The Challenge

Keeping official statistics relevant, timely, and accurate given the changing global economy and the rapidly evolving needs of customers

Rising health-care costs are eating away at your wages and you may not even realize it

Published: Oct 10, 2018 2:04 p.m. ET

The rising price of health care in the U.S. costs families thousands of dollars a year in foregone wages, out-of-pocket costs and increased taxes, a new report says

Uber and the False Hopes of the Sharing Economy

BIG CITY

While Uber promotes itself as a way for drivers to earn extra money to fund their dreams, in truth, most drivers in New York City work full time. Justin Lane/EPA, Via Shutterstock

It's not what you know. It's what you *do* with what you know. That's something companies worldwide will be learning—for better or worse—in the coming year when it comes to big data.

- Key mechanisms:
 - Policy makers and appropriators (at the Federal and local level)
 - Federal advisory committees
 - Industry associations
 - Academic communities and forums
 - Public feedback channels
 - Expert panel studies
 - International standards and guidelines

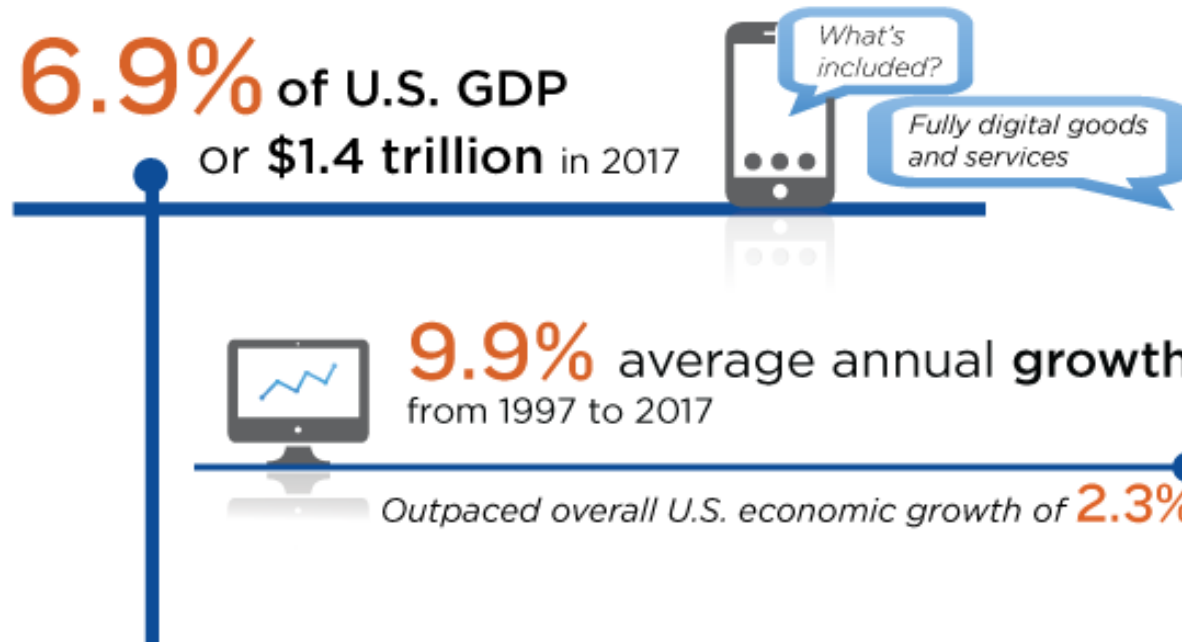

- Multi-dimensional framework for exploration
 - Quality-adjusted prices (smart phones, cloud computing)
 - New digital platforms and business models (ride-sharing apps, advertising-supported digital content)
 - Global IT flows (intellectual property transactions)
- Major challenges
 - Defining the “digital economy”
 - Identifying transactions embedded in accounts but not separately identified

