

Thailand's Digital Economy Policy and Statistics

Beijing, China, 15-17 November 2018

Sakulkarn Khankhaeng

Economic Statistics Division, NSO, Thailand

Thanomsin Chakreeves

Office of the National Digital Economy and
Society Commission (ONDE), Thailand

Outline of Presentation

Dynamic Context in the Digital Ages

Thailand Digital Economy Policy Direction

Thailand National Statistical System

Data sources related to digital economy

- ICT Statistics
- e-Transaction Statistics
- ICT Infrastructures Statistics

Use of data for competitiveness

Challenges in measuring the Digital Economy

Way forward

Dynamic Context in the Digital Ages

Challenges posed by Digital Technology Dynamics

- Exponential growth of technological changes
- Convergence of online and offline activities
- Tendency to use digital technology for production rather than consumption
- Competition on the basis of innovation
- Increasing prevalence of smart everything
- Data-driven competition
- Proliferation of cyberthreats
- Change in workforce structure

Shifting from ICT to Digitalize Economy and Society

Digitalize Economy and Society

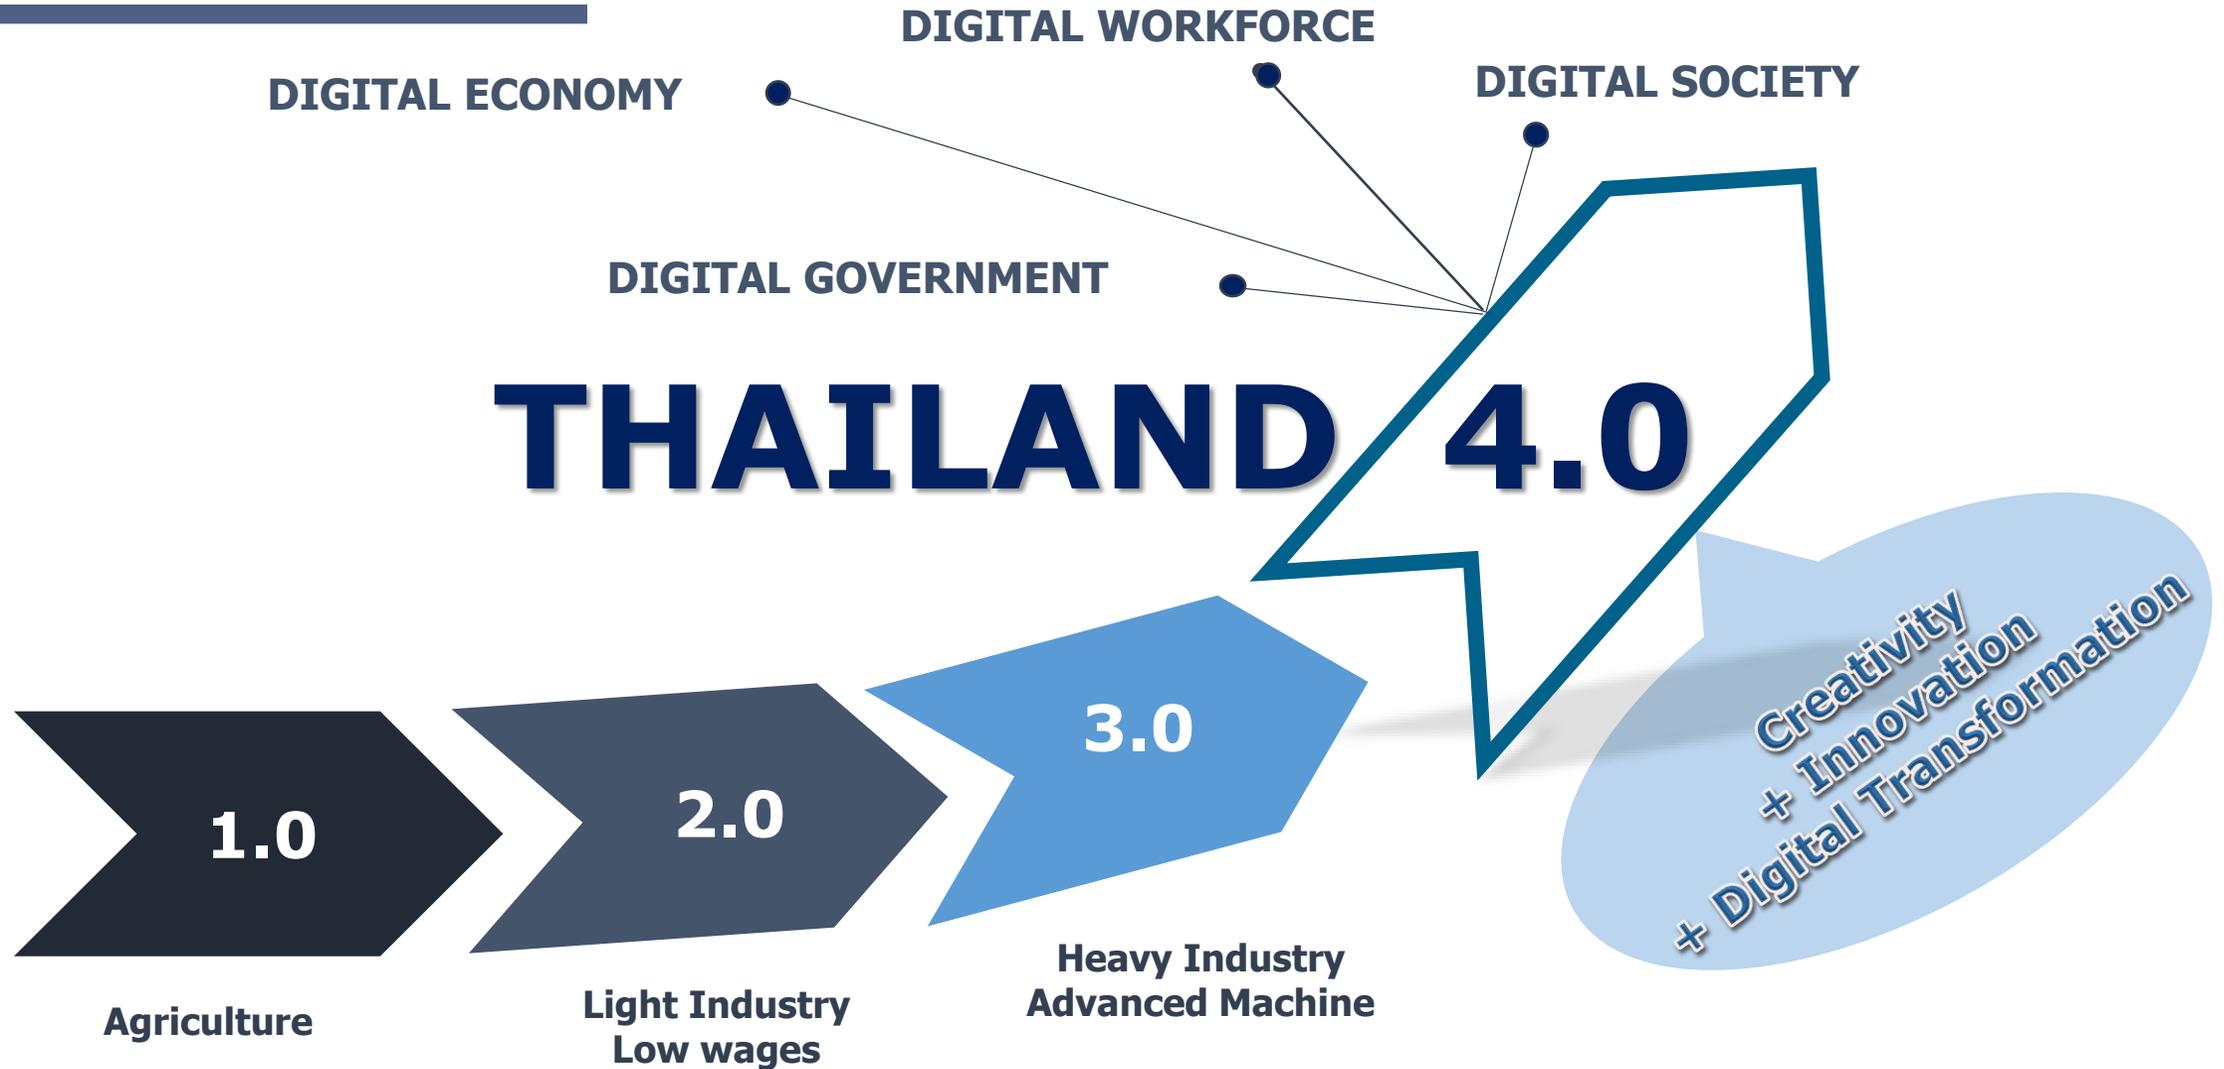

ICT/Digital Technology

Thailand Digital Economy Policy Direction

Thailand 4.0 Model

Transform towards Digital Thailand

“

Digital Thailand refers to the country's brilliance in taking full and creative advantage of digital technology to develop infrastructure, innovation, data capability, human capital, and other resources, thus propelling the country's economic and social development towards stability, prosperity, and sustainability.

