Statement to the report titled “ Linked Data considerations for geographical names standardization “ by Australia

Japan expresses its appreciation for the valuable considerations for geographical names standardization, especially focused on linked data. Japan also sympathizes with the importance of data linking which can contribute to various works.

Japan would appreciate it if we could have information regarding an efficient method to update all linked data at once, when we need to delete or modify a plurality of linked data associated with the data.

Geospatial Information Authority (GSI) of Japan