*Paradigm
Shift*

New public-private partnerships for access to non-traditional data

Digital Economy

- New perspective for ongoing policy debate
 - Health care is a growing share of U.S. GDP
 - Consumer spending on medical care by different types of diseases rather than traditional groupings like hospitals and doctors' offices
 - Very strong policy interest and increasing public demand for information on this dynamic sector
- Major challenges
 - Limited information from traditional survey-based data sources
 - Building new framework for examining health care costs

*Paradigm
Shift*

(1) “Blending” non-traditional and traditional data sources and (2) collaboration with the scientific community

Health Care

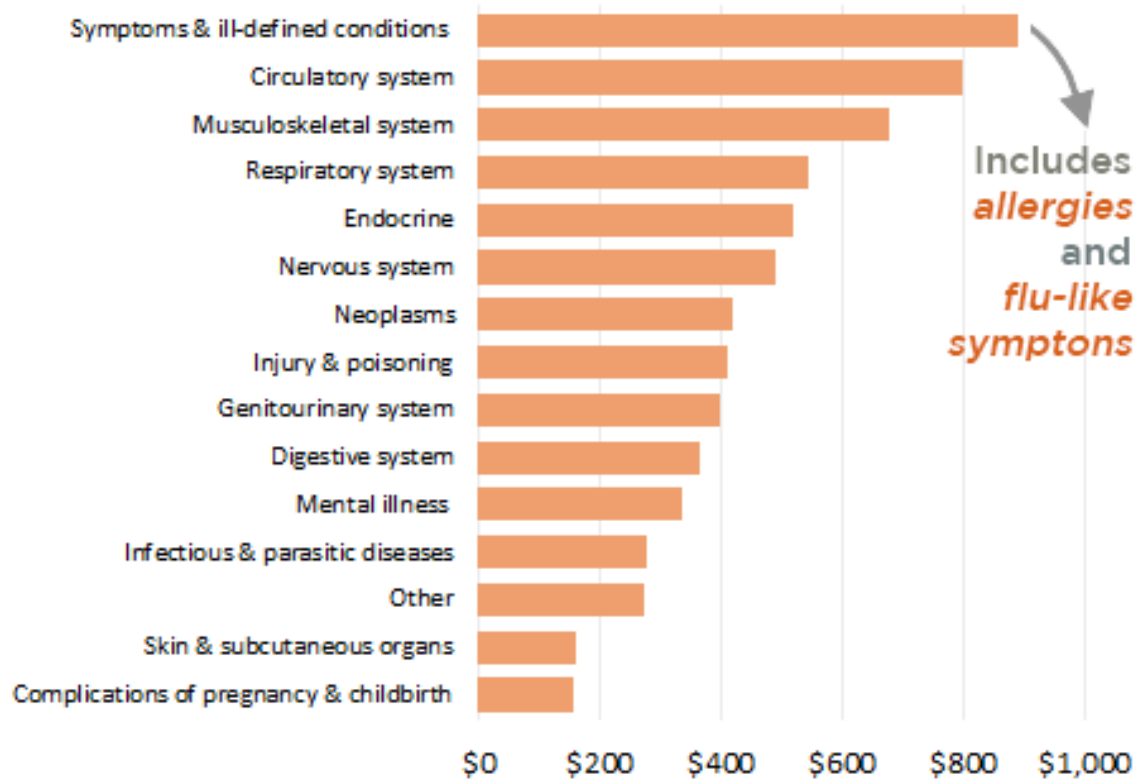

Health care accounts for
more than 14%
of the U.S. economy

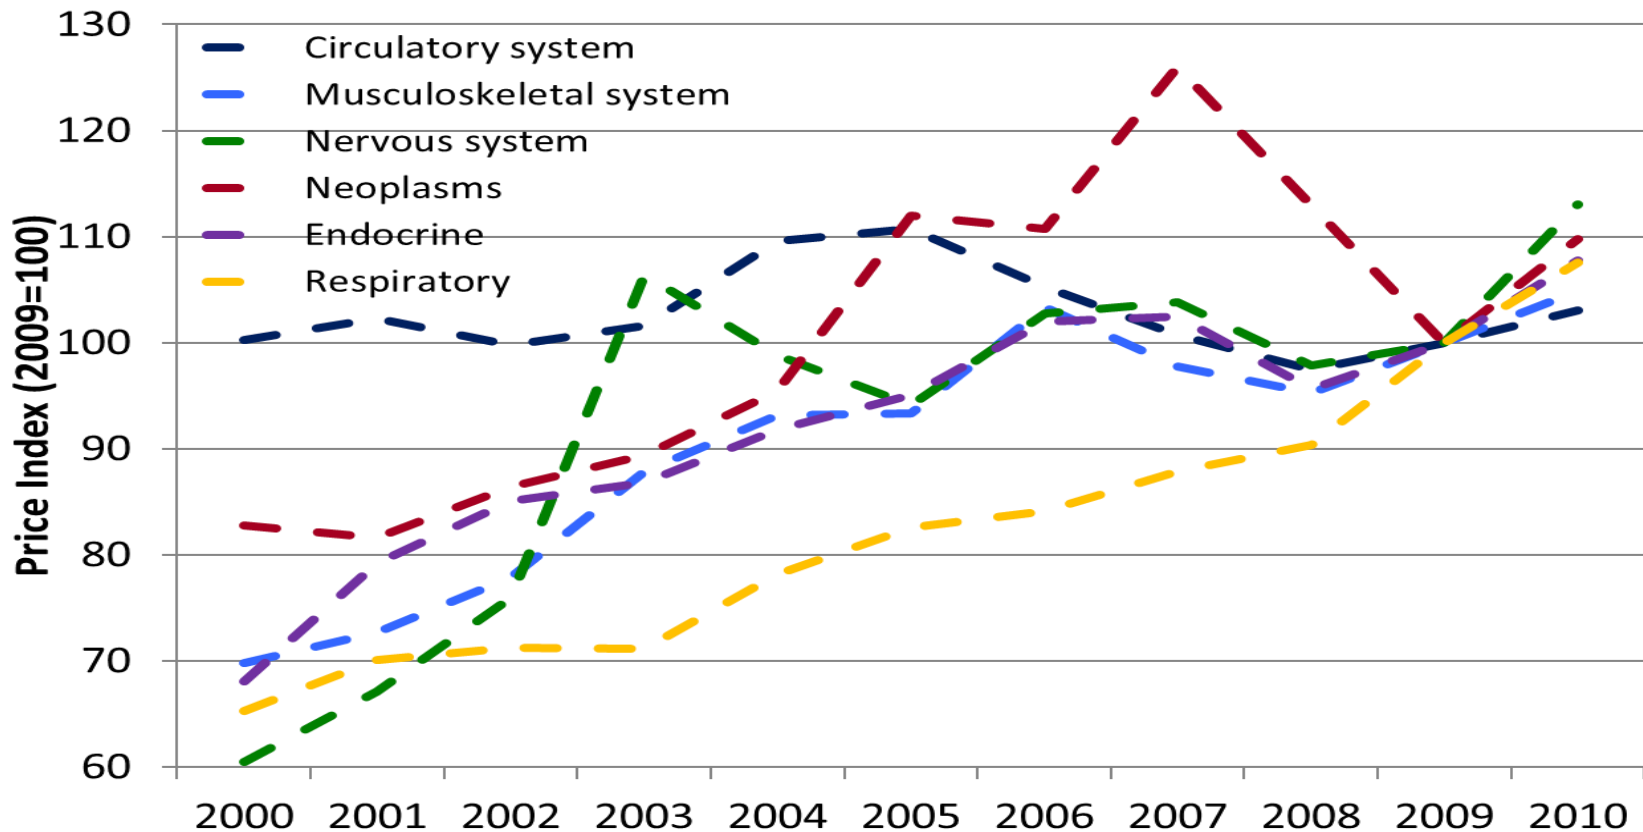

U.S. consumers spent
\$2.1 trillion in 2015
on medical services for
diseases and conditions