”

Digital Thailand Strategy

Digital Law and Standard
Cybersecurity

Digital Manpower
Digital Literacy

Government Transformation

Digital Infrastructure

Smart City

Digital SMEs

Digital Manufacturing

Digital Agriculture

Digital Services

Digital Technology And Content Industry

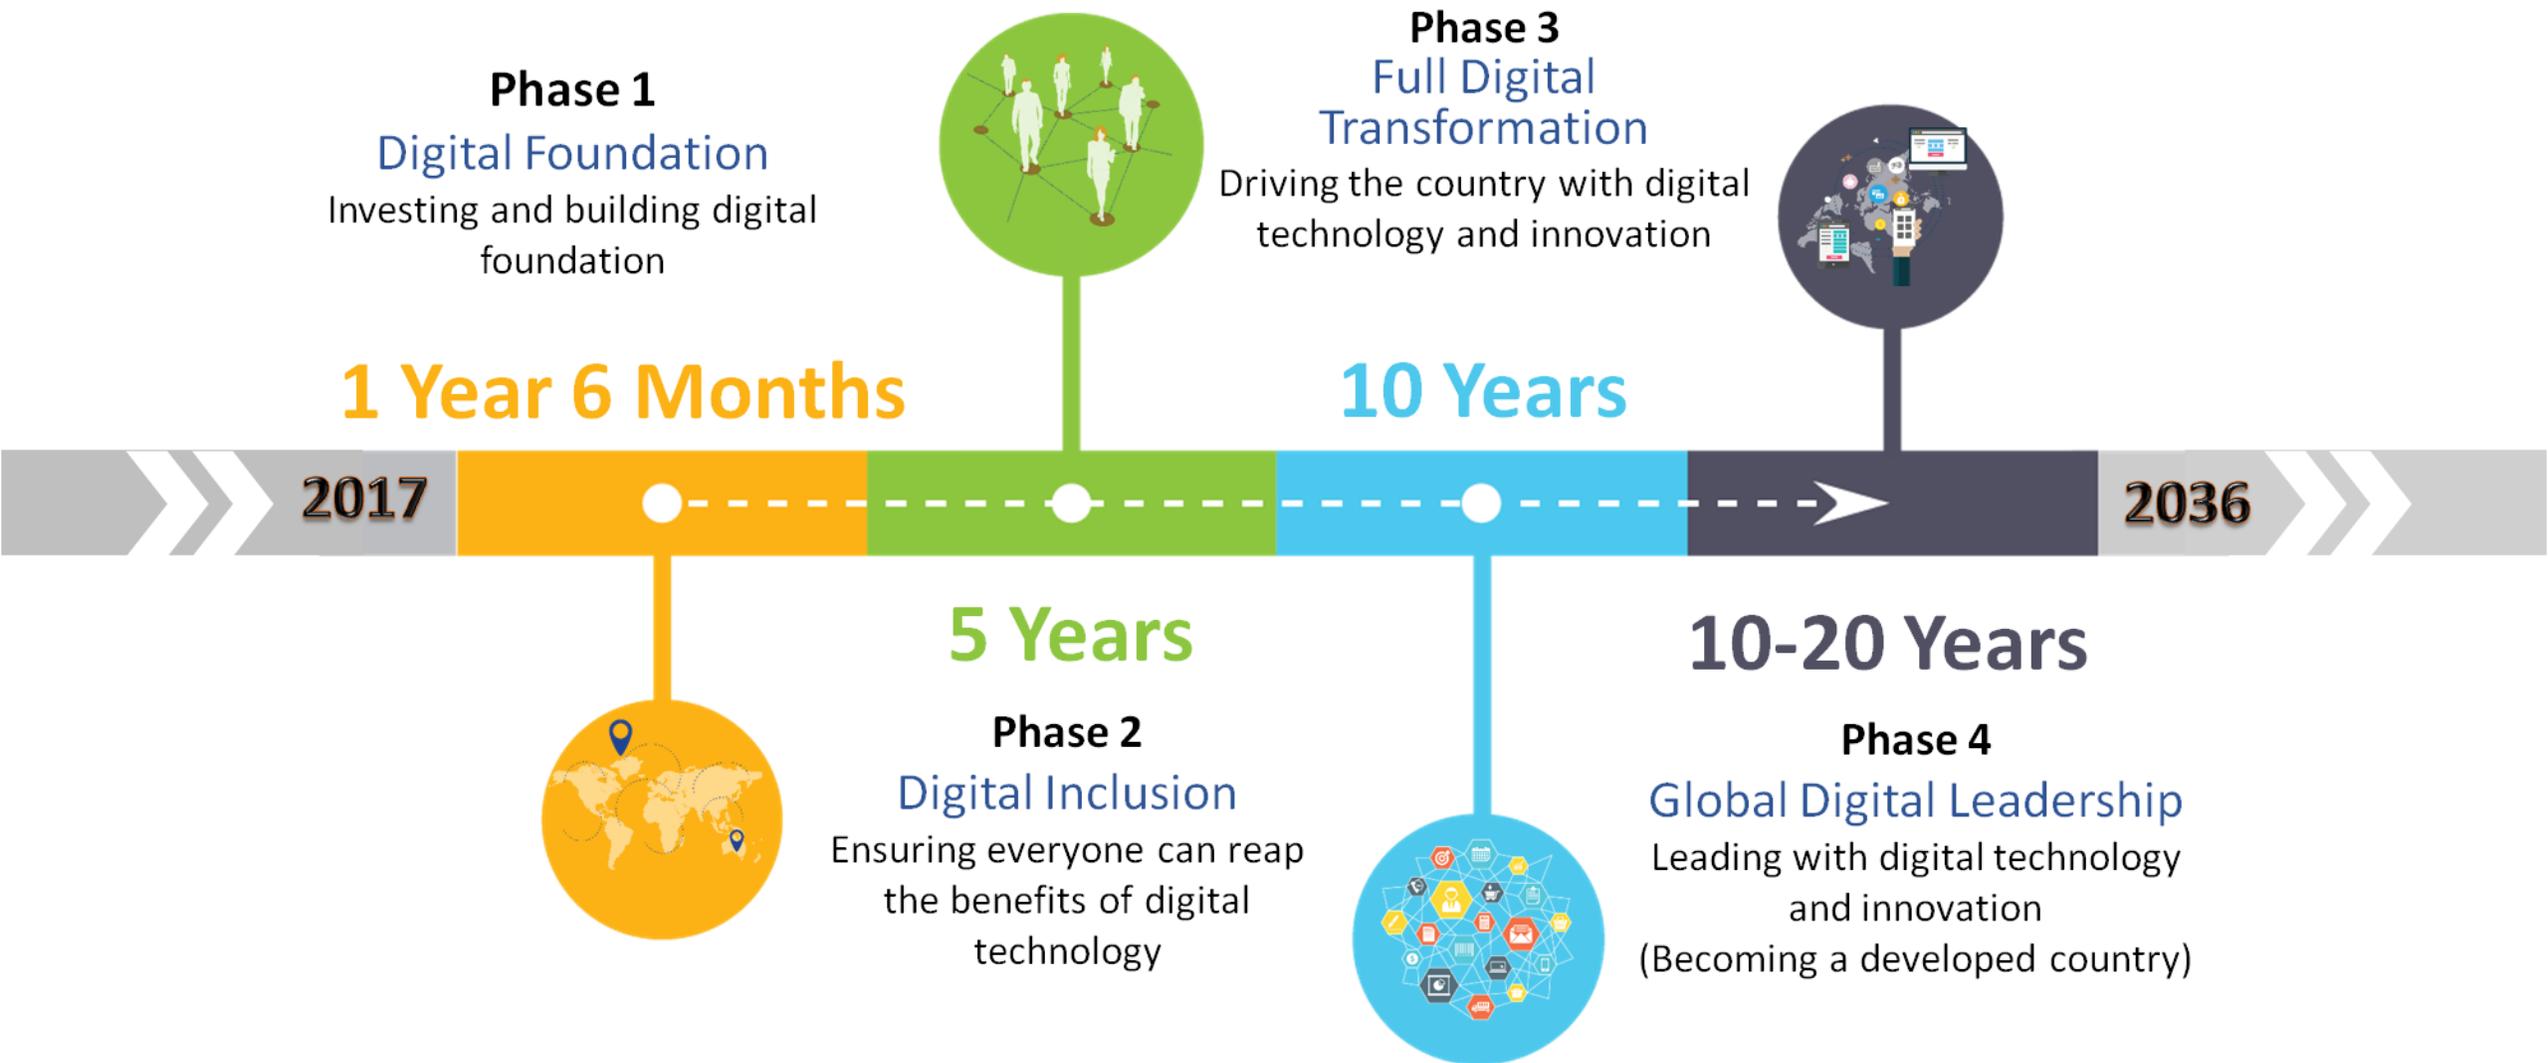

Digital Community

Digital Learning and Knowledge

Digital Health

Digital Thailand 20 Years Landscape

Digital Thailand Goals

Goal 1

Raising the Country Competitiveness with Innovation

Goal 2

Creating Equal Opportunity with Information and Digital Service

Goal 3

Develop Human Capital in the Digital Era

Goal 4

Revolutionizing government Operation for better transparency and effectiveness

Digital Thailand Key Indicators

1 Competitiveness

- Thailand will be placed in the top 15 of the World Competitiveness Scoreboard
- Digital sector will contribute at least 25% of the country's GDP

