Canadian International Merchandise Trade

October 2010
How to obtain more information

For information about this product or the wide range of services and data available from Statistics Canada, visit our website at www.statcan.gc.ca, e-mail us at infostats@statcan.gc.ca, or telephone us, Monday to Friday from 8:30 a.m. to 4:30 p.m., at the following numbers:

Statistics Canada’s National Contact Centre

Toll-free telephone (Canada and the United States):
  Inquiries line 1-800-263-1136
  National telecommunications device for the hearing impaired 1-800-363-7629
  Fax line 1-877-287-4369

Local or international calls:
  Inquiries line 1-613-951-8116
  Fax line 1-613-951-0581

Depositary Services Program
  Inquiries line 1-800-635-7943
  Fax line 1-800-565-7757

To access this product

This product, Catalogue no. 65-001-X, is available free in electronic format. To obtain a single issue, visit our website at www.statcan.gc.ca and browse by “Key resource” > “Publications.”

Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable and courteous manner. To this end, Statistics Canada has developed standards of service that its employees observe. To obtain a copy of these service standards, please contact Statistics Canada toll-free at 1-800-263-1136. The service standards are also published on www.statcan.gc.ca under “About us” > “The agency” > “Providing services to Canadians.”
User information

Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0s value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- p preliminary
- r revised
- x suppressed to meet the confidentiality requirements of the Statistics Act
- E use with caution
- F too unreliable to be published

Note to users

All totals are calculated from full figures and rounded independently; consequently, totals may not equal the sum of their components.

The data is based on commodity groups (sector, subsector and major group).

Data quality, concepts and methodology

Technical notes
Canada’s merchandise exports rose 3.1% to $33.8 billion in October, on the strength of industrial goods and materials, as exports of precious metals and copper ores reached record highs. Excluding industrial goods and materials, exports declined 0.2%.

Exports of agricultural and fishing products and automotive products also grew in October. In contrast, declines were recorded in exports of machinery and equipment and energy products.

Exports volumes increased 3.0% and prices edged up 0.1% during the month.

Imports increased 1.2% to $35.5 billion, as import volumes grew 1.7% while prices decreased 0.5%. Import volumes have been on an upward trend since March 2009.

Energy products led the growth in overall imports followed by automotive products and other consumer goods. These gains were moderated by a decline in imports of industrial goods and materials.

As a result, Canada’s trade deficit with the world narrowed to $1.7 billion in October from $2.3 billion in September.

Exports to the United States increased 0.4% while imports grew 1.7%. Consequently, Canada’s trade surplus with the United States declined from $1.4 billion in September to $1.1 billion in October, the smallest trade surplus with the United States since September 1992.

Exports to countries other than the United States rose 10.1% to $10.1 billion, their highest level since November 2008 while imports increased slightly 0.3%. Thus, Canada’s trade deficit with countries other than the United States declined from $3.7 billion in September to $2.8 billion in October.

Note to readers
Merchandise trade is one component of Canada’s international balance of payments, which also includes trade in services, investment income, current transfers as well as capital and financial flows.

International merchandise trade data by country are available on both a balance of payments and a customs basis for the United States, Japan and the United Kingdom. Trade data for all other individual countries are available on a customs basis only. Balance of payments data are derived from customs data by making adjustments for characteristics such as valuation, coverage, timing and residency. These adjustments are made to conform to the concepts and definitions of the Canadian System of National Accounts.

Data in this release are on a balance of payments basis, seasonally adjusted in current dollars. Constant dollars are calculated using the Laspeyres volume formula.

Revisions
In general, merchandise trade data are revised on an ongoing basis for each month of the current year. Current year revisions are reflected in both the customs and balance of payments based data. Revisions to customs based data for the previous year are released on a quarterly basis. Revisions to balance of payments based data for the three previous years are released annually in June.

Factors influencing revisions include late receipt of import and export documentation, incorrect information on customs forms, replacement of estimates with actual figures, changes in classification of merchandise based on more current information, and changes to seasonal adjustment factors.

Revised data are available in the appropriate CANSIM tables.

Statistics Canada – Catalogue no. 65-001-X

**Analysis**

**Metals and metals ores lead the growth in exports**

Exports of industrial goods and materials rose 13.7% to $8.9 billion, their highest level since November 2008. Volumes accounted for almost two-thirds of the gain. Metals and alloys increased 17.8% as exports of precious metals reached a record high of $1.6 billion in October. Metal ores grew 48.9% led by record exports of copper ores. Other ores, namely precious metals in ores, and nickel ores also contributed to the growth in the sector.

Exports of agricultural and fishing products increased 7.5% to $3.2 billion, their highest level since June 2009. The growth mainly resulted from a 5.8% rise in volumes. Exports of other crude vegetables namely soya beans posted solid gains during the month.

