

UN Committee of Experts on Business Statistics 23-25 may 2018

Part-V business statistics and
globalization

Merja Rantala, Eurostat

Addressing economic globalization

1) understanding the phenomenon and its impact on our societies and economies, where value added and employment is created

2) Increasing complexity of compiling business and economic statistics

- Multinational enterprise groups: impact on statistics and creating relationships*
- Role of Registers on MNES, EGR, ADIMA, GGR*
- Quality and consistency of national/European statistics: Data and information sharing also cross-borders; European profiling, LCUs,*
- integration of data, domains, sources, coordination globally*
- a degree of standardisation e.g. common classification of business functions*
- Filling data gaps to provide users with a more comprehensive narrative:*
- Global value chains, FDI by ultimate investor, statistics by business functions, Trade in services, services trade by modes of supply, digital trade, Trade by enterprise characteristics*

Thank you for your attention