2 Equal Opportunity

- Every citizen must have access to broadband as a public utility
- Thailand will be placed in the top 40 of the ITU ICT Development Index (IDI)

3 Human Capital

- Every citizen will be digitally literate

4 Government Operation

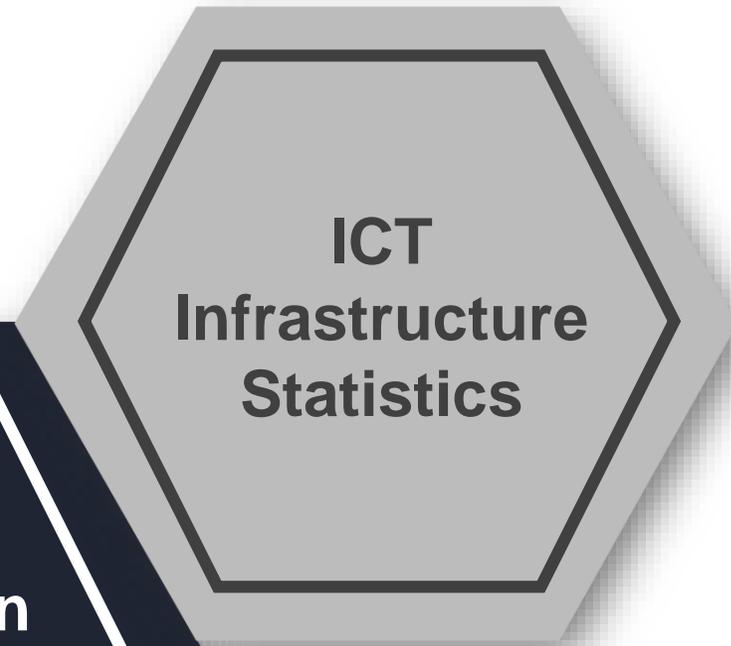

- Thailand will be ranked in the top 50 of the UN e-Government Development Index

Thailand National Statistical System (NSS)

Data sources related to digital economy

Data availability

ICT Statistics

Highlight of national surveys which provide key competitiveness indicators and SDG indicators

- The Household Survey on the use of ICT: HS-ICT
- The Establishment Survey on the use of ICT: ES-ICT

ICT Statistics

01

The Household Survey on the use of ICT : HS-ICT

Conceptual Framework:

HS-ICT adopt the international Standard according to manual for measuring ICT access and use by Households and Individuals by ITU

Survey Coverage:

Private Household in all Provinces (77 provinces) both in Municipal and Non-municipal area

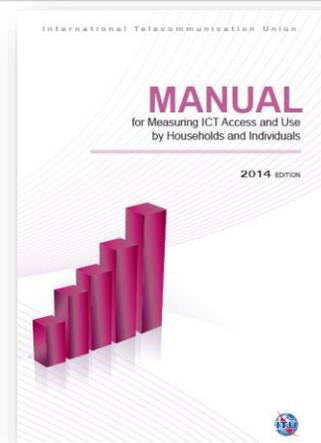

Frequency : Annually

Sample size : 83,880 HH samples (Data collected by Interviewing head of HH and all members aged 6 years and above)

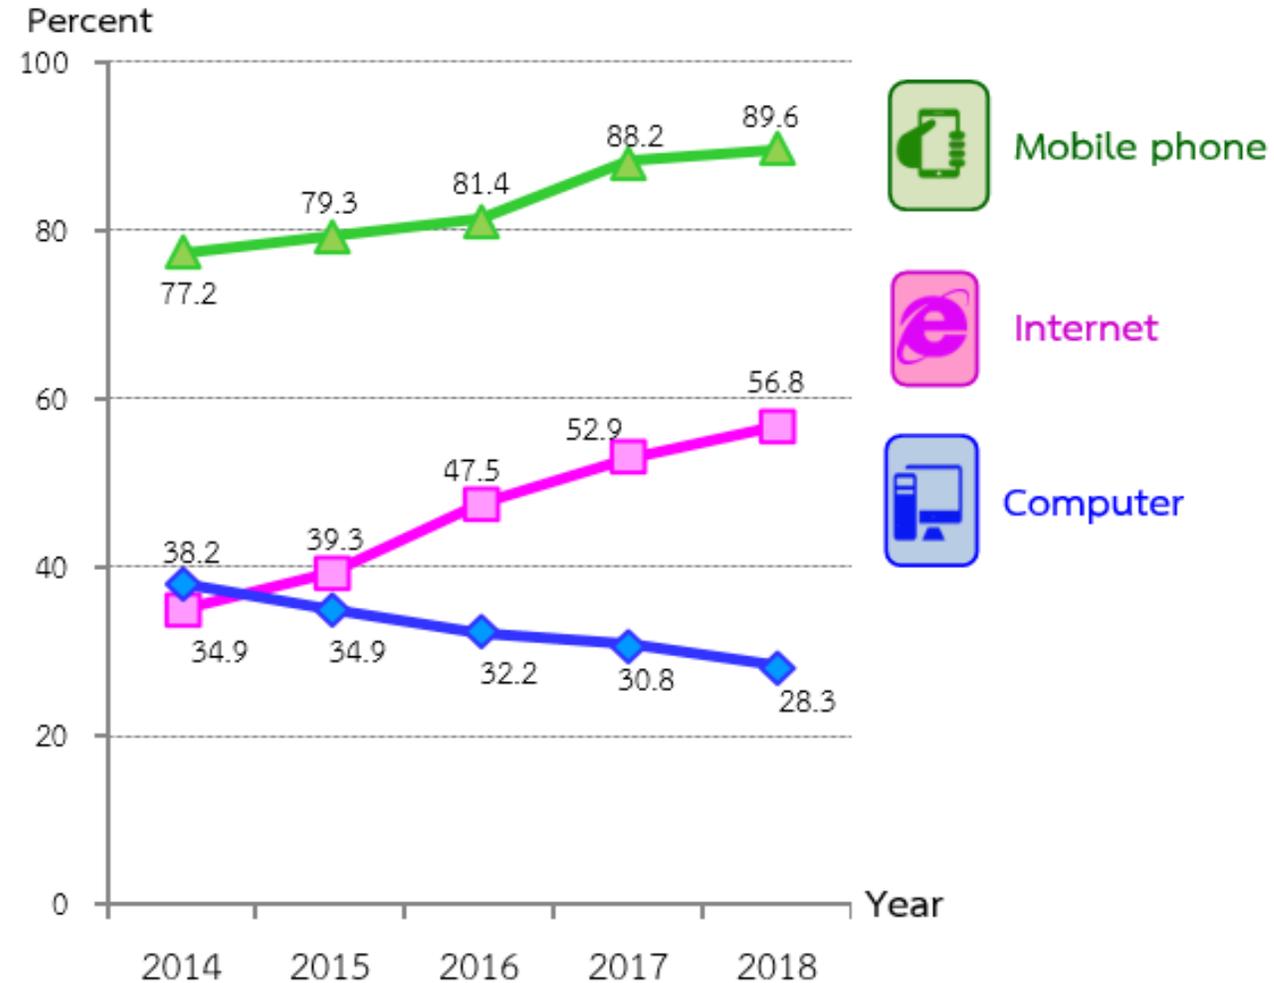

Data collection: Face to Face interviews (Using Tablet)

Data Items:

- Computer usage
- Internet usage
- Mobile phone usage
- ICT usage in household
- ICT equipment to watch TV program in household

Percentage of population aged 6 years and over who used information and communication technology in 2014-2018

Source: The 2017 Households Survey on the use of ICT, NSO

ICT Statistics

02

The Establishment Survey on the use of ICT : ES-ICT

Conceptual Framework:

ES-ICT adopt the international Standard according to UNCTAD manual

Survey Coverage:

All establishments engaged in economic activity, Classified in accordance with the TSIC 2009 (Base on ISIC rev.4) as follows: Trade and Services, Manufacturing, Construction, ICT activities, Private Hospital activities

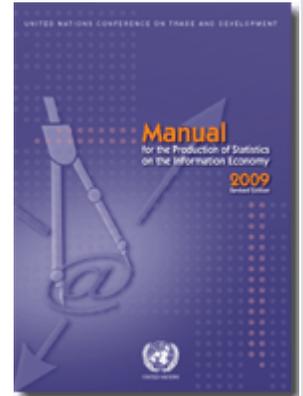

Frequency : Annually

Sample size : Around 35,000 establishments

Data collection: Face to Face interviews (the paper-based questionnaire)

