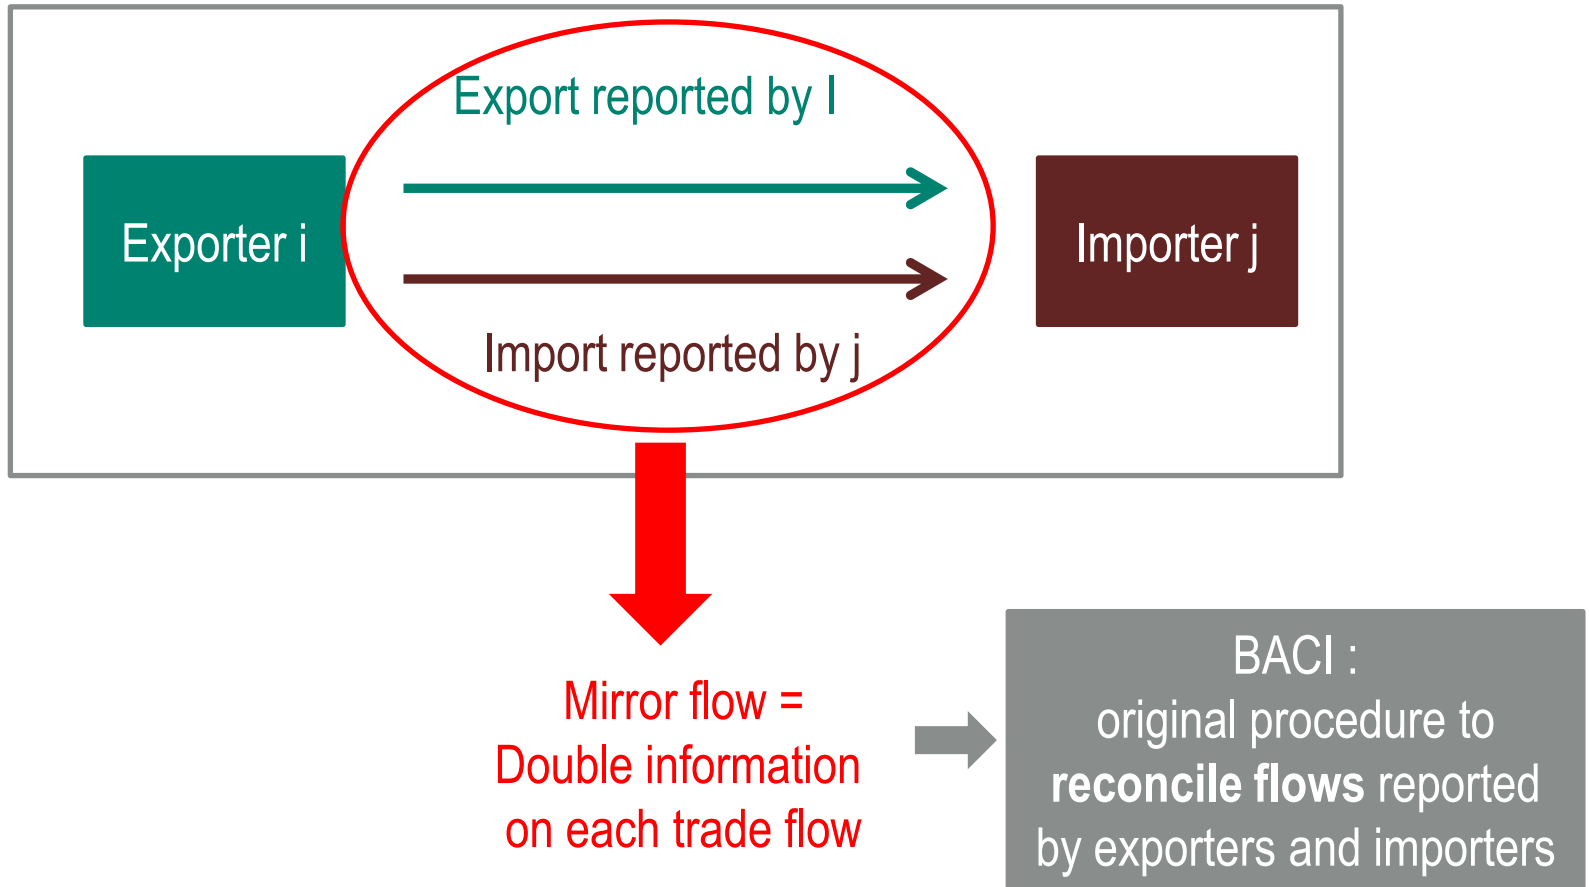

Issue 2 : Differences in reporting of trade values and quantities

(Difficulties in the identification of the actual trading partner, confidentiality, different reporting year, product misclassification...)