Per Capita Spending in 2015

Distribution of Income

- Going beyond GDP
 - What do topline numbers like GDP and Personal Income mean for well-being of individuals at different income levels?
 - Top priority—heightened attention from U.S. government officials echoes demands from academic and policy communities
- Major challenges
 - Deciding on concept of income (money income vs. national accounts' concept of personal income)
 - Access to timely source data with distributional breakouts

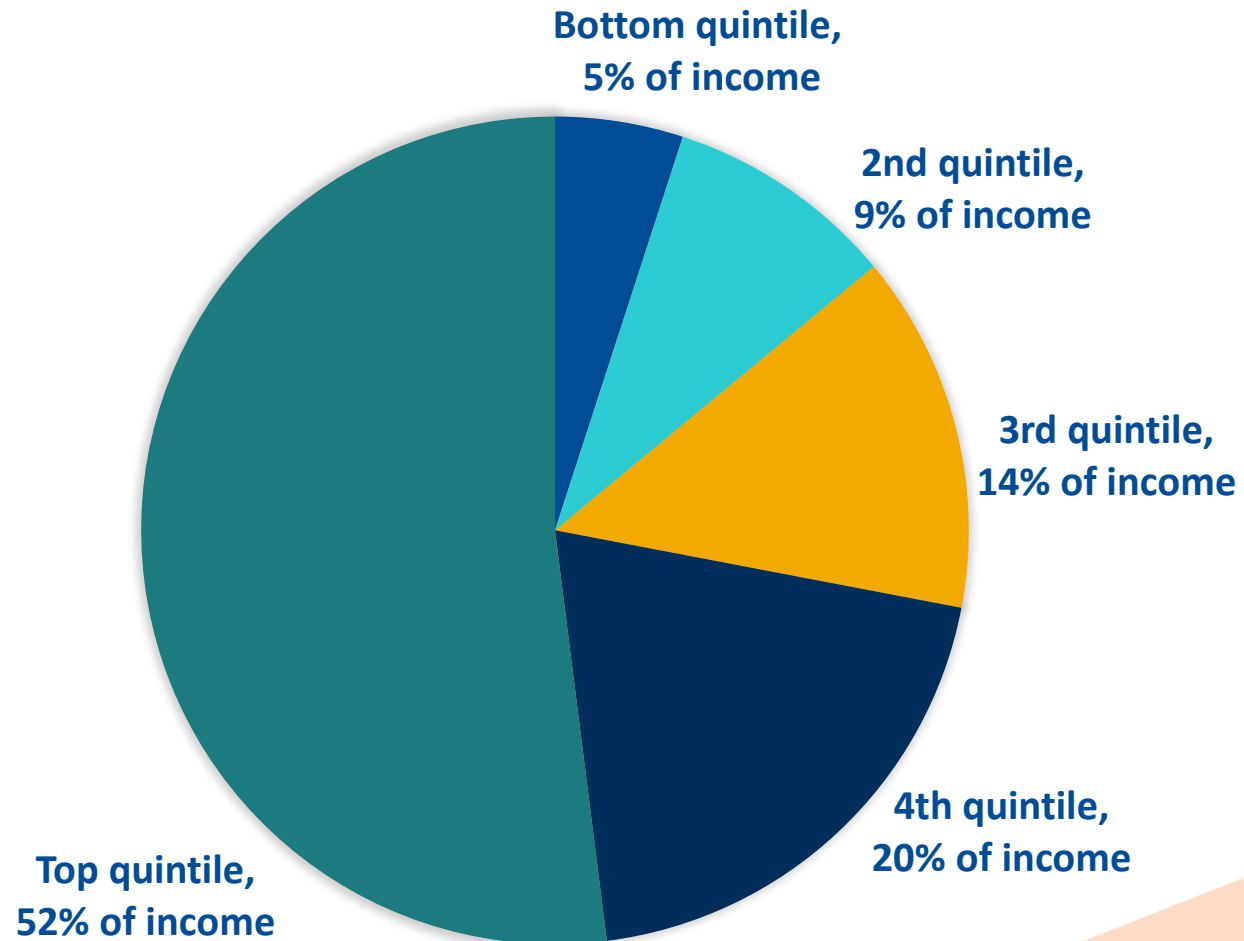

Information-sharing across different federal government agencies in ways that abide by legal constraints, including confidentiality requirements

Distribution of Income

Shares of Income by Quintile*

Shares of income by type

Bottom	Top
Compensation	
4%	51%
Proprietors' income	
1%	83%
Rental income	
5%	52%
Interest and dividends	
1%	75%
Transfers	
16%	16%

Greater Geographical Detail

- Key to evidence-based policy making
 - National statistics are not enough—long-standing commitment to provide finer levels of geographical detail
 - State and municipal decision-makers need data tailored specifically to their localities
- Major challenges
 - Traditional data sources lack detail to break out economic activity in more granular geographic areas
 - Harmonizing top-down and bottom-up estimation methods to gain greater insights from both perspectives