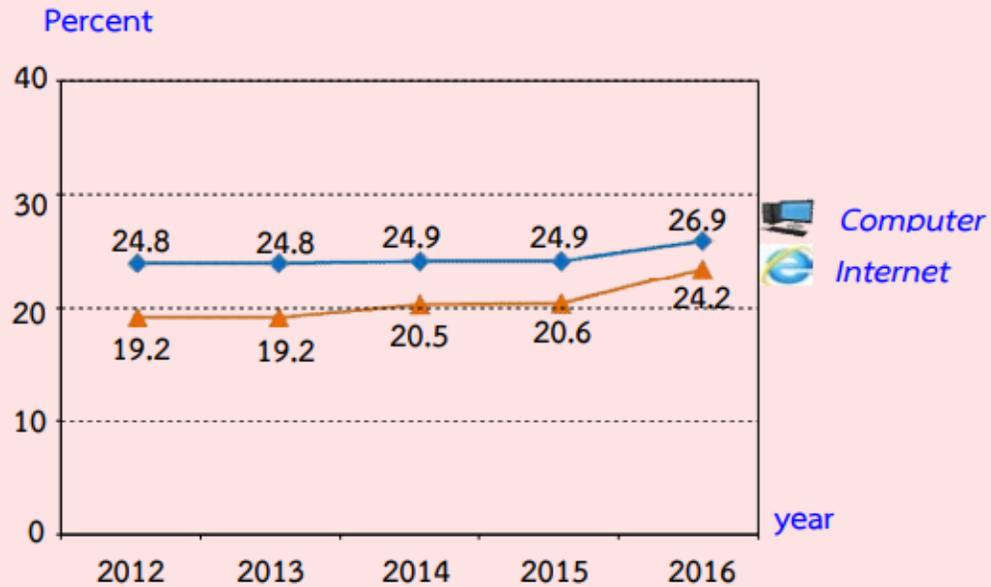

Data Items:

- Use of computers for business in the establishment
- Use of internet for business in the establishment
- Use of websites for business in the establishment
- Placing/receiving order for goods or services via the internet (purchasing/selling)
- Making/receiving a payment via the internet
- Expenditure on ICT usage
- ICT personnel in the establishment

Percentage of Establishments Using Computers and Internet in 2012 - 2016

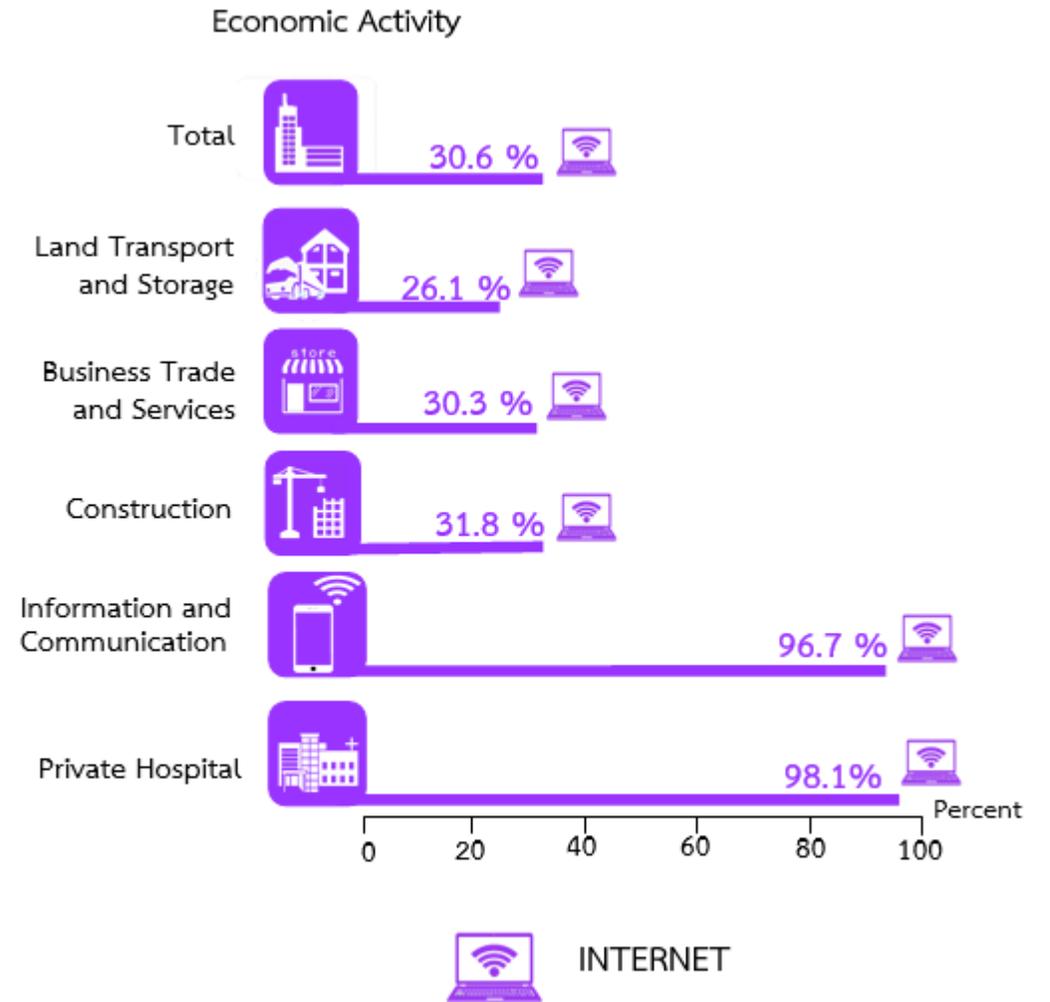

Figure 1 Percentage of Establishments Using Computer and Internet in 2012 - 2016

Note : Computers including tablets in 2016.

