Rebasing the price indices of civil engineering works from 2000=100 to 2005=100. Netherlands (2011)

Statistic Netherlands publishes a total of eight series of price indices for different areas of the civil engineering. The price index of each area of civil engineering is based on price developments of required materials, equipment and labour of a project. Each of the eight series covers an area of civil engineering: Road construction; brick paving, Road construction; asphalt paving, Railways and underground railways, Bridges and tunnels, Constructions for fluids, Constructions for water projects, Site preparation works, Electrical installation works. In addition to theses a weighted index series is also published for the eight series together: 42/43 Civil engineering.
