IMPACT	<p>The demand for technical assistance in the compilation of trade in services statistics is evidently strong. This is supported by, the December 2005 WTO Hong Kong Ministerial Declaration, Annex C which referred in para.10 to trade in services statistics. In particular, it states that WTO, inter alia, should provide targeted technical assistance: "... such assistance should be provided on, inter alia, compiling and analyzing statistical data on trade in services, [and] assessing interests in and gains from services trade...". The United Nations Statistical Commission in its 2010 report also "encouraged all relevant international agencies and the United Nations regional commissions, especially members of the Task Force, to contribute to the implementation of MSITS2010, and recognized the efforts of the International Monetary Fund in capacity-building with regard to balance-of-payments statistics; and recognized that training is particularly important in trade in services statistics because of its methodological complexity." Based on several requests received from the member states and different entities, the Development Statistics and Information Branch, Division on Globalization and Development Strategies, of the United Nations Conference on Trade and Development (UNCTAD) initiated discussions with partners from different international institutions on the possibility to develop a common approach in responding to these needs.</p>