Source: The 2016 Establishments Survey on the use of ICT, NSO

Percentage of Establishments with Using Internet by Economic Activity in 2017

Source: The 2017 Establishments Survey on the use of ICT, NSO

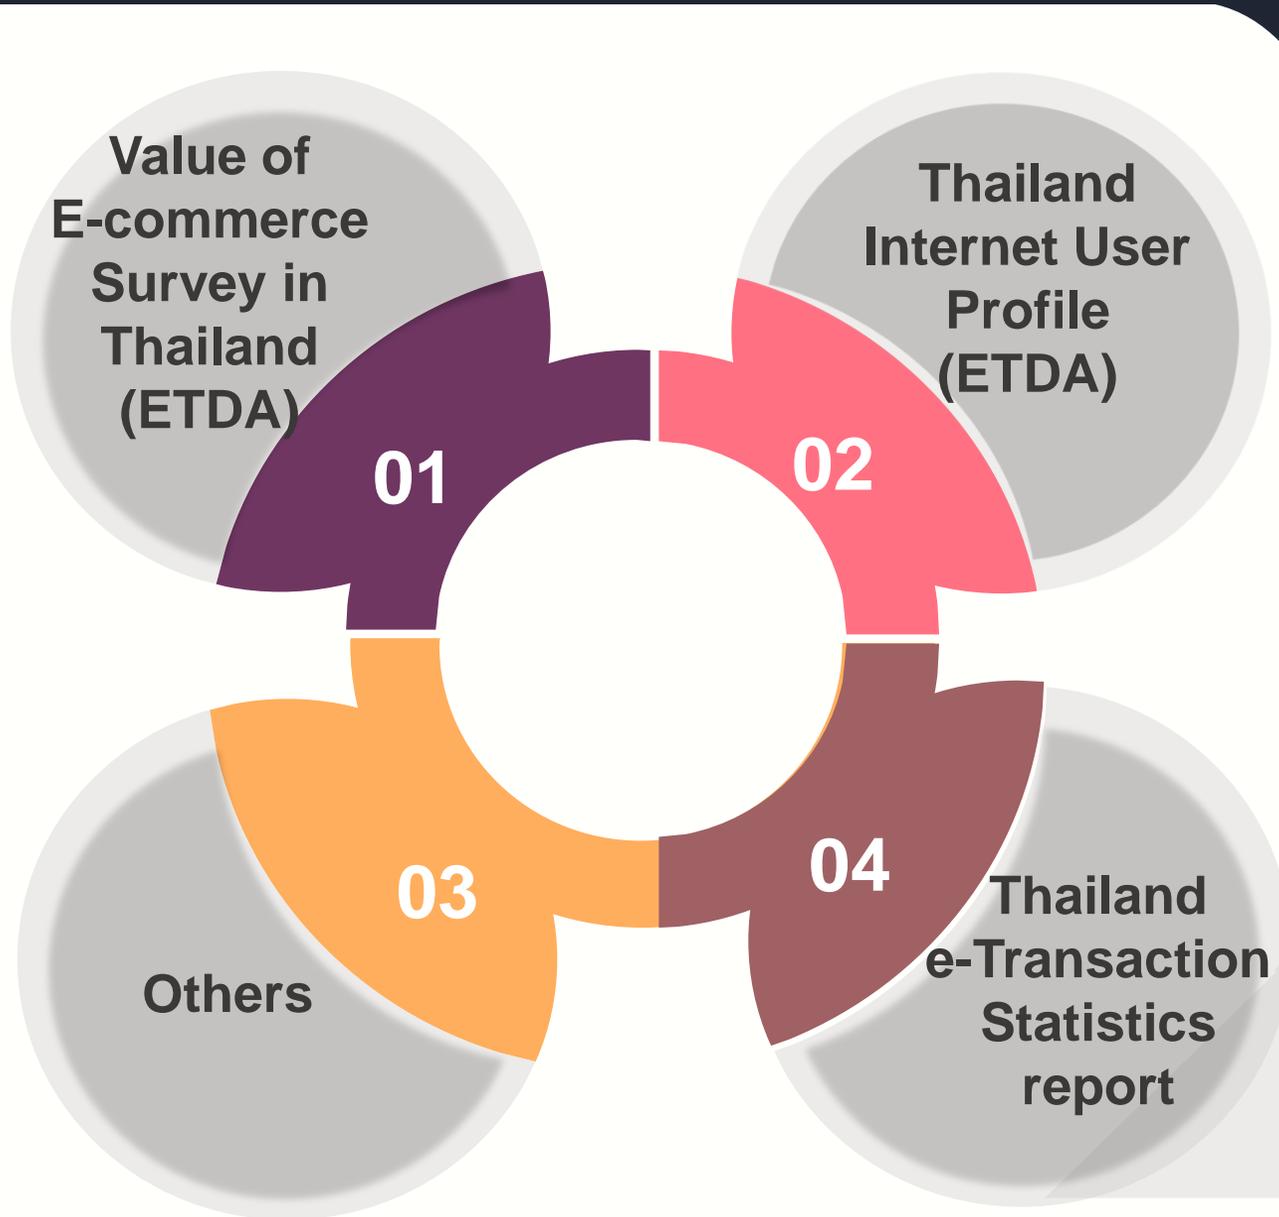

ICT Statistics

03

- **The Digital Content survey (DEPA)**
 - The value of Animation and Gaming Industry
 - The value of Character industry
- **The Software Market survey (DEPA)**
 - The value of Software/Software service
 - The value of Software-enabled service provider
 - The value of Software-using business
 - Software personnel Demand & Supply
- **The Survey of Value of Computer Hardware Market (NSTDA&MDES)**
 - PC, System, Peripheral
- **The Survey of the Value of Thailand's Communications Market (NBCT & NSTDA)**
 - **Communication Equipment**
(Telephone Handset , TelCo Network Equipment , Wireline Equipment)
 - **Communication Service** (Fixed Line Service , Mobile Service , Internet Service)

Note:

- Digital Economy Promotion Agency : DEPA
- Office of the National Broadcasting and Telecommunications Commission :NBCT
- National Science and Technology Development Agency :NSTDA

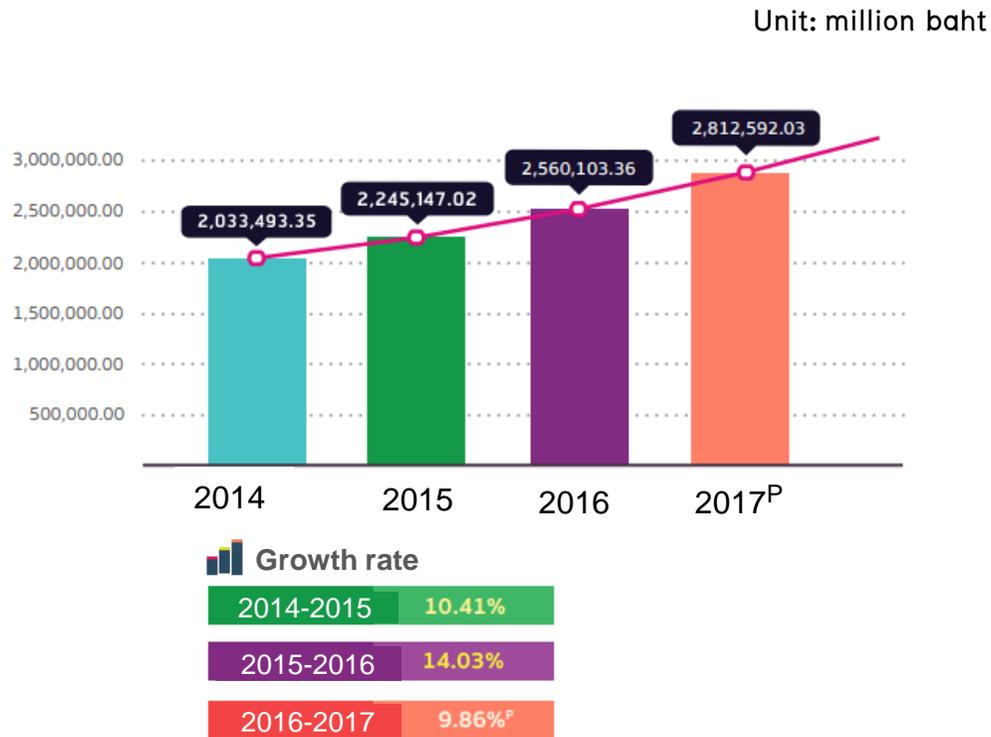

e-Transaction Statistics

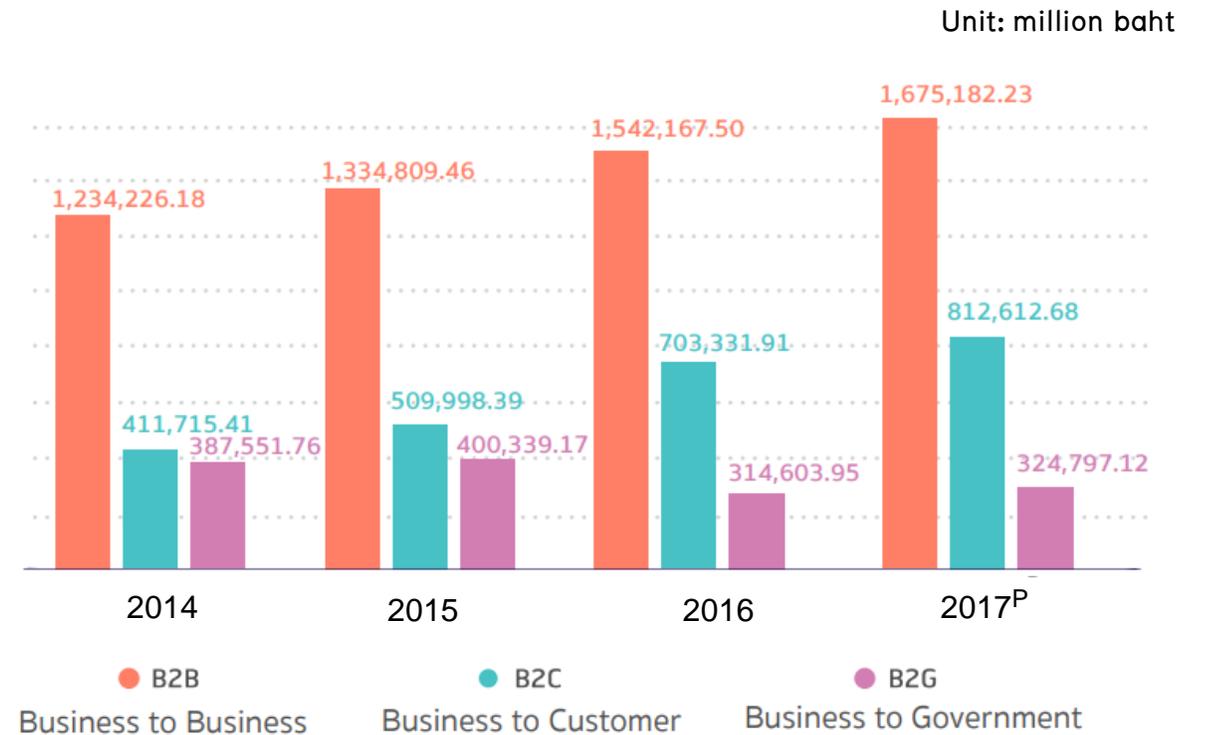

- E-Payment (BOT)
- E-Trading and Services (SET)
- E-Certificate (DBD)
- E-Health (MOPH)
- E-Filing and E-Reporting (RD)
- E-Tax invoice (RD)