After four months of decline, exports of automotive products increased 3.5% to $4.9 billion, as a result of higher volumes. Exports of passenger autos rose 2.0%, following a decrease of 11.0% in the previous month. Trucks and other motor vehicles increased, mainly reflecting higher exports of snowmobiles.

In contrast, exports of machinery and equipment fell 2.5% to $6.6 billion, as volumes decreased. The decline was a result of a 24.2% decrease in exports of aircraft, engines and parts.

Energy products exports decreased 2.6% to $6.4 billion, as prices fell 8.8% while volumes grew. Lower exports of natural gas were the main factor behind the decline, reflecting a drop in prices. Exports of crude petroleum rose 2.8% and moderated the decrease in the sector.

**Higher volumes of energy products boost imports**

Imports of energy products rose 8.3% to $3.4 billion, as volumes increased 8.5%. Imports of petroleum and coal products accounted for the increase in the sector reflecting higher imports of motor gasoline. Imports of crude petroleum, down 4.7%, declined for a second consecutive month.

Imports of automotive products grew 1.5% to $5.6 billion, a result of higher volumes. After four months of decline, imports of motor vehicle parts rose 2.9% and accounted for over three quarters of the gain in the sector. Imports of trucks and other motor vehicles also increased, reflecting the demand for full size pick ups.

Other consumer goods imports increased 1.2% to $5.0 billion, as volumes grew 2.7%. Imports of miscellaneous consumer goods which includes diverse items such as photographic goods and house furnishings led the gain. Imports of apparel and footwear, up for an eighth consecutive month, also contributed to the gain in October.

Machinery and equipment imports remained relatively unchanged (+ 0.1%) at $10.1 billion, although volumes rose 0.5%. Other transportation equipment, namely ships and boats, increased during the month as new tariff relief measures came into effect in October.

Imports of industrial goods and material declined 2.6% to $7.4 billion, mainly a result of lower volumes. The decrease was led by other iron and steel products specifically casing, tubing and drill pipe used in drilling for oil and gas. Other chemicals and related products and organic chemicals including medicinal ingredients also declined.

The Canadian international merchandise trade statistical program

Introduction

The objective of this text is to provide a general overview of the Canadian International Merchandise Trade Statistical Program, with special reference to concepts and definitions. The text is intended for the general user and simplicity is emphasized. More technical details can be obtained from the International Trade Division, Statistics Canada upon request.

Conceptual framework

1. Objectives and coverage: The primary objective of the Canadian International Merchandise Trade Statistical Program is to measure the change in the stock of material resources of Canada resulting from the movement of merchandise into or out of the country. Information on imports and exports are inputs into the System of National Accounts, particularly in the balance of payments and gross domestic product, and are used in the formulation of trade and budgetary policies. Governments, importers, exporters, manufacturers and shipping companies use international merchandise trade statistics to:

• monitor import penetration and export performance,
• monitor commodity price and volume changes,
• examine transport implications.

2. Trade statistics (customs basis / balance of payments basis): Merchandise trade statistics are reported and presented on two different bases: customs basis and balance of payment basis.

When goods are imported into or exported from Canada, declarations must be filed with customs, giving such information as description and value of the goods, origin and port of clearance of commodities and mode of transport. Most of this information is required for the purposes of customs administration. Statistics developed from administrative records of customs are commonly referred to as customs-based trade statistics.

Customs-based trade statistics are more accurate at measuring imports than they are at measuring exports. This is the case because customs are typically more vigilant with respect to goods entering the country than they are with goods leaving the country.

Customs-based export statistics may understate or incorrectly portray the destination of exports. Export statistics are understated when the proper documentation is not filed with Customs. Exports are incorrectly portrayed when the country of final destination is inaccurately reported on the customs documentation. This occurs most frequently when goods are routed through an intermediary country before continuing on to their final destination.

Statistics Canada does not have a measure of undercoverage but periodically conducts reconciliation exercises with its major trading partners, excluding the United States.

On January 1, 1990, Canada entered into a memorandum of understanding with the United States concerning the exchange of import data. As a consequence, each administration is using the other’s import data to replace its own export data. Canada’s international merchandise trade statistics are, therefore, no longer derived exclusively from the administrative records of the Canada Border Services Agency, but from United States Customs records as well.
Customs-based information is adjusted to conform with the National Accounts concepts and definitions. The adjustments to derive balance of payments-based trade data include adjustments related to trade definition, valuation and timing. The principal difference between the two trade concepts is that customs-based merchandise trade statistics cover the physical movement of goods as they are reflected in customs documents while balance of payments-adjusted data are intended to cover all economic transactions that involve merchandise trade between residents and non-residents. The present document describes the concepts and processes pertaining to the customs-based trade statistics only. (For further information on balance of payments-adjusted data, see the publication Canada’s Balance of International Payments, Statistics Canada (Catalogue no. 67-001-X).