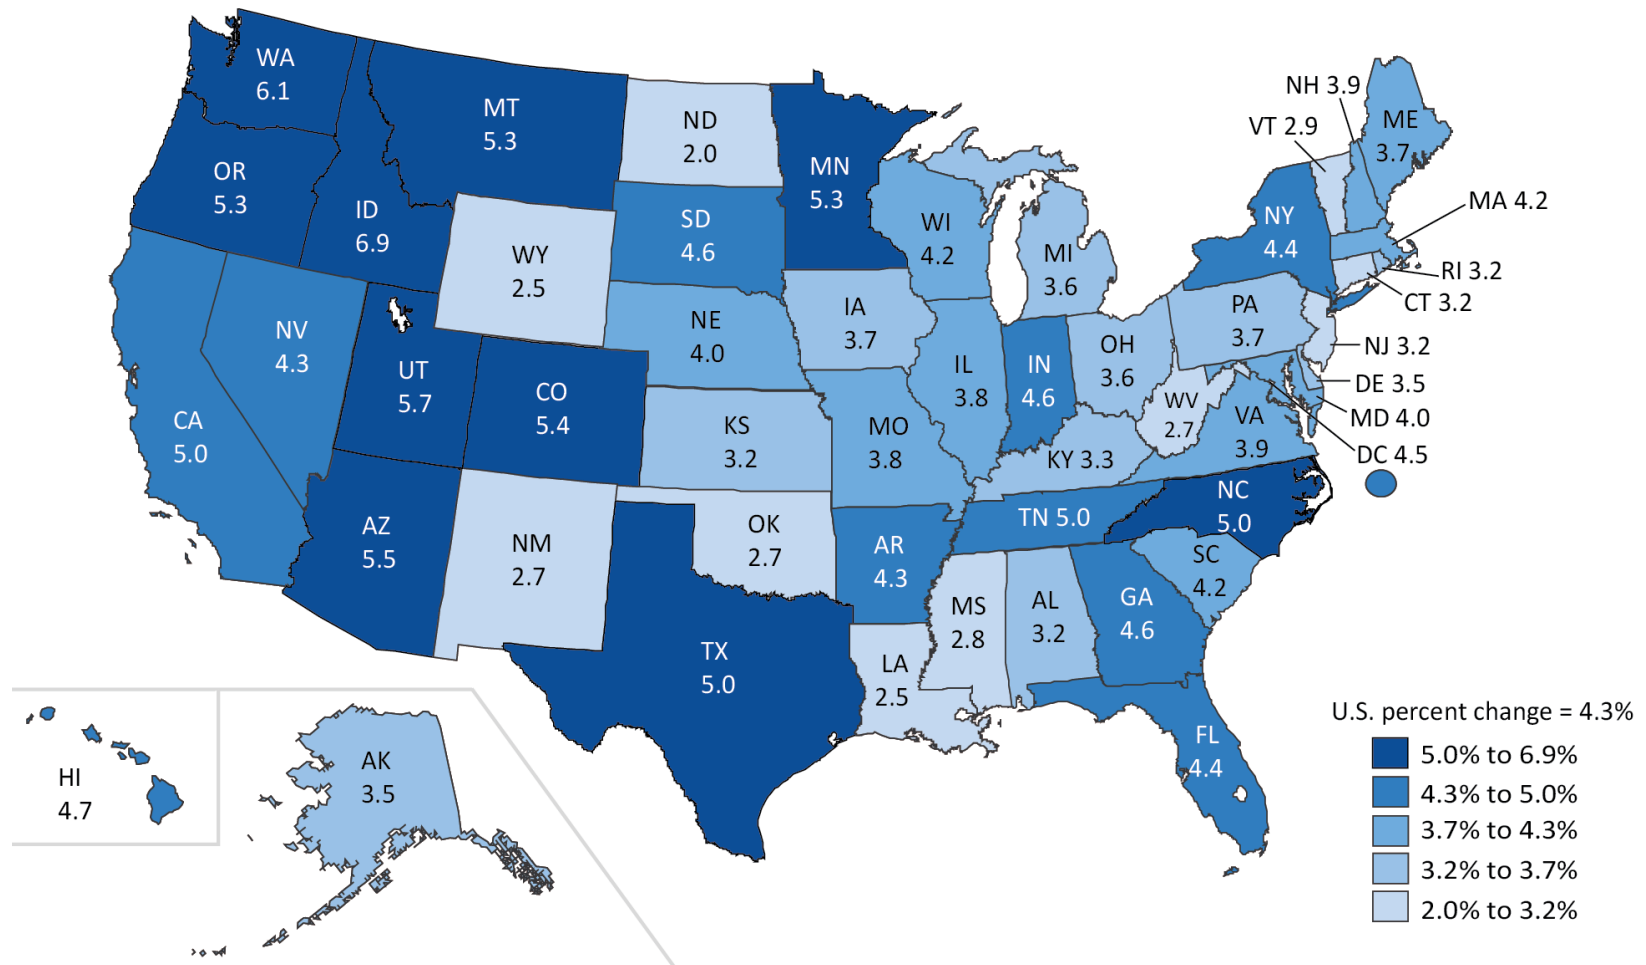

*Paradigm
Shift*

(1) Consistency between national and local area estimates and (2) input from regional-level stakeholders, including new data sources

Increasing Accuracy and Timeliness

- The trade-off
 - To make informed decisions, government officials and other policy makers need accurate data that are not subject to large revisions,
 - AND customers are demanding this information in a more timely manner.
- Major challenges
 - Earlier access to data sources from other Federal statistical agencies
 - Filling data gaps in early estimates

*Paradigm
Shift*

(1) Cutting-edge tools (machine learning, artificial intelligence) and (2) an employee base with the right skill sets to apply these tools

Increasing Accuracy and Timeliness

Timeliness: Simultaneous Quarterly Releases

Key Takeaway: Paradigm Shifts are Critical

- Statistical agencies must change the way we do business in order to fulfill user demands for more relevant, timely information
 - New forms of collaboration (e.g. public-private partnerships to access non-traditional data, partnerships with outside experts to develop new data products)
 - New estimation approaches (e.g. blending non-traditional and traditional data sources, using cutting-edge data techniques such as machine learning)
 - Public feedback mechanisms for developing new products and gaining access to new data sources
 - Recruitment of multi-disciplinary staff with mix of skill sets