01 E-commerce 2014-2017

The value of E-Commerce in Thailand during 2014-2016 and projected value in 2017

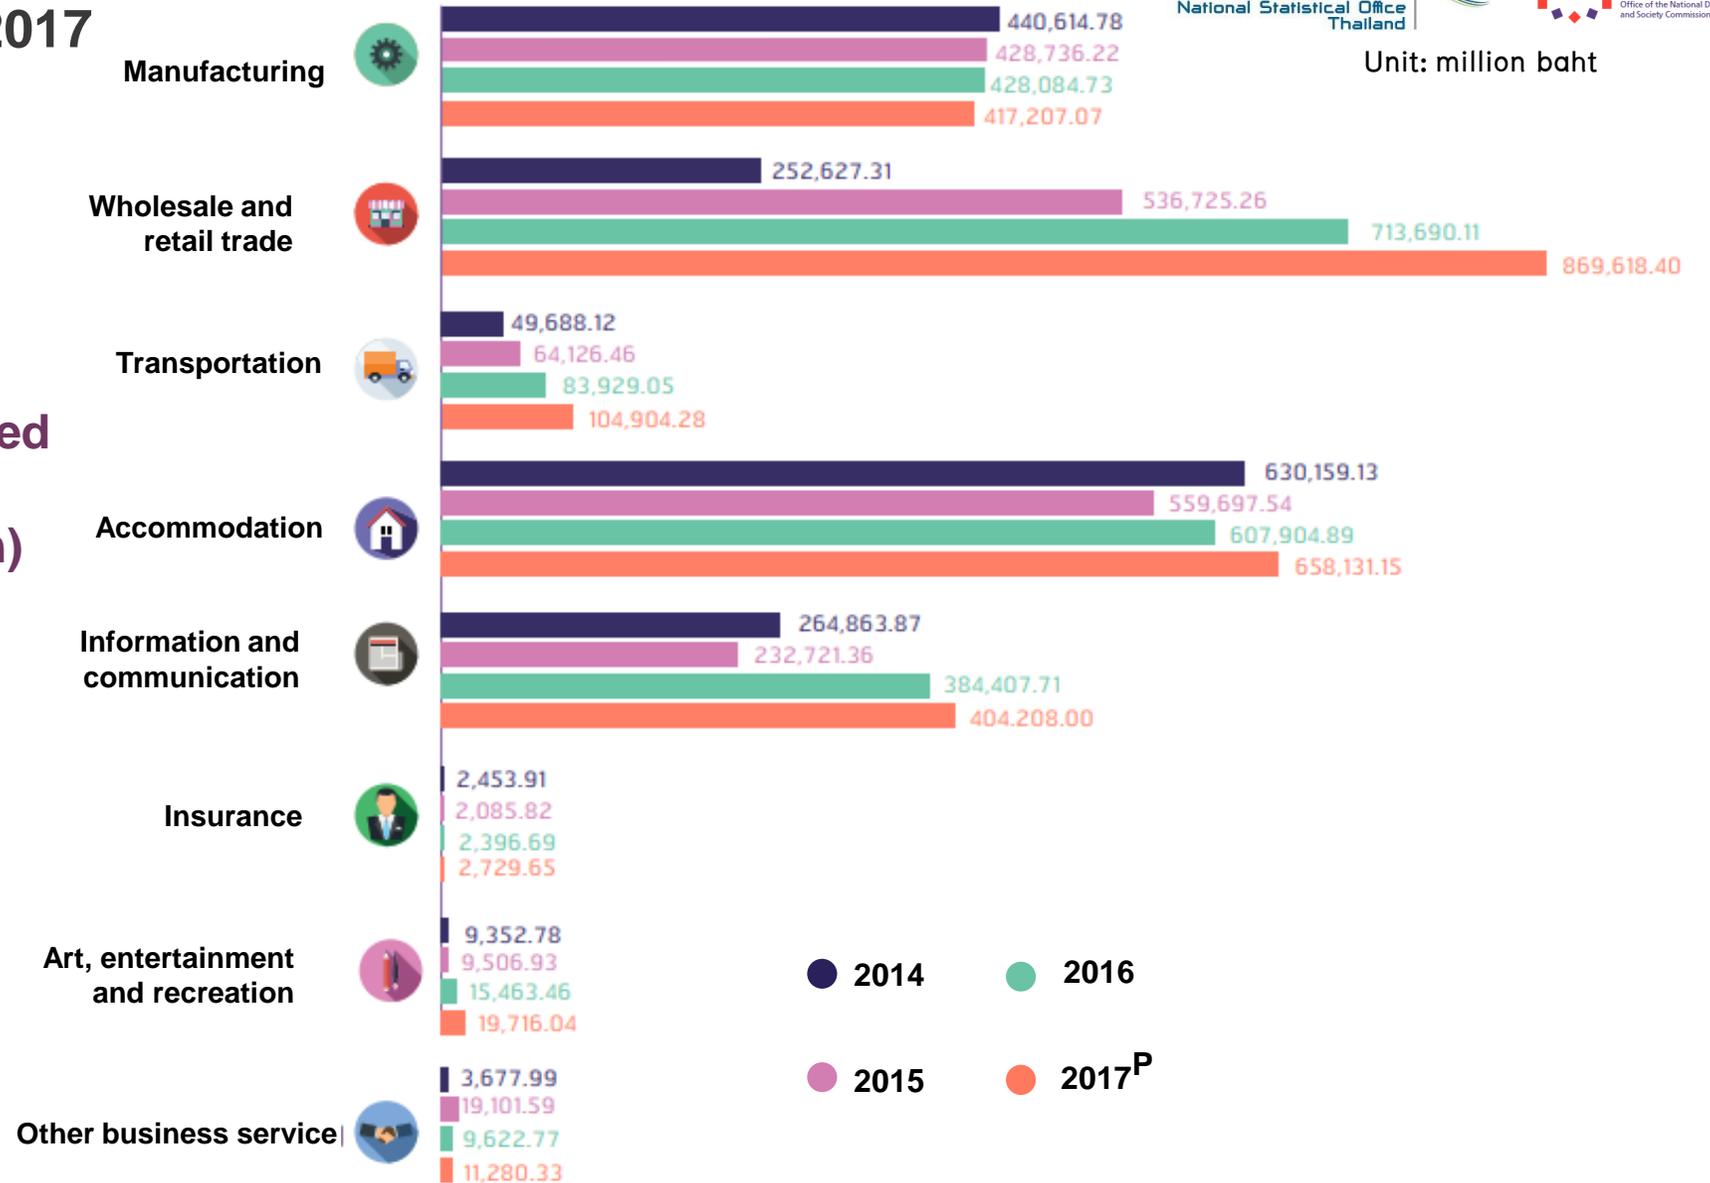

The value of E-Commerce during 2014-2016 and projected value in 2017, according to type of operators (Including e-Auction)

01 E-commerce 2014-2017

Unit: million baht

The value of E-Commerce during 2014-2016 and projected value in 2017, according to industry (excluding e-Auction)

ICT Infrastructure Statistics

Reports & Database

▶ Thai Telecom industry DB

▶ Mobile Market report (CAT TOT DTAC AIS TRUE) mobile revenue, mobile subscribers

▶ Fix Line market (fix line subscribers, fix line penetration per HH/ population)

ICT Infrastructure (Service provider infrastructure)

by Office of the National Broadcasting and Telecommunications commission (NBCT)

1

Telecommunication Infrastructure

a) Telecommunication infrastructure (Fixed Telephone)

- Fixed Line Subscribers
- Fixed Existing Number
- Fixed Line Penetration

b) Telecommunication Infrastructure (Mobile phone)

- Mobile Broadband Internet Subscriptions
- Mobile Broadband Subscribers per 100 Inhabitants
- Mobile telephone costs (IMD)
- Percentage of Population Covered by a Mobile Cellular Telephone Network (ITU)
- Investment Telecommunications (%) (IMD)