3. System of trade: Canadian trade statistics are compiled according to the general system of trade, as defined by the United Nations Statistical Office. Under this system, imports include all goods that have crossed Canada’s territorial boundary, whether for immediate consumption in Canada or for storage in bonded customs warehouses. Domestic exports include goods grown, extracted or manufactured in Canada, including goods of foreign origin that have been materially transformed in Canada. Re-exports are exports of goods of foreign origin that have not been materially transformed in Canada, including foreign goods withdrawn for export from bonded customs warehouses. Total exports are the sum of domestic exports and re-exports. Thus the general trade system, in principal, presents all goods entering the country (imports) and all goods leaving the country (exports). It differs from the special system of trade in the treatment of imported goods into bonded customs warehouses. Under the ‘special’ system, these goods are counted only if and when they are withdrawn from customs warehouses for home consumption. They are not counted in export statistics unless they have first cleared customs.

Conceptually, under the general system, the statistical frontier coincides with the geographical boundary, while under the ‘special’ system, it coincides with the customs boundary.

4. Valuation: For customs purposes, imports are recorded at values established according to the provisions of the Customs Act, which, since January 1, 1985, reflects valuation methods based on the General Agreement on Tariffs and Trade (GATT) Valuation Code System. In general, the value for duty of imported goods must be equivalent to the transaction value or the price actually paid.

To determine the transaction value of imported goods, all transportation and associated costs arising in respect of the goods being appraised prior to and at the place of direct shipment to Canada, are to be added to the price of the goods. Therefore, Canadian imports are valued Free on Board (FOB), place of direct shipment to Canada. It excludes freight and insurance costs in bringing the goods to Canada from the point of direct shipment.

Countries other than the United States, exports are, in principal, valued or recorded at the values declared on export documents, which usually reflect the transaction value, i.e., actual selling price or, in the case of a non-arm’s length transaction, the transfer price used for company accounting purposes. Canadian exports to overseas countries are valued at F.O.B. port of exit, including domestic freight charges to that point but net of discounts and allowances. As of January, 1990, Canadian exports to the U.S. are valued F.O.B. point of exit from Canada. Prior to 1990, they were valued F.O.B. place of lading net of freight charges, discounts and allowances.

5. Statistical period: The reference period is the calendar month and the calendar year. The closing of the statistical month for imports and Canadian exports to the United States is defined as the last calendar day of the month, based as closely as practicable on the date of clearance from customs.

The closing of the statistical month for exports, to countries other than the United States, is also defined as the last calendar day of the month. Those export documents that are received too late for incorporation in the current month are assigned to the month the transaction took place. If a monthly summary report from a high volume exporter is not received on time, the data are imputed for the current month and revised with the trade value in the following statistical month.

6. Trading partner attribution (country of origin/destination): Exports are attributed to the country, which is the last known destination of the goods at the time of export. Exports to the United States are attributed to the state of destination.
Imports are attributed to their country of origin, that is, the country in which the goods were grown, extracted or manufactured in accordance to the rules of origin administered by the Canada Border Services Agency. Imports from the United States are attributed to the state of origin. Prior to 1988, most imports were attributed to the country of export/consignment, with the exception of imports from Central and South America.

7. Principal trading areas: The ‘principal trading areas’ are country groupings defined as follows:

   **United States:** includes trade with Puerto Rico and the U.S. Virgin Islands

   **Japan**

   **European Union (EU):** Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden and United Kingdom

   **Other Organisation for Economic Co-operation and Development (OECD):** Australia, Canada, Iceland, Mexico, New Zealand, Norway, South Korea, Switzerland, and Turkey. (The EU countries, United States, and Japan are also members of OECD)

   **Other countries:** all countries and territories other than the United States, Japan, EU and other OECD

8. Legal framework: Import and export statistics with countries other than the United States are derived from information contained in administrative records collected by the Canada Border Services Agency under the Customs Act. Copies of these documents (or information therefrom) are sent to Statistics Canada in accordance with Section 25 of the Statistics Act. It follows that the disclosure of trade statistics is governed by both the Customs Act and the Statistics Act and is subject to the provisions of Section 17(2)(a) of the latter. Disclosure of export statistics to the United States is now governed by a memorandum of understanding that provides for the exchange of detailed import statistics between Canada and the United States.

Contact information

Questions concerning details of methods not covered by these notes should be addressed to the Marketing and Client Services Section, International Trade Division, Statistics Canada, 170 Tunney’s Pasture Driveway, Ottawa, Ontario, K1A 0T6.