1. The BACI database: Comprehensive and reconciled trade values

UN Comtrade information for the trade flow
from i to j of the product $hs6$ the year t

BACI Methodology

1. Estimation of **CIF/FOB ratio** using a gravity-type equation to compute FOB import values
2. Evaluation of the **reliability of each country's reporting** (indicator of the reporting distance among partners, cleaned from geographical and sectoral specialization)
3. **Reconciliation of bilateral trade flows** reported twice, using reliability index as weights

→ BACI : FOB bilateral trade values and quantities

- Large coverage of countries
- More reliable data
- Yearly update
- Available for subscribers to the UN Comtrade database

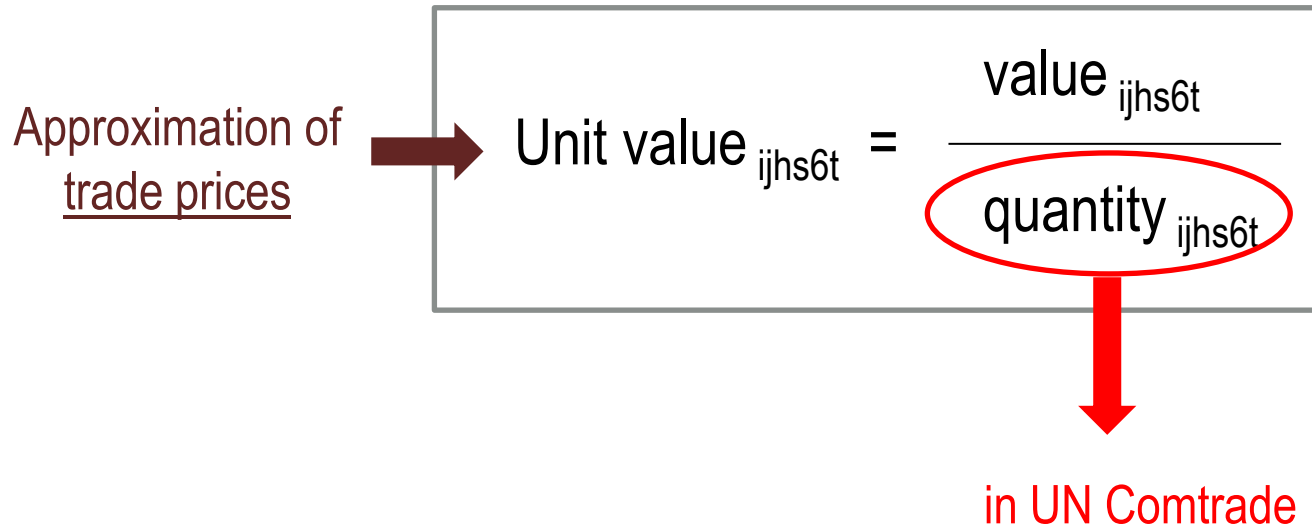

2. The Trade Unit Values database: Missing quantities treatment in Comtrade

Approximation of
trade prices

$$\text{Unit value}_{ijhs6t} = \frac{\text{value}_{ijhs6t}}{\text{quantity}_{ijhs6t}}$$

2. The Trade Unit Values database: Missing quantities treatment in Comtrade

Computation of missing quantities using values and standard unit values (defined at the world level) to improve the coverage of the database

→ Reduce the dispersion of unit values and their reliability

2. The Trade Unit Values database: Missing quantities treatment in Comtrade

$$\text{Unit value}_{ij\text{TL}t} = \frac{\text{value}_{ij\text{TL}t}}{\text{quantity}_{ij\text{TL}t}} \rightarrow \text{Unit value}_{ij\text{HS6}t}$$

Trade Unit Values Database

- Use **raw tariff line data** to compute unit values at the highest level of disaggregation
- Only consider **reported quantities**

2. The Trade Unit Values database: Missing quantities treatment in Comtrade

$$\text{Unit value}_{ij\text{TL}t} = \frac{\text{value}_{ij\text{TL}t}}{\text{quantity}_{ij\text{TL}t}} \rightarrow \text{Unit value}_{ij\text{hs6}t}$$

