Chapter 12 Introduction and overview of data compilation within the modes of services supply statistical framework

12.1. Chapter 12 provides an introduction and an overview of data compilation within the modes of services supply framework. It first covers the information needs of data users, then provides an overview of using an integrated approach to data compilation, reviews the need for phased implementation of suggested data compilation procedures and, finally, provides an introduction to using models and estimates in data compilation, which will be further covered in chapter 17.

In this chapter:

- A. Data compilation within the modes of services supply statistical framework: issues to consider
- B. Focusing on an integrated approach
- C. Phased implementation of the recommendations on data compilation
- D. Use of models and estimates
