Punjabi

The United Nations recommended system was approved in 1972 (II/11) and amended in 1977 (III/12), based on a report prepared by D. N. Sharma. The tables and their corrections were published in volume II of the conference reports^{1,2}.

There is no evidence of the use of the system either in India or in international cartographic products.

Punjabi (Panjābī) in India uses an alphasyllabic script (Gurmukhi) whereby each character represents a syllable rather than one sound. Vowels and diphthongs are marked in two ways: as independent characters (used syllable-initially) and in an abbreviated form, to denote vowels after consonants. The romanization table is unambiguous. The system is mostly reversible but there exist some ambiguities in the romanization of vowels (independent vs. abbreviated characters) and consonants (combinations with subscript consonants vs. character sequences).

Other systems of romanization

For differences between the UN system and the **ISO transliteration standard ISO 15919: 2001** see the section on the romanization of Hindi.