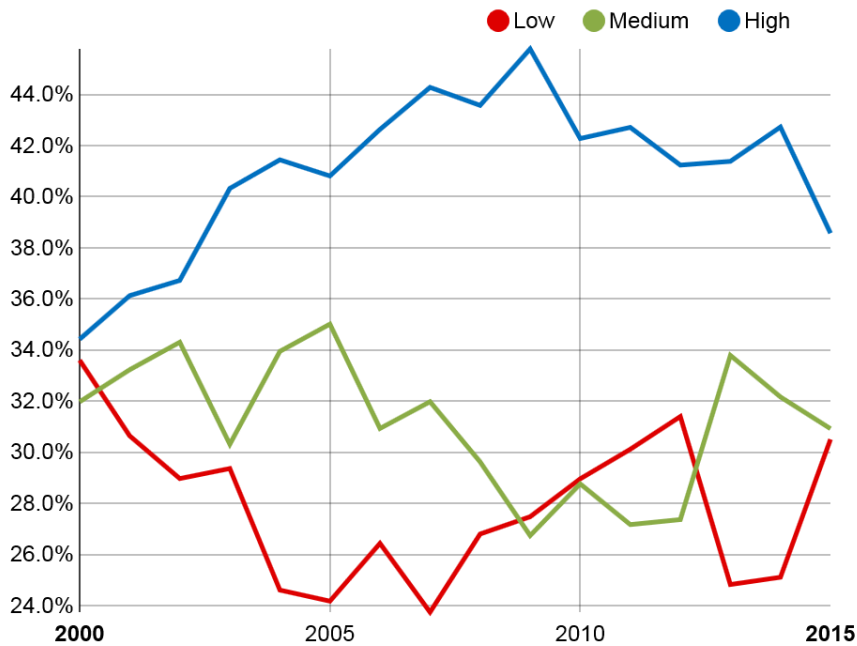

→ TUV : CIF and FOB bilateral trade unit values

- More reliable data, with higher dispersion
- Yearly update
- 200 countries, more than 5000 products (HS6-digit)
- Free, available on CEPII website

- BACI and TUV are used for other CEPII's products
- **The Trade Flow Characterization (TFC) database**
 - Decomposition of trade flows into trade types (trade in differentiated or similar product) and price ranges (low, middle, high range)
- **Country profiles**
 - Interactive data of income level, comparative advantages, product quality range, trade protection ... based on CEPII databases
 - Friendly-user illustrations and downloadable data

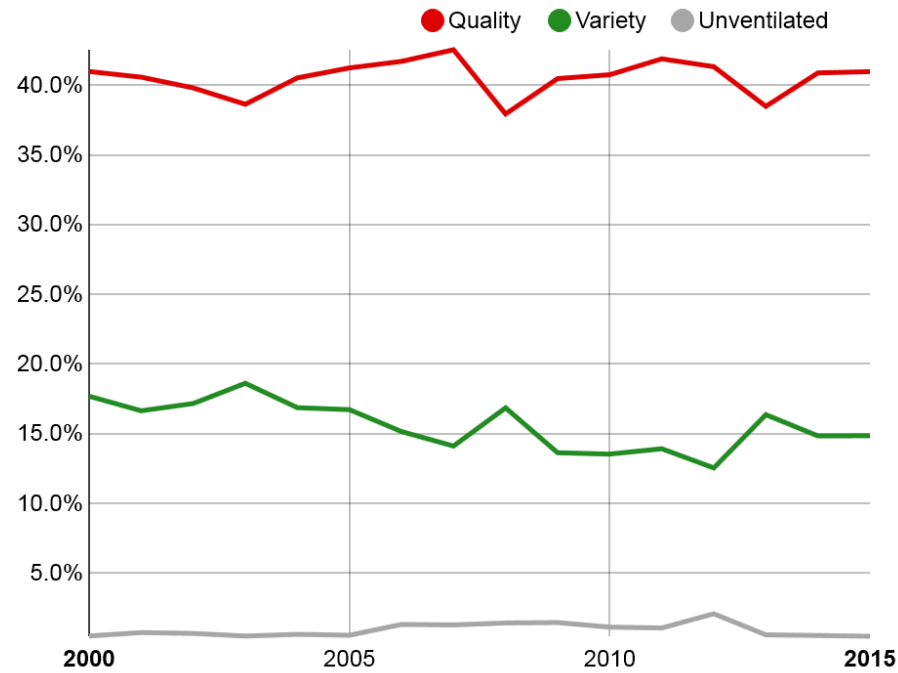

3. Trade Flows characterization and country profiles

France - 7.A. Exports
