

International
Energy Agency

- Energy security
- Environmental protection
- Economic growth
- Engagement worldwide

Year after year, the **International Energy Agency** works hard to remain a world reference in terms of energy statistics. Meeting the ever growing expectation from analysts, countries and from the every year larger number of users of **IEA** statistics all around the world requires continued strenuous effort. As a leading world energy statistics organisation, the **IEA** is very pleased to associate itself to the **World Statistics Day** organised by the United Nations on 20-10-2010 for “celebrating the many contributions and achievements of official statistics”.

To commemorate this important event, the **IEA** has made a triple effort to further contribute to global energy transparency:

- On 20-10-2010, the **IEA** will release an iPhone/iPad version of its flagship *Key World Energy Statistics* booklet downloadable from the IEA web site,
- On 20-10-2010, the **IEA** will update all the data available on its web statistics page with the most recent data available for the 130 countries it covers worldwide, and
- On 20-10-2010, the **IEA** will release its most recent data on *CO2 Emissions from Fuel Combustion* to feed the debate in the coming COP meeting in Cancun.

On Wednesday 20-10-2010, the **IEA** would therefore encourage everyone to have a look at its statistics web page and, of course, to download the *Key World Energy Statistics* booklet on to your iPhone or your iPad! On this notable day dedicated to statistics, the **IEA** would like to convey its outmost appreciation to all the people in charge of energy statistics in countries, companies and organizations all around the world. Without their professionalism and commitment, the quality of energy statistics would never have reached the level it has.

Please come and visit the IEA web site at: www.iea.org