2

Internet infrastructure

a) Internet Infrastructure

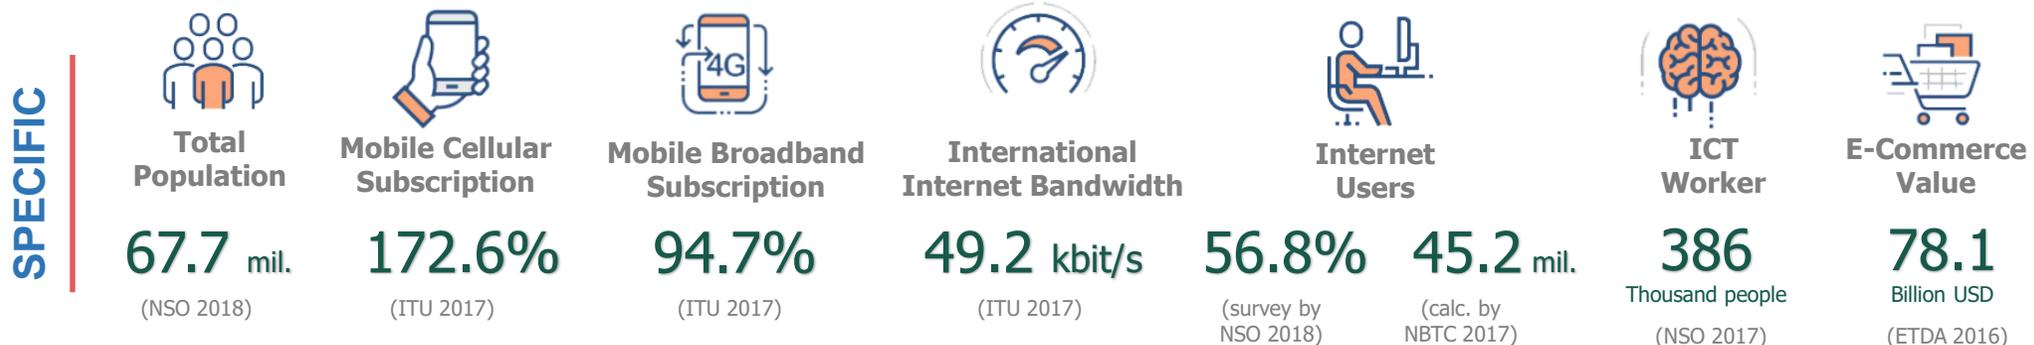

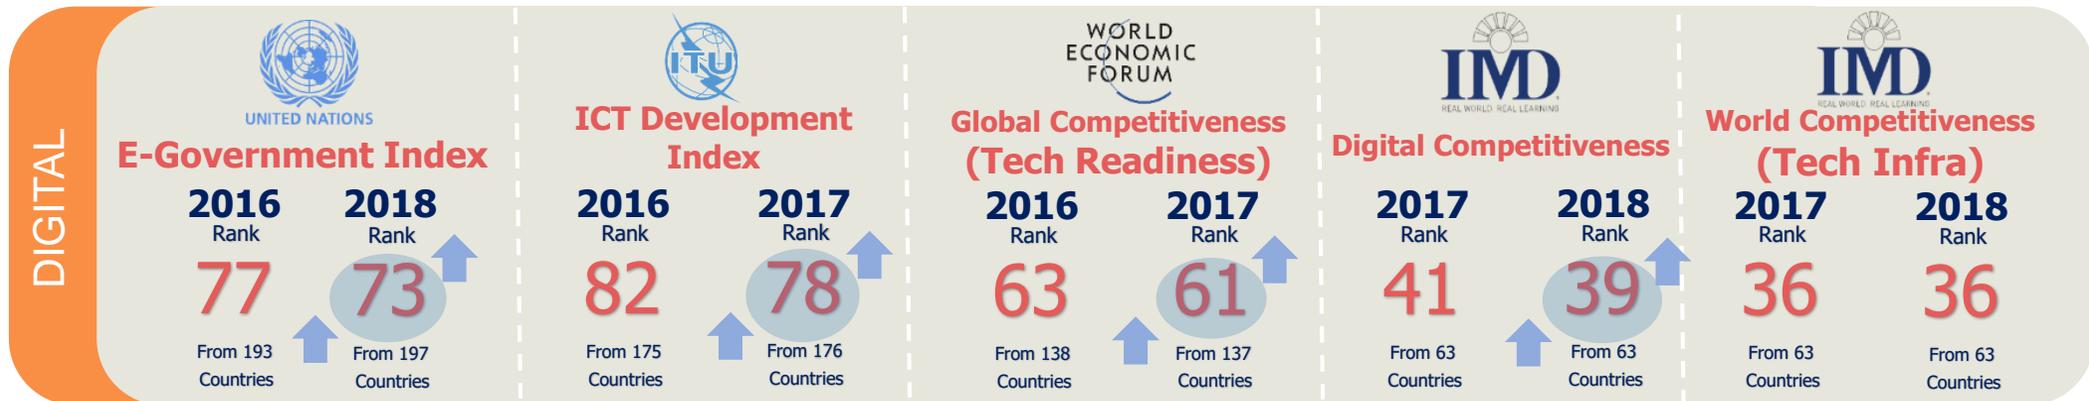

- Internet Bandwidth
- International Bandwidth
- Domestic Bandwidth
- International Internet bandwidth per Internet user (NRI, GCI)
- International Internet bandwidth per inhabitants (ITU) (bits/second/inhabitant)
- Internet bandwidth speed (IMD)
- Number of ICT community Center (MDES)

Use of data for competitiveness

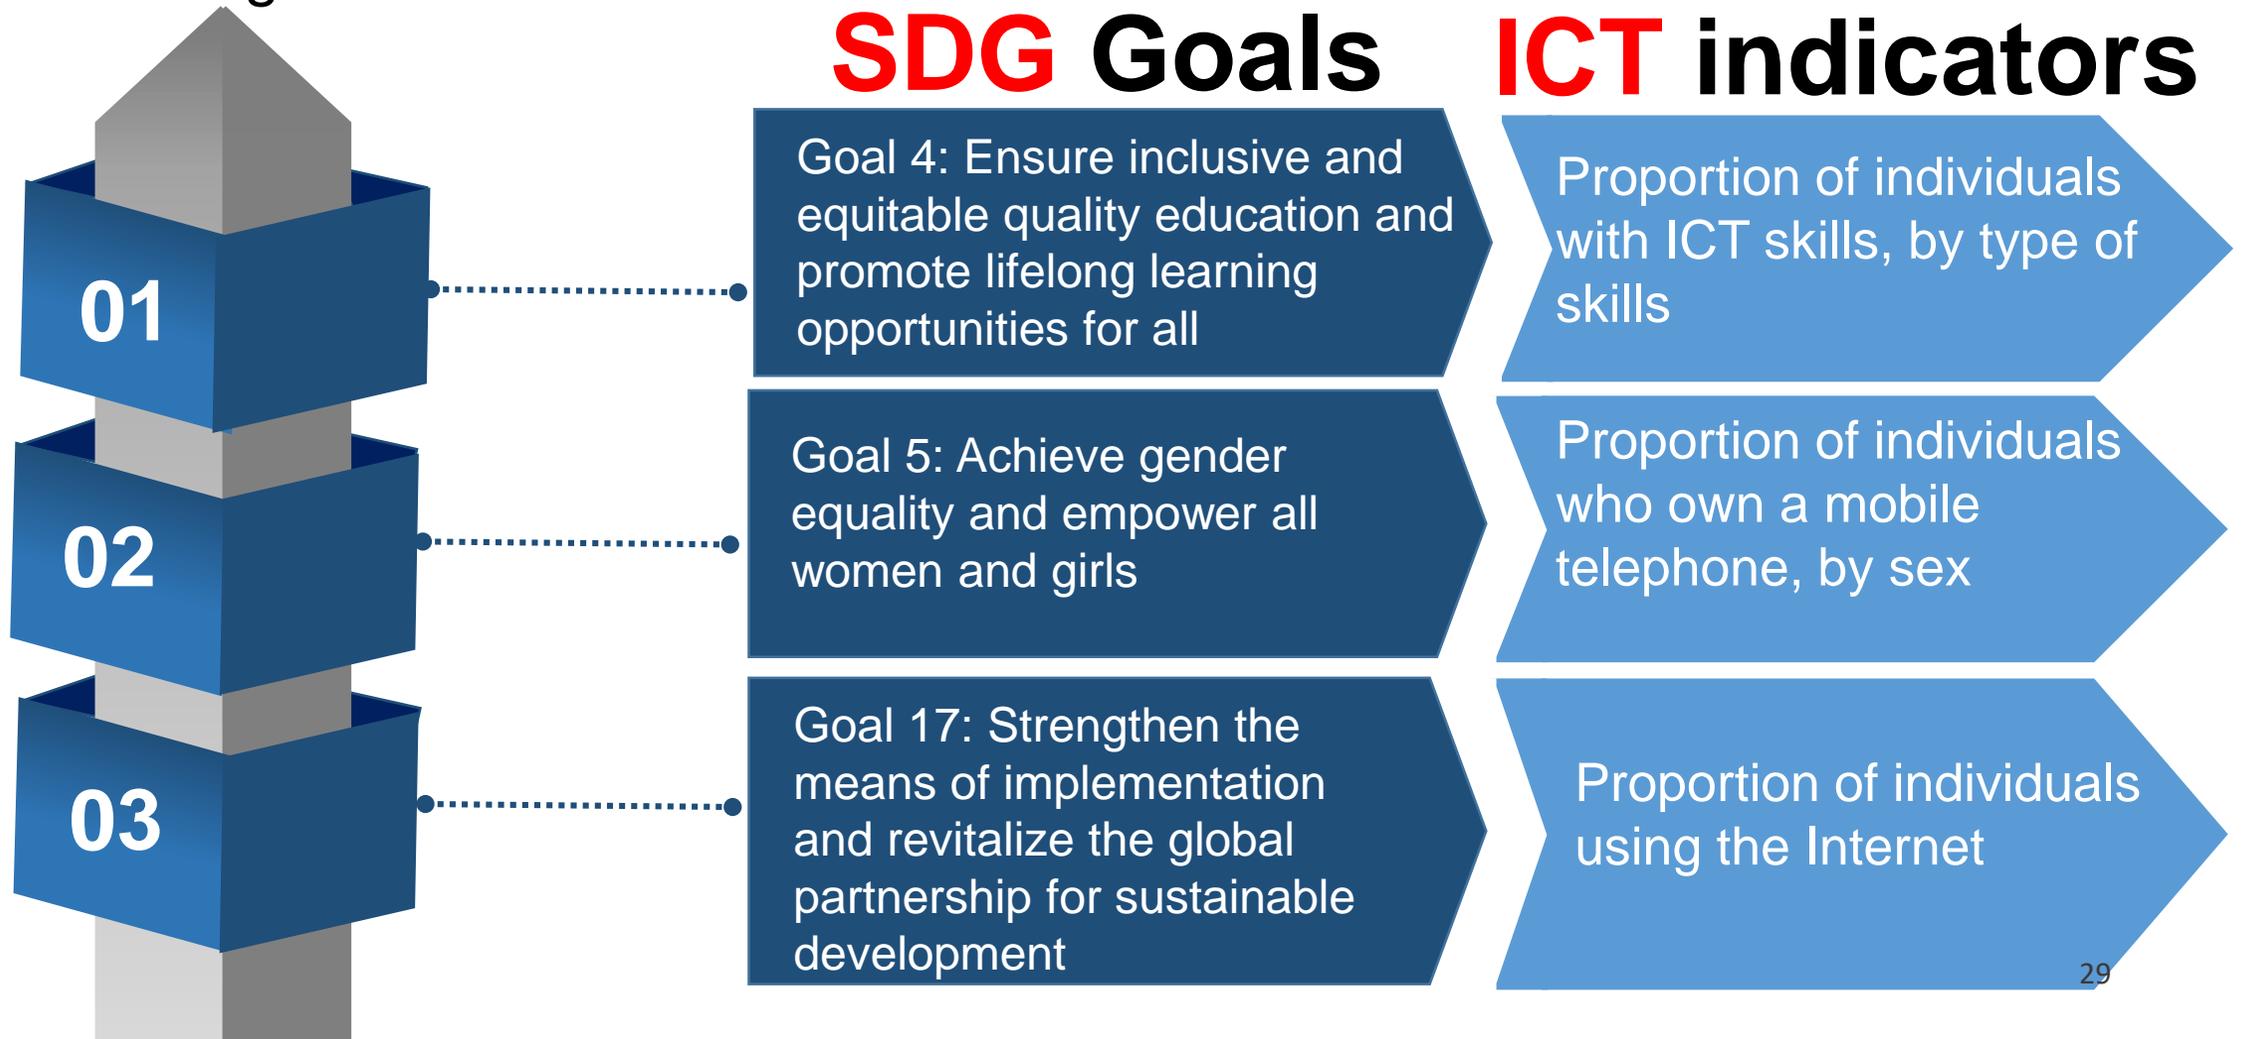

State of Digital Economy

DIGITAL THAILAND STATISTICS 2018

Use of data for competitiveness:

The examples of ICT statistics produced by NSO which provide the indicators for monitoring SDG Goals

The examples of ICT statistics produced by NSO which provide competitiveness indicators

ICT Indicators	
Proportion of households with a radio	ITU
Proportion of households with a television	ITU
Proportion of households with fixed telephone	ITU
Proportion of households with mobile cellular telephone	ITU
Households with a Personal Computer	NRI
Proportion of households with a computer	ITU
Proportion of individuals who used a computer (from any location) in the last 12 months	ITU
Internet users	GCI, NRI
Number of internet users per 1000 people	IMD
Internet users per 100 persons	UN

The examples of ICT statistics produced by NSO which provide competitiveness indicators (Contd.)

ICT Indicators	
Proportion of individuals who used the Internet (from any location) in the last 12 months	ITU
Location of individual use of the Internet in the last 12 months	ITU
Internet activities undertaken by individual in the last 12 months	ITU
Frequency of individual use of the Internet in the last 12 months	ITU
Households with Internet access	NRI
Proportion of households with Internet access	ITU
Proportion of households with access to the Internet by type of access (narrowband fixed broadband mobile broadband)	ITU
etc.	

Challenges in measuring the Digital Economy

Challenges in measuring the Digital Economy:

The issues in census / survey (traditional data sources)

Use of a combination of techniques to collect data:

1. Face to Face Interviews / using Tablet

- Low response rate
- Time consuming
- High cost

2. e-Survey via Web application / Mail questionnaire/ QR code

- Low response rate
- Still need to contact in person

Use of administrative data/ registers:

- Legal obstacle to access some data source
- An issue in data quality
- Still need to verify the administrative data/ registers

Traditional data sources → response burden

Combine with new data sources

Challenges in measuring the Digital Economy:

The issues in the measurement of the digital economy

- **The existent statistical data** (ICT/e-transaction/ICT infrastructure) does not seem to reflect the digitalize economy.
- **Definition and Scope** for the measurement of the digital economy and society are in development.
- **The framework of Digital Economy Satellite Accounts** has been studying and hasn't been finalized.
- New data source especially the unstructured data in the digital world are too large and too complex, **Data scientist are needed** in public sectors.

Way forward

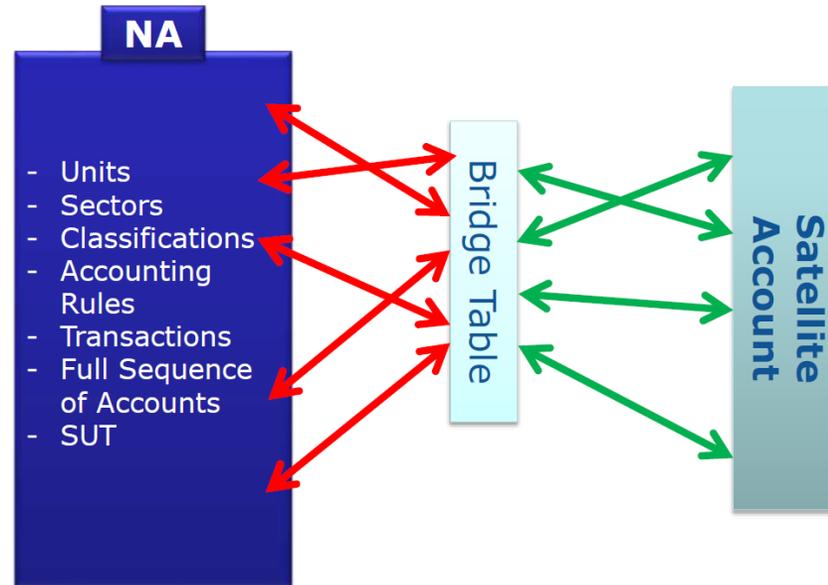

Way forward

Thailand's Digital Economy Satellite Account (DESA-TH)

“

National Accounts

National Accounts are defined as a measure of macroeconomic categories of production, purchase and income activities in a nation.

Satellite Account

A Satellite Account is a term developed by UN to measure the size of economic sectors that are not defined as industries in national accounts.

”

“Methodology and Procedures for establishing Satellite Accounts”
Eurostat 2017

Tourism Satellite Account

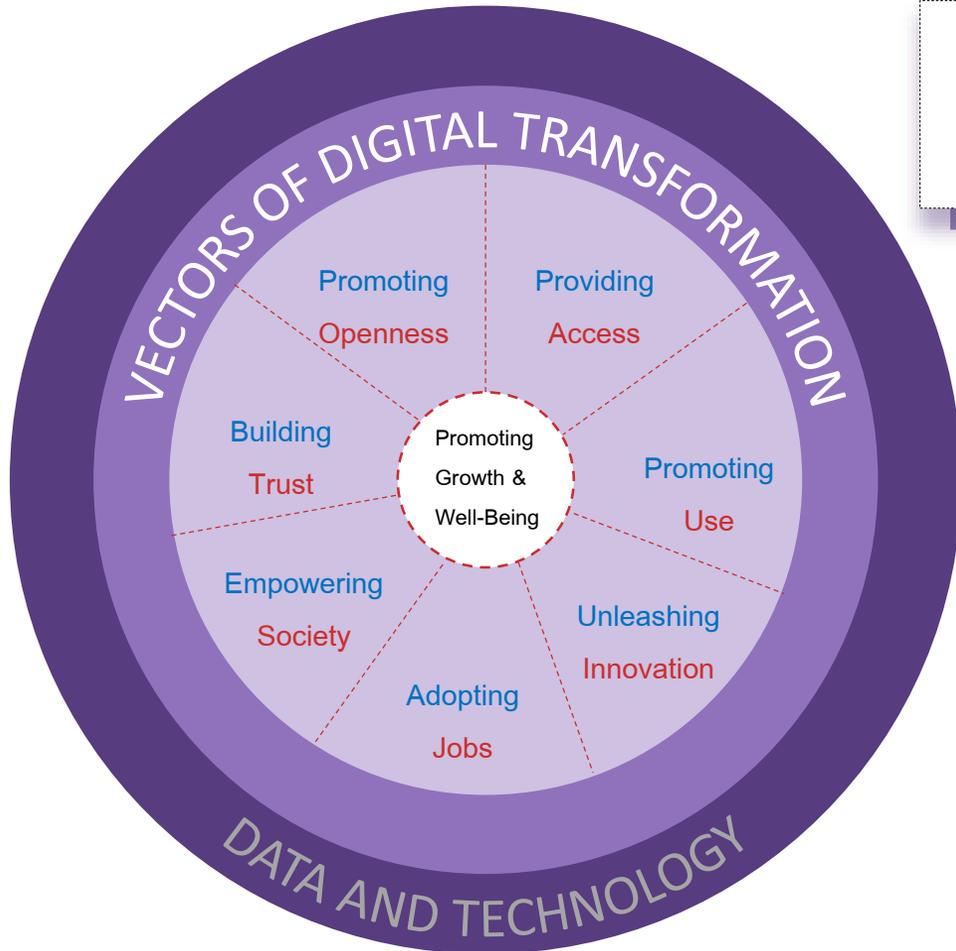

- **UNWTO's Tourism Satellite Account**, The International Recommendations for Tourism Statistics 2008
- Thailand Ministry of Tourism and Sports is continuously developing the **Tourism Satellite Accounts of Thailand**

Digital Economy Satellite Account

OECD proposed framework for a Satellite Account for Measuring the **Digital Economy** : STD/CSSP/WPNA(2017)10

Way forward

Measuring the **Digital Transformation** thematic chapters

In the Context of the Going Digital Policy Framework

OECD & ONDE
Digital Economy Outlook Initiative

OECD's Related
Data Survey
(Outlook + Measuring)

Design methodology and questionnaire to cover all OECD requirement. (Data collected in specific area e.g. Ratchaburi, Etc.)
✓ Raw Data

Data Analytic Tools
(Prototype)

Design a prototype analytic tools.
✓ Data Analytic Tools

OECD's Digital Economy
Outlook 2020

- CDPE Meeting at OECD
- Workshop
- Press conference
- ✓ Cooked Data.

Thank you

謝謝
